Among a horde of 51 seal impressions discovered in the 587 B.C. destruction level of Jerusalem is one which reads, "Belonging to Gemariah ben Shaphan" (Shiloh 1984: 19–20). The identification of this individual with the Gemariah of Jeremiah 36 appears certain, which then provides striking confirmation of Gemariah's activities during Judah's last days, as well as the authority which he had to seal official documents and other records.

2. Emissary of Zedekiah to Nebuchadnezzar who helped to carry a letter from Jeremiah to the exiles (Jer 29:3—LXX 36:3). As a "son of Hilkiah," he is not to be confused with Gemariah son of Shaphan mentioned in Jer 36:10–12, 25—LXX 43:10–12, 25 (as does Thompson *Jeremiah* NICOT, 545; cf. Carroll *Jeremiah* OTL, 552). The probability that at least one if not all of Jeremiah's sympathizers, Elasah (who also carried Jeremiah's letter), Ahikam (e.g., 2 Kgs 22:12; Jer 26:24—LXX 33:24), and the other biblical Gemariah, were sons of Shaphan, the scribe of Josiah, lends force to the suggestion that this apparent friend of Jeremiah was also a son of a prominent figure associated with Shaphan and Josiah, namely, Hilkiah, Josiah's high priest (2 Kings 22). It might be, however, that the association is coincidental; the name of Gemariah's father is very common, and the name Gemariah itself, in addition to Gemariah son of Shaphan (Shiloh and Tarler 1986: 204; see above), is attested three and perhaps four times in Israelite onomastica dating to the end of the monarchy (*AI* 31:8; 38:3; Lachish 1:1; Shiloh 1985 80:19(?)) as well as among the later Elephantine papyri (Cowley *CAP* 2:2; 6:18; 8:29; 9:18; 22:2; 121; 34:5; 43:2, 11; Kraeling *BMAP* 2:15; 4:23; 10:20). Gemariah probably means "Yahweh has completed/accomplished."

**GENEALOGY, GENEALOGIES.** Genealogies are records of a person's or a group's descent from an ancestor or ancestors. Outside of Israel, genealogies appear only rarely in ancient Near Eastern literature and are attested primarily in Mesopotamian king lists and in 2d-millennium texts dealing with the political organization and

history of the Amorites. However, the OT contains about 25 genealogies of varying complexity, a fact which suggests that genealogy played an important role in Israelite life and thought.

### A. Introduction: Terminology and Use

The most frequently attested Heb equivalents of the Eng word "genealogy" are *tôledôt* and various verbs and nouns formed from the root *yâs*. The former of these is derived from the root *yâd*, "to bear," and seems to mean literally "the order in which people are born." The word is used prominently by the Priestly Writer (hereafter P) in Genesis to introduce genealogies that are intended to give the book a literary structure (Gen 5:1; 10:1; 11:10; 25:12; 36:1). Outside of Genesis *tôledôt* is used to introduce or conclude genealogies (Exod 6:16, 19; 28:10; Num 3:1; 1 Chr 5:7), although not all of the OT genealogies are set off in this way. Because of the word's associations with sequence and progression, it sometimes takes on the extended meaning "story" or "history." In this sense it can be used to introduce narrative passages that are not genealogical in form (Gen 2:4; 6:9; 11:27; 25:19; 37:2). The root *yâs* is attested only in postexilic texts, where it is most often used in verbal forms to mean "to be enrolled by genealogy," "to be recorded in a genealogy" (1 Chr 5:17; 9:1).

Genealogies are attested in the OT primarily in texts that deal with Israel's early history (Genesis, Exodus) or in literature from the postexilic period (Chronicles, Ezra-Nehemiah). This fact has led some scholars to conclude that Israel's early interest in kinship ties waned with the rise of the monarchy and was reborn only when the chaos of exile again made membership in a family and a nation an important issue. Although it is true that evidence for the use of genealogies during the monarchy is minimal, it is unlikely that they disappeared completely. Interest in family ties remained strong during the preexilic period, and in some cases old tribal ties continued to be important in spite of royal efforts to disrupt them. In addition, certain groups such as priests, scribes, craftsmen, and even the kings themselves undoubtedly preserved genealogies, and some of these records probably survived to be included in the genealogical collections of the postexilic period.

Scholars generally agree that the OT's attribution of genealogical interest to the early Israelites is not an anachronism but is rooted in the social structure of the groups that formed premonarchical Israel. The narratives that deal with this period all suggest that kinship was a major organizational principle, and for this reason genealogies, which use the idiom of kinship, became an important means of expressing all sorts of social, political, and religious relationships. Because of the persistence of genealogical thinking in Israel's later history, an understanding

of the idiom of genealogy is important for an accurate comprehension of the OT examples of the genre.

### B. The Idiom of Genealogy

In societies such as early Israel, where kinship is a basis for organizing the society, the language of genealogy, which has its origins in the need to represent actual kinship ties, is used metaphorically to express other social relationships where real kinship is not involved. In these societies genealogies, usually in oral form, are part of daily life and are known and discussed frequently by the people. The form in which a particular genealogy is related is largely determined by the purpose for which it is being recited or recorded. The genealogy's form and function are related, and this relationship must be understood if the genealogical idiom is to be interpreted correctly.

**1. Genealogical Forms.** The most common genealogical form is the one which replicates a basic nuclear family consisting of two children having the same parents. Such a genealogy will be segmented or branched (the traditional "family tree") and will show the relationship of the two children to a single parent. Genealogies of this sort have both a vertical and a horizontal dimension. Vertically, the genealogy has depth and traces the relationship between two generations. Horizontally, the genealogy has breadth and traces the relationship between siblings by relating them to a common ancestor. Segmented genealogies can theoretically be expanded beyond the nuclear family to include any number of related kin. As more distant kin are included, the depth of the genealogy will increase as the family's common ancestor recedes further into the past. However, in practice segmented genealogies rarely exceed four or five generations in depth, even when the genealogies are in written rather than in oral form (Gen 35:22-26; Num 26:5-51).

Genealogies which are not segmented are normally in linear form. Linear genealogies are simply lists of names connecting an individual to an earlier ancestor by indicating the kinship relationships that tie all of the names together. Genealogies of this sort have only a vertical dimension and are normally of limited depth, although written genealogies sometimes violate this rule (1 Chr 9:10-13). In written genealogies, in particular, the distinction between segmented and linear forms may not be absolute, and the two forms may be mixed (1 Chronicles 6).

When genealogies are reproduced either orally or in writing, they may be given as part of a larger narrative or in the form of a simple list. In the latter case they will have a form such as "X son of Y daughter of Z" or "the sons of W: X, Y, and Z." The genealogies may be given in descending order from parent to child (1 Chr 9:39-44) or in ascending order from child to parent (1 Chr 9:14-16).

All genealogies, whether oral or written, are characterized by fluidity. Where two or more versions of the same genealogy exist, it is usually possible to detect changes in the relationship of names within the genealogy or to note the deletion or addition of names. This sort of fluidity may occur because the names involved are unimportant and thus liable to be forgotten or at least to be poorly remembered. On the other hand, fluidity may be crucial for understanding the genealogies and may indicate signifi-

cant shifts in social relationships. A number of examples of genealogical fluidity can be found in the OT, but unfortunately the reasons for the phenomenon cannot always be determined. In some cases simple scribal error may be involved (1 Chr 4:39), but in others changes in the social structure may be at the root of the alterations. For example, the variants in the genealogy of Esau (Gen 36:9–14, 15–19; 1 Chr 1:35–36) may reflect the different purposes for which the genealogies were originally created, while changes within the genealogies of the 12 Israelite tribes may reflect political or geographical realignments (Gen 46:9, 12, 17; 1 Chr 7:23).

**2. Genealogical Functions.** In societies that attach great importance to kinship, genealogies have numerous functions, and the idiom of genealogy is used for a variety of purposes. In the case of segmented genealogies, their primary purpose is to express actual kinship relationships between individuals. Such relationships are important in daily life because they are the basis for regulating social interaction, marriage, and inheritance, along with other social rights and obligations. At the level of the family, both the horizontal and vertical dimensions of the genealogy are important. Horizontally, people on the same genealogical level are related to each other as equals, while vertically people are ranked hierarchically according to the level of the genealogy which they occupy. Segmented genealogies are thus both statements of equality and statements of inequality.

However, societies that value and use segmented genealogies to express family relationships tend also to use genealogies metaphorically to indicate the relationships of individuals and groups in other aspects of social life. If a genealogy can be used to relate members of an actual family, then it can also be used to express the political relationships between families that are not actually related to each other. This can be done simply through the creation of a common ancestor, who is considered the parent of all of the people living in the society. In this way, the whole political system can be conceived as one large family and described by using the idiom of genealogy. In the same way, status relationships can be expressed genealogically, and so can economic position, geographical location, or cultic position. In a given society, segmented genealogies being used for differing purposes may exhibit a great deal of variation, for the society's political, economic, and religious configurations may be quite different. In such cases the apparently conflicting genealogies are in fact accurately reflecting the way in which the society sees itself in a particular social sphere.

In contrast to the multiple functions of segmented genealogies, linear genealogies have only one: to ground a claim to power, status, rank, office, or inheritance in an earlier ancestor. Such genealogies are often used by rulers to justify their right to rule and by office-holders of all types to support their claims.

Many of these common genealogical functions have left traces in the OT genealogies, although because these genealogies have been set in new literary contexts it is not always possible to recover their original purposes accurately. The various genealogies of the 12 Israelite tribes probably go back to a time when a kinship system was the actual basis of Israel's political organization, although in

the OT tribal equality may well be more pronounced than it was in reality (Gen 29:31–30:24; 35:16–20, 22–26; 46:8–24; Num 26:5–51; 1 Chr 2:1–2). In addition to using segmented genealogies for internal purposes, the OT also preserves genealogies of other nations and uses them to relate Israel to its neighbors (Gen 10:6–7, 21–31; 22:20–24; 25:1–6, 12–20; 36). An important collection of segmented genealogies functioning religiously can be found in the various levitical and priestly genealogies that govern the relationships of the branches of the priesthood to each other and control access to priestly power (Gen 46:11; Num 26:57–62; Exod 6:16–25; 1 Chr 6:1–81; 9:10–34).

Although most of the OT genealogies are segmented, there are also examples of linear genealogies, and these too illustrate the characteristic function of this genealogical form. There are, for example, traces of royal genealogies that indicate that the kings of Judah justified their right to rule by demonstrating their connection to earlier rulers, and such genealogies may have been used in the postexilic period as well as by pretenders to the Davidic throne (1 Sam 9:1; 14:49–51; 1 Chr 2:3–17; 3:1–24; 8:29–40; Ruth 4:18–22). Other officials also seem to have used linear genealogies to justify their authority (Zeph 1:1), and they are particularly important in postexilic texts dealing with the authority of the priesthood (Ezra 2:59–63; 10:9–44; Neh 13:23–28).

### C. OT Genealogies in Context

While it is likely that many of the OT genealogies were once in oral form and exhibited the formal and functional characteristics that are common to genealogies used in living societies, it is also important to note that they are now part of a written text. This fact has important interpretive implications not only because writing has a tendency to modify somewhat the formal characteristics of oral genealogies, but also because the literary context of the OT modifies the purposes that the genealogies can serve.

**1. Genealogy and Writing.** When oral genealogies are fixed in writing, they are likely to become less fluid than they were previously. Although conflicting genealogies in the OT suggest that fluidity in written genealogies is not out of the question, writing nevertheless discourages genealogical change. In turn, when genealogies lose their ability to change, they also tend to become less useful for purposes that require such change. This fact is particularly relevant in the case of segmented genealogies, which are often used to mirror the constantly changing shape of the social structure. On the other hand, writing sometimes helps linear genealogies to function more effectively by permitting them to be longer and therefore more impressive and authoritative.

The most important contribution that writing makes to the use of genealogies is that it preserves them in fixed form so that future generations can read them, reuse them, and on occasion elaborate them. The OT contains a number of examples of this process at work. For example, in 1 Chr 1:1–2:2 the Chronicler has extracted P's genealogies from Gen 5; 10; 11:10–26; 25:1–4, 13–16; and 36:4–5, 10–14 and used them to supply a genealogical introduction to the tribal histories in 1 Chronicles 2–9, which themselves draw heavily on genealogical material

found elsewhere in the Pentateuch. The genealogies in 1 Chronicles 2–8, whether drawn from earlier biblical texts or from independent sources, have probably been even further elaborated through the insertion of military census lists and geographical records, a process which adds considerably to the text's genealogical complexity.

A prime example of genealogical elaboration of a written text can be seen in P's genealogies in Genesis 5 and 10, where the ages assigned to these early figures seem to reflect some sort of chronological speculation involving crucial dates in Israel's history: the flood, the Exodus from Egypt, the building of Solomon's temple, the Exile, and the edict of Cyrus ending the Exile. Scholars have speculated that this chronology assumes the existence of a world cycle or "Great Year" of 4,000 years, a chronological scheme found elsewhere in antiquity. Whatever the intent of the writer in the MT, chronological speculation clearly continued after the Heb text was fixed, for the figures contained in the LXX and Samaritan Pentateuch seem to reflect a different system. Also reflected in some of the genealogies is numerical speculation designed to locate an important figure in a numerically significant position, usually the seventh position. This sort of activity is particularly clear in Genesis 5, where P has reordered the genealogy from Gen 4:17–22 in order to place Enoch in the seventh slot (Gen 5:18).

**2. Genealogy and Literary Context.** Although the OT genealogies can often be interpreted in their own right, they are also sometimes used for other purposes in the context of a larger narrative. These purposes are often far removed from the genealogies' original functions and sometimes represent a literary reuse of earlier material. The clearest example of this phenomenon is P's use of the formula "these are the genealogies/generations" (*'ēleh tōlē-dōt*), which appears often at the beginning of narratives and genealogies, particularly in Genesis (Gen 2:4; 5:1; 6:9; 10:1; 11:10, 27; 25:12, 19; 36:1, 4, 9; 37:2; Num 3:1). Although scholars have often suggested that these formulas mark material extracted from an independent genealogical book, it is equally likely that they are literary markers used by P to give structure to the narrative. Taken as a whole, the formulas, and particularly the genealogies that they introduce, highlight the writer's motif of the transmission of Israel's election and blessing through genealogical inheritance from Adam through the Israelite ancestors and finally to the Israelite priesthood.

A similar reuse of genealogical material can be seen in Exod 6:14–25, where P has inserted into the narrative a portion of one of the standard versions of the Israelite tribal genealogy. The genealogical recitation stops with the descendants of Levi and is clearly intended to underline Moses' priestly heritage and thus reinforce his authority over the people, who at this point in the narrative are refusing to listen to their leader. In this case the original genealogy has been truncated in order to serve a very specific narrative function.

Finally, the large collection of genealogies in 1 Chronicles 1–9, many of which presumably had other functions in other locations, has been positioned at the beginning of the Chronicler's account of Israel's history in order to draw an inclusive picture of traditional Israel. It is to this

broad understanding of the extent of Israel that the returning exiles are connected in 1 Chronicles 9.

Just as a genealogy can take on new functions as part of a larger narrative, so also a narrative can help to interpret a traditional genealogy. In Gen 29:31–30:24 and 35:16–20 the writer presents a version of Israel's standard tribal genealogy. However, while the standard genealogy normally stresses the equality of the twelve tribes, this genealogical narrative introduces the notion of inequality by assigning Jacob's sons to their respective mothers. Reuben, Simeon, Levi, Judah, Issachar, and Zebulun are assigned to Leah, and Gad and Asher to her maid Zilpah. Joseph and later Benjamin are assigned to Rachel, and Dan and Naphtali to her maid Bilhah. In the idiom of genealogy the children of maids are clearly of lower status than the children of wives, and among the children of the wives the first-born are superior to younger children. When this genealogical information is combined with earlier narratives indicating Rachel's status as Jacob's favorite wife, then it becomes clear that the writer is presenting a version of the twelve-tribe genealogy that gives primacy to Joseph rather than to Judah, which is usually the case in later versions of the genealogy.

The various ways in which the biblical writers incorporated genealogical material into their work suggests that they understood the idiom of genealogy and were able to use it creatively throughout the biblical period, even though the social structure of Israel changed markedly during that time. This familiarity with genealogical language persisted well beyond the OT period and continued to flourish in later Jewish and Christian debates.

ROBERT R. WILSON

**GENESIS APOCRYPHON** (1QapGen). One of the first Dead Sea Scrolls from Qumran Cave 1 to be discovered and published though some of its very fragmentary columns remain unpublished. It is written in a literary form of Imperial Aramaic that is very similar to the language of Daniel. Both linguistically and paleographically it has been dated to the last century B.C. or the 1st century A.D. though it may have been composed a little earlier.

The preserved text is a rewriting of the events recorded in Genesis. The first clearly identifiable section is a description of Lamech's reaction to the news that his wife Bitenosh is pregnant (Col. 2). A number of fragments continue with the story of Noah (generally parallel to Genesis 8–9). Then follow the best preserved columns (19–22) which retell Gen 12:8 to 15:4—Abram's going down to Egypt.

Pharaoh's infatuation with Sarai, the defeat of the four kings and the promise of descendants. There are a number of events which are added to, or more detailed than, the biblical version: Abram's dream, predicting how Sarai will save his life (and in which he and his wife are symbolized by a cedar and a palm tree); a visit by three Egyptians (one named Hirkanos) to Abram and their subsequent report of Sarai's beauty to Pharaoh; an account of Abram's prayer, the affliction of the Egyptians, and their subsequent healing; and a description of the land to be inherited by Abram's descendants. Stylistically, the Apocryphon may be described as a pseudepigraphon, since events are related in the first person with the patriarchs Lamech, Noah and Abram in turn acting as narrator, though from 22.18 (MT 14:21) to the end of the published text (22.34) the narrative is in the third person. There are also a number of specific details in content which are shared with contemporary literature. Thus, the visit of the Egyptians (when they receive religious instruction from Abram) finds a parallel in Pseudo-Eupolemos. The greatest number of similarities are with *Jubilees*. Both texts, for instance, give the name of Lamech's wife as Bitenosh and specify the mountain where Noah's ark came to rest as Lubar. Nevertheless, the precise relationship between the two texts has not yet been determined. The description of Sarai's beauty is thought to be poetry, an early precursor of the Arabic *wasf* (VanderKam 1979). Some of the non-biblical parts and some of the rephrasing call to mind the later Jewish midrashic texts, but any links are tenuous.

Despite the expansions and the recasting in the first person, the biblical text is still recognizable and has been identified as "an older Palestinian type" (VanderKam 1978: 55). Also, as in 11QtgJob, there are a number of "double translations." It is possible that the Apocryphon is (or had as one of its sources) a Targum of Genesis and hence that it may be a forerunner of the Rabbinic Targumim (Kuiper 1968). However, its closest similarities are with the Peshitta and not with the medieval Targumim. One characteristic of the way in which the text has been rewritten is its anticipation of passages which occur later in the Bible. Thus a number of phrases from the later encounter with Abimelech (Genesis 20) are placed in the narrative of Sarai and Abram in Egypt (Genesis 12).

RICHARD T. WHITE

Genesis 2:4a in the Greek translation: "This is the book of the origins (*geneseōs*) of heaven and earth." The book is called Genesis in the Septuagint, whence the name came into the Vulgate and eventually into modern usage. In Jewish tradition the first word of the book serves as its name, thus the book is called *Bērešit*. The origin of the name is easier to ascertain than most other aspects of the book, which will be treated under the following headings:

- A. Text
- B. Sources
  - 1. J
  - 2. E
  - 3. P
  - 4. The Promises Writer
- C. Narrative
  - 1. The Framework: Genealogy
  - 2. The Primeval Cycle
  - 3. The Abraham Cycle
  - 4. The Jacob Cycle
  - 5. The Joseph Narrative
- D. The Patriarchs and History
- E. The Religion of the Patriarchs
- F. Ancient Near Eastern Parallels
  - 1. Cognate Parallels
  - 2. Typological Parallels

### A. Text

There are four major textual witnesses to the book of Genesis: the Masoretic text (MT), the Samaritan Pentateuch (SP), the Septuagint (LXX), and the Genesis fragments from Qumran. The latter group comprises our oldest manuscripts but only covers a small proportion of the book (McCarter 1986: 82–88; Davila 1989). In general, the MT is well preserved and reliable, but there are many individual instances where the other versions preserve superior readings (see e.g., index in Tov 1981; frequent examples in McCarter 1986; Davila 1989). An important category of textual variants is the glosses in the MT that are not attested in other major versions; this category of variants shows how the Hebrew text continued to grow even in a conservative scribal tradition (e.g., Gen 14:22: *yahweh* added to <sup>ʔ</sup>*el ʿelyōn* [not in LXX or Syr, SP has *hāʾēlōhīm*]; Gen 35:7: <sup>ʔ</sup>*el* added to *bēt-ʾel* [not in LXX, Vg, or Syr]; see Tov 1981: 307–9).

### B. Sources

Since the beginnings of source criticism of the Pentateuch in the 17th and 18th centuries there has been much controversy over the sources of Genesis. There are several competing theories today, but the long-established identification of J (the Yahwist), E (the Elohist), and P (the Priestly source) still provides the most plausible model for the composition of Genesis (Friedman 1987; see the overview of Knight 1985). To these three sources some scholars would add the Promises writer, who inserted a series of divine promises into the patriarchal stories of J + E (see below, B.4.). Other scholars would explain the growth of Genesis by a series of editorial expansions of a single source (Rendtorff 1977; Blum 1984) or as wholly composed by a single author (Whybray 1987), but these theo-

**GENESIS, BOOK OF.** Genesis is the first book of the Hebrew Bible. The name of the book is derived from

ries cannot adequately explain the evident inconsistencies in Genesis (see Emerton 1987–88).

1. **J.** The J writer was probably not the first Israelite author to write prose narratives, but adapted the prose styles of his predecessors (among whom were probably the composers of the “ark narrative,” the “history of David’s rise,” and the “court history of David,” found in slightly expanded form in 1 and 2 Samuel; see McCarter *I Samuel AB; II Samuel AB*) to his task. J retold the stories of the past, from the creation of Adam and Eve through the patriarchs, the Exodus, and beyond, in a single extended narrative. J’s style is generally very compressed, as would be necessary for such a large task. It is likely that many of these stories would have been told at much greater length in Israelite oral traditions, as some of the allusions to unknown details and variants would suggest (e.g., Cain’s wife, Gen 4:17; the “men of renown,” Gen 6:4; Rebekah’s message for Jacob to return, Gen 27:45; Jacob’s conquest of Shechem, Gen 48:22; Jacob weeping at Peniel, Hos 12:5—Eng12:4). J portrays his human protagonists as bold, complex figures who tend to choose their own destiny (e.g., the first couple, Gen 3:6), sometimes by devious means (e.g., Abraham, Gen 12:11–13; Isaac, Gen 26:7; Rebekah and Jacob, Genesis 27). J’s deity is similarly complex; he is shown changing his mind about the desirability of destroying humans (Gen 8:21–22; cf. 6:5–7) and, in a moving scene, takes ethical instruction from Abraham (Gen 18:22–33). Yahweh often has no role in the stories or intervenes only occasionally. This intermittent role of the deity is in marked contrast to the other sources of Genesis, and shows J as, in a sense, one of the least “theological” writers of the Bible, perhaps reflecting a closeness to the folk traditions of Israel.

The J composition is plausibly dated to the early monarchy and appears to reflect Judean interests (Skinner *Genesis ICC*, lvii; Friedman 1987: 61–67). The depictions of a sympathetic side of Esau (= Edom) in J (Gen 27:30–38) and E (Gen 33:4–16) are strong evidence against an exilic or post-exilic date for J (*pace* Van Seters 1975); at this later time Edom was reviled for its part in the sack of Judah (Ps 137:7; Obadiah; cf. Ezek 25:12–14; Isa 34:5–17; 63:1–6; Mal 1:2–4). For other historical indications, see D. below. See also YAHWIST (“J”) SOURCE.

2. **E.** The E source is less dominant than J or P in Genesis but has a narrative voice and technique that is often distinct (McEvenue 1975 and 1984). In E’s narratives, beginning with Abraham in Genesis 20, the human protagonists are often idealized, with their deceits and ambiguous acts explicitly justified (e.g., Abraham’s apparent lie about Sarah, Gen 20:11–12 [cf. Gen 12:12–13, J]; Abraham’s acquiescence in the expulsion of Hagar, Gen 21:10–13 [cf. Gen 16:6, J]). The human characters often voice their intentions and show strong emotions, displaying a greater “interiority” than in J (McEvenue 1984: 320–21). God’s role in the stories is much more pronounced than in J; the events and plots of the stories are often explained as the direct expression of God’s will (e.g., God’s explanation of Abimelech’s innocence, Gen 20:6; God’s remarks to Abraham about the expulsion of Ishmael, Gen 21:12–13; the narrator’s description of the plot of Genesis 22: “God tested Abraham,” Gen 22:1; the dream theophany explaining Jacob’s success in breeding sheep, Gen 31:10–12

[cf. Gen 30:32–43, J]; Joseph’s interpretation of events to his brothers: “God sent me before you to save life,” Gen 45:5 [cf. 45:7; 50:20]). E is interested in the piety and probity of his characters; a favored quality is the “fear of God” (attributed to Abraham, Gen 22:12; possibly none in Gerar, Gen 20:11; attributed to Joseph, 42:18; see Wolff 1969), and a proper note of humility is struck when Jacob and Joseph exclaim, “Can I take the place of God” (*hātaḥat ʾēlōhīm ʾānōkī/ʾānī*: Gen 30:2; 50:19).

The E source occasionally displays northern interests (Jenks 1977; Friedman 1987: 70–83) and may have been composed as an alternative text to J, though strongly influenced by J in style and length of the stories (Friedman 1987: 83–88). Others regard E as an expansion of J rather than an originally separate document (McEvenue 1984: 329–30), and some regard the E source as insufficiently proven (Rendtorff 1977: 82; Westermann 1984–86: 2. 571–72). See also ELOHIST.

3. **P.** To the P source belong two basic types of material in Genesis: narratives and genealogies. Among the narratives are whole texts, such as the creation account in Gen 1:1–2:4a, a version of the flood myth in Genesis 6–9, God’s covenant with Abraham in Genesis 17, Abraham’s purchase of the cave at Machpelah in Genesis 23, and partial narratives that are appended to J or E texts, such as Rebekah’s disgust at Esau’s marriages in Gen 27:46–28:9 and various notices of births and burials. Among the genealogical lists are extended sections, such as Genesis 5 or Gen 11:10–27, and also briefer notices that are scattered throughout the narratives. The genealogies and other chronological matter serve to structure the book as a whole. It appears that the P source is best described as a collection of independent narratives (Emerton 1988; Nicholson 1988) and as a redactional source (*CMHE*, 301–21; Tengström 1981). It may be that this implies more than one compositional phase for P, perhaps a pre-exilic P writer and an exilic P redactor (Friedman 1981: 44–132).

One of P’s chief interests is the relationship between narrative and cult: the practices of Sabbath observance and circumcision are explicitly connected with the narratives of creation (Gen 2:2–3) and God’s covenant with Abraham (Gen 17:10–14). On a more subtle level the primeval events in P anticipate the creation of the Jerusalem temple, an institution at the center of Israelite religion. The language in the P creation story anticipates the construction of the tabernacle in Exodus 35–40, which is P’s symbol for the Jerusalem temple (Weinfeld 1981; Blenkinsopp 1976: 280–86; Levenson 1988: 77–99). In addition, the chronology of the primeval events also anticipates the construction of the temple: the creation begins the first year, the emergence of the earth from the flood waters also begins a new year (Gen 8:13), the tabernacle is set up on the first of the year (Exod 40:2), all of which foreshadow the sanctification of the temple, which occurred at the (autumn) New Year festival (Blenkinsopp 1976: 283). The symbolic structure of P appears to bring the temple into a close bond with creation and the cosmic order. The interplay between myth and cult, and the explication of the sacred structure of the cosmos, joining past to present, are dominant concerns for P in Genesis. See also PRIESTLY (“P”) SOURCE.

4. **The Promises Writer.** In addition to the three major

sources of Genesis (J, E, P) and a few texts of independent provenance (Genesis 14; 49:2–27), some scholars have noted that many of God's promises to the patriarchs belong to a separate compositional stratum (Hoftijzer 1956; Westermann 1980: 95–163; Emerton 1982). There is a common diction and set of themes in the divine promises in Gen 12:2–3; 13:14–17; 18:17–19; 22:15–18; 24:7; 26:3b–5; 28:14; 32:13; and elsewhere. Many of these passages, which occur in both J and E contexts, appear to be intrusive (e.g., Gen 22:15: “the angel of Yahweh called out to Abraham a second time . . .”). The promises were apparently added to the combined JE text prior to the combination with P, since the promises in the P source are written in characteristic P language but appear to be influenced by the earlier texts (Gen 17:5–8; 28:3–4; 35:11–12). The promises of descendants, land, blessing, etc., bring to the fore some of the implicit and explicit themes of Yahweh's relationship with the patriarchs, and apparently point to the era of the Israelite monarchy as the time of fulfillment of the promises (cf. 1 Kgs 4:20). The Promises writer gives an ethical interpretation to Genesis in Yahweh's explanation of his choice of Abraham: “I have chosen him that he may command his children and his descendants to keep the way of Yahweh by doing what is right and just, so that Yahweh may bring to Abraham what he has promised him” (Gen 18:19). The promises provide a sense of structure and a commentary on the patriarchal narratives. Several of the promises are probably original to the J and E texts (Gen 12:7; 16:11; 18:10, 14; 28:15; also 15:4–5, 18 [source obscure]; see Emerton 1982: 17–23); these formed the basis for the redactional and interpretive activity of the Promises writer. It is instructive to note the differences in theme and diction between the passages from the Promises source and the earlier passages of the blessings given by Isaac (Gen 27:27–28, J) and Jacob (Gen 48:15–16, E; 49:2–27, archaic poetry).

### C. Narrative

Hermann Gunkel began the modern study of the Genesis narratives with his attention to matters of genre, literary art, and prehistory in Israelite and ancient Near Eastern traditions (*Genesis* HKAT, 1964). Concern with the first and last of these matters (“form-criticism” and “tradition-criticism”) has dominated scholarship on Genesis in the decades since (see Knight 1975), in conjunction with recurrent theological interests (e.g., von Rad *Genesis* OTL; Westermann 1984–86) and historical concerns (see D below). In recent years much attention has returned to the literary aspects of Genesis (Fokkelman 1975; Fishbane 1979; Alter 1981; Sternberg 1985). Also in recent years some have drawn on other fields such as anthropology and folklore for new perspectives on the Genesis narratives (Culley 1985: 180–89; Niditch 1987; Oden 1987; Hendel 1987b). At present there is a wide range of approaches to the Genesis narratives, though there is a regrettable tendency for each approach to be practiced in isolation from the others.

**1. The Framework: Genealogy.** Genealogies serve as a framework for Genesis on two complementary levels: redactional and conceptual. The final editor of the book (probably to be identified with the P redactor; see B.3

above) used genealogical lists as a structural framework for Genesis (*CMHE*, 301–21; Tengström 1981). The list begins in Genesis 5 with Adam's immediate line and continues in Genesis 10 and 11:10–27, and then occurs sporadically through the rest of the book, linking the various sections of narrative. The editor prefaces each of these sections with the phrase, “These are the generations of . . .” (*’elleh tôledôt . . .*), a heading that occurs ten times in Genesis. The editor essentially organized the book as a genealogical document, from the generations of heaven and earth (Gen 2:4a) to the genealogical descent of Israel's ancestors.

In addition to this redactional role in defining Genesis as a “book of generations,” the genealogies also play a conceptual role. The conceptual function of genealogy is evident throughout Genesis (see Oden 1983; McCarter 1988). The linear genealogy from Adam to Jacob serves to define Israel's relationship to its neighbors and other foreign nations (the descendants of Noah, Gen 9:25–27 and Genesis 10; Moab and Ammon, Gen 19:30–38; Ishmael, Genesis 16; Edom, Gen 25:21–34). The segmented lineage of Jacob's sons serves to define the internal relationships of Israel, clarifying the relationships among the tribes and affirming the genealogical unity that binds them together as a nation. The idiom of kinship relationships, whether real or ascribed, is a key organization principle in the type of society called a segmentary lineage system, as Israel appears to have been in the era of the tribal league (see Wilson 1984: 30–53). Derived from this social base, the genealogical structure of the Genesis narratives served to define Israelite identity as a function of the kinship relationships of their ancestors. The genealogical framework of the book thus operates as an expression of ethnic, national, and religious self-definition. Many of the narratives are explicitly concerned with the clarity of kinship relationships (e.g., the wife-sister stories, Gen 12:10–20; 20; 26:1–11; the wooing of Rebekah, Genesis 24; the rape of Dinah, Genesis 34; Judah and Tamar, Genesis 38; the elevation of Ephraim, Genesis 48). The genealogical structure is difficult to separate from the individual stories; it appears that the narratives and kinship relationships are organically related, probably reflecting a common emergence in the early centuries of Israelite society (McCarter 1988: 15–19; and D below).

**2. The Primeval Cycle.** The stories of Genesis 1–11, often misleadingly called the “primeval history” (see the criticisms of Barr 1976; Hendel 1987a: 14 n. 8), form a loose cycle of stories, organized by the idiom of genealogical descent. The stories are properly termed “myths,” that is, “sacred narratives that relate how the world and man came into their present form” (Dundes 1984: 1; cf. Oden 1987: 40–91; Müller 1972). The P sections of the primeval cycle include the creation myth of Gen 1:1–2:4a and a version of the flood in Genesis 6–9. The interplay between myth and cult in these P accounts has been mentioned above. The J section begins with the Garden of Eden and extends through the Tower of Babel.

In these myths we see more explicitly the multiple functions of traditional myth: to explore the transition from creation to the present world and to construct the categories and relationships that sustain a coherent world (see Turner 1968; Dundes 1984; O'Flaherty 1988; Blumenberg 1985). The transgressions in these myths—disobedience

(Adam and Eve), fratricide (Cain and Abel), illicit sexual union (Sons of God and Daughters of Men), generalized evil (the flood), familial taboos (curse of Canaan), excessive ambition (Tower of Babel)—serve as narrative catalysts that impel the movement toward the emergence of the present world; they provide the necessary crises for the definition of the proper relationships in the Israelite ethical system. In response to these transgressions Yahweh introduces the qualities and limitations of the present world: from an initial human state of nakedness and innocence come the familiar traits of clothing, mortality, work, the division of labor, a limited lifespan, the multiplicity of societies and languages, etc. The proper ethical relationships are established in this process: between man and woman, brother and brother, father and son, nation and nation, and running through all of these, human and God.

Many views have been advanced in recent years concerning a central theme of the primeval cycle: the increase of human sin and God's grace (von Rad *Genesis* OTL, 24; Clines 1976: 502–3; see the criticisms of Golka 1980), the variety of human sin (Westermann 1984–86: 1. 53), the diminution of the "being" (*Dasein*) of humans (Steck 1971: 544), the irresolvable duality of human and divine (Oden 1981: 30–33), and the proper limits of the human "drive for life" (Fishbane 1979: 37). It may be appropriate to avoid the search for a single meaning and to consider the mythic role of the primeval cycle as a narrative exploration and point of origins for the categories and ethical relationships of ancient Israelite religion.

**3. The Abraham Cycle.** The stories of Abraham form a loosely connected cycle organized around two central themes: Abraham's need for a child and his relationship with Yahweh. These themes concern Abraham's identity as the ancestor of Israel and the founder of Israelite religion. The first theme is sounded in Gen 11:30 with the mention that "Sarai was barren, she had no child." The second theme begins two verses later with Yahweh's command to Abraham to "Go forth" (Gen 12:1). During the course of the Abraham cycle the relationship between Yahweh and Abraham is developed in various ways, with the problem of childlessness as a recurrent theme. The stories that concern Abraham's need for an heir include: the wife-sister stories, in which Sarah's status as Abraham's wife is endangered (Gen 12:10–20, J; Gen 20:1–7, E); the stories of the birth and expulsion of Ishmael (Gen 16:1–15, J; 21:9–21, E); the covenant with Abraham (Genesis 17, P); the announcement that Sarah will bear a son (Gen 18:1–15, J); the birth and circumcision of Isaac (Gen 21:1–8, JEP); and the binding of Isaac (Gen 22:1–19, E). The passages from the Promises writer in the Abraham cycle often concern the promise of descendants; also the passage in Gen 15:1–6 (source obscure) relates the promise of a son. The story of the wooing of Rebekah continues the concern for proper descendants to the next generation (Genesis 24, J).

Yahweh's relationship with Abraham is defined in the course of the Abraham cycle as that of a personal god who grants him offspring, land, abundance, blessing, and victory in battle. Abraham argues with Yahweh (Gen 18:22–33, J) but is obedient to his command (Gen 22:1–14, E), portraying a dialectic of autonomy and obedience that runs deeply in Israelite religion (Levenson 1988: 149–53).

The Abraham cycle presents Abraham as father and religious founder; it defines Israel's claim to the promised land and its relationship with Ammon, Moab, Ishmael, and other peoples; and it depicts the religious bond between Yahweh and the children of Abraham.

**4. The Jacob Cycle.** The stories of Jacob and his family continue some of the main concerns of the Abraham cycle. The themes of the barren wife and the need for an heir recur in Gen 25:21 (Isaac and Rebekah, J) and Gen 29:31–30:24 (Jacob and Rachel, JE), but are minor concerns in comparison with the Abraham cycle. Jacob's relationship with Yahweh is also a subject of interest, particularly in the theophanies at Bethel (Gen 28:10–22, JE; 35:1–15, EP) and Penuel (Gen 32:23–33, E). The kinship with neighboring peoples, particularly Edomites and Arameans, is an important matter, as is the internal relationships among Jacob's children.

The Jacob cycle is primarily a narration of Jacob's life story and adventures, from his early career as a youthful trickster to his later identity as the eponymous ancestor of Israel (Hendel 1987b). Jacob faces a series of adversaries in the course of his career: initially Esau, later Laban, and at Penuel he contends with God. He prevails over his adversaries, both human and divine (as emphasized in Gen 32:29), generally through guile, and thereby wins the family birthright (Gen 25:29–34, J), the blessing of the first-born (Genesis 27, J), abundant flocks (Gen 30:25–31:8, JE), and finally a new name (Gen 32:27–29, E).

Jacob's character is defined through his encounters with adversaries (Hendel 1987b: 101–31). His adversarial relationship with his brother Esau is echoed in Rachel's rivalry with her sister Leah. Rachel, the younger child who becomes Jacob's favored wife, acquires the family gods by deceiving her father (Gen 31:19, 33–35, E), establishing her as a proper counterpart for Jacob, who acquired his father's blessing through deceit (Gen 27:1–29, J; see Hendel 1987b: 94–98). Jacob eventually resolves his relationships with his adversaries: first with Laban (Gen 31:43–54, E), then, curiously, with God (Gen 32:23–33, E), and finally with Esau (Gen 33:1–17, E).

The Jacob cycle traces Jacob's identity in its various aspects: as a trickster, a founder of cult places, a man of blessing, a husband and father, a contender with God, and an eponymous ancestor. Jacob's struggles and the eventual outcome—that he prevails (Gen 32:29)—form an evocative paradigm for Israelite identity.

**5. The Joseph Narrative.** The stories of Joseph have a different narrative pace than the other stories in Genesis; they linger on individual scenes and flow more directly from one episode to another. This is less a story cycle than a single narrative, though the difference may be one of degree rather than kind. Another difference concerns the absence of theophanies and links with cultic sites. It appears that the Joseph narrative continues the J, E, and P sources, though the differences between J and E are less distinct than in previous sections (compare Skinner *Genesis* ICC, 438–42; Redford 1970: 106–86; Schmitt 1980; Westermann 1984–86: 3. 20–22).

Joseph is not presented as a cult founder or patriarch (except as father of Ephraim and Manasseh), but as the favored son of Jacob who ascends to authority over his brothers, as foretold in his dreams (Gen 37:5–11). The

ascent of the youngest is a common theme in Israelite traditions (cf. Isaac over Ishmael, Jacob over Esau, Rachel over Leah, Ephraim over Manasseh, Gideon, David). The Joseph narrative traces the rise of this eponymous ancestor and provides a transition to the stories of the Exodus. Joseph's rise is told through a series of encounters with adversaries and benefactors, after each of which he experiences a change in status. Joseph begins as his father's favorite son and attracts the enmity of his brothers. His first transition, from beloved son to foreign slave, occurs after he is cast into a pit and his special garment taken away. As a slave he is the favorite of Potiphar but attracts the desire of Potiphar's wife. His identity is transformed from slave to prisoner as he is cast into prison, again with his garment torn away by his adversary. The repeated images of Joseph's clothing torn away present a series of symbolic "rites of passage" from one state to another, from beloved son to foreign slave to prisoner. After the cup-bearer remembers Joseph's wisdom to Pharaoh, Joseph is released from prison and is dressed in new clothes (Gen 41:14), signaling a new ascent in identity. His success in interpreting Pharaoh's dreams is rewarded by a final ascent in status to Pharaoh's vizier, and is symbolically enacted when Pharaoh has Joseph dressed in fine clothes and jewelry (Gen 41:42). Joseph's rise is followed by his reunion and eventual reconciliation with his brothers. Yet before this occurs Joseph deceives his brothers, as Jacob had deceived his brother (Friedman 1986: 28–30; Niditch 1987: 99–104), and he implicitly threatens the life of the youngest son, Benjamin, by having a divining cup planted in his bag. In a moment of sharp irony, the brothers tear their clothes in anguish over the danger posed to their youngest brother (Gen 44:13), recalling the scene when Israel tore his clothes after the report of Joseph's death (Gen 37:34). Joseph then reveals his identity to his brothers and effects a reconciliation, symbolized in part by giving his brothers new clothes (Gen 45:22). The transformations that occur in the relationships of Joseph, his brothers, and the other major characters, are often accompanied by the granting, taking away, or tearing of clothing, providing a symbolic framework to the narrative. The key scenes in the story are also linked together by the themes of recognition, disguise, and knowledge, as Alter and others have noted (Alter 1981: 159–76; Sternberg 1985: 285–308). The end of the narrative, according to the E source, fulfills God's design: that the lives of the Israelites be saved (Gen 45:5–8; 50:20).

#### D. The Patriarchs and History

The topic of the relationship between history and the patriarchal narratives has been of much interest in recent years (e.g., Van Seters 1975; Thompson 1974; de Pury 1978; de Vaux 1978: 161–266; Dever 1977; Worschech 1983; Malamat *WLSGF* 303–13; McCarter 1988). The confidence of Albright and his colleagues that the "patriarchal period" could be located in the archaeological record of the second millennium B.C.E. has waned in the light of recent criticisms, and research into the historical memory of oral narrative traditions has tempered earlier claims (Culley 1967). If the writers of Genesis were drawing on the oral narrative traditions of their times, as is the most plausible scenario (see F below), then we would expect

these traditions to preserve a variety of old historical details—social, economic, and religious customs, names and epithets, vague traces of particular events—but would expect many of the themes and plots to be traditional rather than historical (Vansina 1985; Lord 1972; Finnegan 1970). We would expect most of the historical referents to reflect the times when the stories were told, not the times that they purport to describe. From the limited historical data available to us, it appears that the relationship between history and tradition in the patriarchal narratives fits this general understanding of oral traditional narrative.

The Joseph narrative, though written down no earlier than the early monarchy, reflects in the tribal relationships a time when the Joseph tribes (Ephraim and Manasseh) were dominant. In the era of the Israelite tribal league, prior to the monarchy, Ephraim and Manasseh were the most populous tribes (*AIS*, 324–35) and apparently had a dominant status (cf. the tribal blessings in Gen 49:22–26, Deut 33:13–17). This story thus preserves in its plot a memory of the social relationships of the Israelite tribal league. It is possible that the elevation of Joseph to a position of authority in Egypt also preserves a vague memory of a time when men with West Semitic names ruled Egypt (the Hyksos dynasty, ca. 1670–1570 B.C.E.). The role of Reuben in the E stratum of the Joseph narrative recalls the period of early Israelite history when Reuben was still an important tribe, while the corresponding role of Judah in the J stratum reflects a time after the rise of David when Judah became a dominant power. In the Jacob cycle, the dominance of Jacob over Esau corresponds to the era of the monarchy when Edom was a vassal of Israel, ca. early 10th to mid-9th centuries B.C.E. (the reference in Gen 27:40b to a time when Edom will "break the yoke" of Israel appears to be a prose gloss added to update the poetic blessing; Gunkel *Genesis* HKAT, 314), yet Esau's name, locale, and character are independent of his identification with Edom; thus it is evident that his narrative role predates this period (Gunkel *Genesis* HKAT, xx; 1964: 23–24).

The names of the patriarchs follow normal West Semitic patterns that are found in the 2d and 1st millennia B.C.E., though the conspicuous absence of theophorous elements derived from the name "Yahweh" lends weight to the supposition that many may be genuinely archaic names. Occasional references in extrabiblical texts may directly relate to the patriarchal traditions. A local Canaanite ruler in the 18th century B.C.E. may have been named *y<sup>c</sup>qb-HR* (in Eg transliteration), and it is conceivable that he may have been the precursor of the biblical *ya<sup>c</sup>aqob*, or Jacob (Kempinski 1988: 45–47). An Egyptian document from the 15th century B.C.E. mentions a Canaanite place named "Jacob-El"; this may also be a sign of the antiquity of the Jacob tradition (*LBHG*, 163; McCarter 1988: 24). An Egyptian document from the late 10th century B.C.E. mentions a place in Judah called the "Field of Abram"; it is likely that this place-name commemorated the biblical patriarch (Breasted 1904–5; *LBHG*, 328–29; McCarter 1988: 239–40 n. 58). The names and social relationships of the Israelite tribes may also shed light on the history of the patriarchal traditions. Some of the names of Jacob's sons may have been originally geographical designations (pos-

sibly Naphtali, Asher, Ephraim, Judah, Benjamin; see McCarter 1988: 28) that were personified as the names of tribal ancestors in the narrative traditions.

In general, the ethnic configurations in the narratives and genealogies reflect relations during the tribal league or early monarchy (Mazar 1969; McCarter 1988: 18–19), which was the era of the formation of Israelite identity and, evidently, of the narrative traditions which articulated this identity. There is thus a diversity of historical reference in the patriarchal narratives. Some items, such as the practice of erecting standing stones at sacred sites (Gen 28:18, 35:14) preserve customs that are continuous from Stone Age to Israelite times (Hendel 1987b: 66–67); many social and economic customs are at home during a broad range of the 2d and 1st millennia B.C.E. (Morrison 1983; Frymer-Kensky 1981; Matthews 1981; Selman 1980); while other elements of the stories, such as the prominence of Hebron, Beer-sheba, and Jerusalem, or the ethnic and tribal relationships, reflect a time when Israel had become a nation.

### E. The Religion of the Patriarchs

Without corroborative evidence it is impossible to tell whether the patriarchs were historical individuals, and thus it is impossible to tell what their religion may have been. It is, however, possible to gain a sense of the religious beliefs and practices that are contained in the patriarchal narratives. Many of the features of patriarchal religion are ordinary traits of Israelite religion, including such religious practices and objects as altars, standing stones, animal sacrifice, circumcision, prayers, and oracles (de Vaux 1978: 282–87; Wenham 1980: 168–70). The sacred places founded by the patriarchs are local Israelite sacred places, reflecting the period before Josiah abolished the local shrines (ca. 622) and, more precisely, a time when these sites (Shechem, Bethel, Hebron, etc.) were prominent, pointing to the period of the tribal league and early monarchy (Mazar 1969: 81).

There is a notable discontinuity from the normal pattern of Israelite religion, however, in the name of the deity worshipped by the patriarchs (Alt 1929; *CMHE*, 44–75; Köckert 1988: 55–114; and, in the early poetry, Freedman 1976: 63–66, 87–98, and 1987). Both the E and P sources preserve a tradition that Yahweh did not reveal his true name to the patriarchs, but was known to them as simply “the God of Abraham, the God of Isaac, and the God of Jacob” or “the God of your fathers” (E, see Exod 3:6) or “*ʔēl šadday*” (P, see Exod 6:3). The J source does not follow this tradition and tends to call the patriarchal deity Yahweh. The nature of the titles of the patriarchal deity in Genesis lend credence to the E and P tradition of a patriarchal deity that was not yet named Yahweh (on the following, see esp. *CMHE*, 46–60 and Cross *TDOT* 1: 255–60). The titles include *ʔēl rōʔi* (Gen 16:13), *ʔēl ʿōlām* (Gen 21:33), *ʔēl ʿēlohē yiśrāʾēl* (Gen 33:20), and *ʔēl šadday*. The god of Melchizedek, king of Salem, is called *ʔēl ʿelyōn qōnē šamayim wāʾāreš* (Gen 14:19). The word *ʔēl* can be read either as a generic noun meaning “god” or as the personal name for a god named “El.” The latter meaning clearly holds for the title *ʔēl ʿēlohē yiśrāʾēl*, literally, “El, the God of Israel.” Many of the other divine titles are probably to be understood in the same way as titles of the god El: thus *ʔēl*

*ʿōlām* is probably “El, the Eternal One” or “El, the Ancient One” (or simply “the god of eternity” or “the ancient god”), *ʔēl šadday* is probably “El, the Mountain One” (cf. the Ammonite gods called *šdyn*, probably “the mountain ones” in the Ammonite inscription from Deir ʿAlla; Hackett 1984: 85–89), *ʔēl ʿelyōn qōnē šamayim wāʾāreš* is “El, the Most High, Creator of Heaven and Earth” (cf. the title “El, Creator of Earth” in Canaanite and other West Semitic texts; Miller 1980), etc. In much of the Hebrew Bible the name El is an alternate name for Yahweh, but in the tradition followed by E and P it is conceived as an earlier name than Yahweh.

The discovery of the Ugaritic tablets from the 14th century B.C.E. and other epigraphic finds has made it clear that in Canaanite religion the high god of the pantheon was named El. Many of the El epithets in Genesis are also attested of other gods in Canaanite, Phoenician, Aramaic, and Ammonite religion. It appears that the biblical tradition according to which a god named El was worshiped in the land of Israel (i.e., Canaan) prior to the settlement of the Israelite tribes is historically accurate, and that the religion of the patriarchs described in Genesis preserves at least some authentic memories of Canaanite religion (*pace* Van Seters 1980). Many of the religious features of the patriarchal narratives would be at home in Canaanite traditions. For example, there are many continuities in the relationship between El and his votaries Danel and Kirta in the Canaanite epics and El and the patriarchs in Genesis (*CMHE*, 182–83; Clifford 1973; Hendel 1987b: 33–67). However, the patriarchal narratives only preserve features of earlier religious practice and belief that are compatible with Israelite religion; thus while there are divine “messengers” (*malʾākīm*) in Genesis, there is no mention of Baal, Asherah, or other prominent Canaanite gods.

The patriarchs are monotheists (or monolatrists) and practice a form of “personal religion” in which a family enters into a close relationship with a deity, who blesses and protects the family. This type of religion is common in the ancient Near East, and appears to be a substrate of both Canaanite and Israelite religion (Albertz 1978; Vorlander 1975). The title “the God of my father” is often applied to the patron god in personal religion. This personal god has a name (*pace* Alt 1929) and is often one of the major gods of the pantheon. The religion of the patriarchs preserves memories of El as a personal god, and this religious tradition, rooted in pre-Israelite times, was apparently a precursor of Israelite religion, in which Yahweh is both a high god and a personal god.

### F. Ancient Near Eastern Parallels

There are many parallels in ancient Near Eastern literature to the narrative elements (motifs, episodes, themes, story patterns) in Genesis. Some of these parallels are sufficiently precise to indicate a genetic or historical relationship between the stories, while others may be attributed to general habits of thought or universal storytelling techniques. Often it is difficult to distinguish between these two classes of parallels, which can be termed “cognate” (i.e., genetically related) and “typological” (i.e., not genetically related). Factors such as the degree of cultural contacts and the specificity and complexity of the parallel are important to assess in order to form a proper evaluation.

In general it appears that the primary basis for cognate parallels is not a scribal relationship between individual texts but a continuity of the narrative traditions that the texts (and their audiences) presume.

**1. Cognate Parallels.** Motifs belonging to the class of cognate parallels include: the heavenly "ladder" (*sullām*) in Gen 28:12 and the heavenly "ladder" (*similtu*) in Babylonian myth (see the Sultantepe version of "Nergal and Ereshkigal," Hendel 1987b: 65); the great dragons (*hattan-ninim haggēdōlim*) in Gen 1:21 and the Ugaritic dragon *tunnānu* (Day 1985: 74); the "Sons of God" (*bēnē hā'ēlōhīm*) in Gen 6:1–4 and the Ugaritic "Sons of God," or more precisely, "Children of El" (*bn 'il*) (Hendel 1987a: 16 n. 16); the cherubim (*kērūbīm*) in Gen 3:24 and the Akkadian *kuribu* and the frequent representation of mixed-breed guardian creatures in Near Eastern art (Freedman and O'Connor *TWAT* 4:322–34); the "seven years of famine" in Gen 41:27–30 and numerous examples of this motif in Egypt, Mesopotamia, and Canaan (McCarter 1988: 26 n. 77); the "spurned wife" motif in Genesis 39 and the Egyptian "Tale of Two Brothers" (Redford 1970: 91–93; Irvin 1977: 185–88).

Some more general concepts or themes that are cognate include: the "garden of God" at the source of the rivers, including the Tigris and Euphrates, in Genesis 2–3 and the abode of Canaanite El at the source of the Tigris and Euphrates (see the Hittite myth "Elkunirsha" and the Ugaritic descriptions of El's abode at "the source of the rivers," Wallace 1985: 76–86); the creation of humans in "the image of God" (*selem 'ēlōhīm*) in Gen 1:27 and 5:1 and the Egyptian descriptions of the king (and occasionally all humanity) as the "image" of god and the Assyrian descriptions of various kings as the "image" (*šalmu*) of a god (Dion *DBSup* 10: 365–403); the lengthy lifespans of the antediluvian patriarchs in Genesis 5 and the lengthy lifespans of the antediluvian kings in Mesopotamian traditions (see the "Sumerian King List," VanderKam 1984: 23–38); the humans who have knowledge "like the gods (or: like God)" but are denied immortality in Genesis 3 and in Mesopotamian traditions (Adapa and Gilgamesh, see Westermann 1984–86: 1.272; Wallace 1985: 104–5); the creation of the universe by divine word or divine action in Genesis 1 and 2 and numerous Mesopotamian, Egyptian, and Phoenician myths (Westermann 1984–86: 1.26–47; Blanquart 1987).

Whole story patterns that are cognate include: the flood stories in Genesis 6–9 and the several Mesopotamian stories of the flood (Westermann 1984–86: 1.398–401; Wenham *Genesis 1–15* WBC, 159–66); and the birth stories of the biblical patriarchs and the Ugaritic birth stories in the Aqhat and Kirta epics (Hendel 1987b: 37–59). The parallels in the flood story extend from the general plot to specific motifs and scenes such as the wisdom and piety of the flood hero, the instructions to build an ark, the sending of birds (or the same bird) three times to determine when the waters have abated, the landing place of the ark on a mountain in Armenia or Kurdistan, the flood hero's sacrifice after departure from the ark, a symbolic reminder of the flood (the rainbow in Genesis, a necklace in Atrahasis), and the ethical reflections of the deity (or deities) after the flood. Several obscure features of the biblical flood stories are illuminated by this history of tradition reaching back to older Mesopotamian myths. Yahweh's apparently un-

motivated change of heart after Noah's sacrifice is illuminated by the Mesopotamian scene at a similar point in the myth when the flood hero offers a sacrifice and the starving gods realize that they are dependent on humans for their sustenance. Similarly, the apparent contradiction in Yahweh's decision to destroy *all* humans (Gen 6:7, J; 6:13, P) but to save Noah's family (Gen 6:8, J; 6:14, P) is clarified by the Mesopotamian tradition where there are two major gods in opposition, one of whom (Enlil) decides to destroy all humans, and another god (Enki) who determines to save the flood hero and his family. In the Israelite tradition a single god has taken on both divine roles—destroyer and savior—thus creating an inner tension in his character and a deep ambiguity in the story (cf. Petersen 1976; Müller 1985).

In the Canaanite and Israelite birth stories there is a similar story pattern and set of relationships between the childless father and his god(s). The hero (Daniel [or Danel], Kirta, Abraham, Isaac, Jacob) has a special relationship with the god (El or Yahweh/El), he appeals to the god(s), and El or Yahweh finally blesses the hero and promises him a son. The parallels in narrative themes and plot are accompanied by the common role of El or Yahweh in both narrative traditions as the patron god who bestows blessings and progeny to his favored ones (see D above). The birth stories in the patriarchal narratives appear to be later multiforms of the traditional birth stories of Canaanite epic, though with the differences one would expect in Israelite narrative: there are no prominent gods besides El/Yahweh, and the human heroes are not kings but farmers and herders (Hendel 1987b: 47–48).

The many cognate parallels between Israelite and Near Eastern texts lend credence to the theory that there existed a tradition of oral narrative in Israel that was continuous with other Near Eastern oral narrative traditions (Cross 1983; Wallace 1985; Hendel 1987b). There are some indications of cognate parallels with archaic Greek traditions as well, as in the myth of the destruction of the demigods in Gen 6:1–4 and the Greek tradition that the Trojan War was sent to destroy the mixed offspring of gods and mortal women (see Hesiod's "Catalogue of Women," Hendel 1987a: 18–20; Van Seters 1988: 4–9). The oral narrative traditions that served as the most likely source for these Near Eastern and Mediterranean parallels would have been characterized by a multiformity of stories and motifs, as one generally finds in oral narrative (Culley 1976: 1–68; Lord 1960). It is less likely that these parallels were generated primarily by textual or scribal traditions; it is possible that some Mesopotamian, Canaanite, or Egyptian literary texts were available to Israelite writers, but none have yet been found in Israelite sites, and direct textual influence is rarely discernible in biblical writings (a probable exception is the Egyptian "Instruction of Amenemope" and Prov 22:17–24:22, see McKane *Proverbs* OTL, 369–406).

**2. Typological Parallels.** Ancient Near Eastern parallels that are more likely typological than cognate include: the symbolic contrast of culture and nature in the rivalry between Jacob and Esau and in the Mesopotamian rivalry between Gilgamesh and Enkidu, the Egyptian rivalry between Horus and Seth, and the Phoenician rivalry between Hipsouranios and Ousoos (Hendel 1987b: 111–31); the

use of clothing to symbolize the *rites de passage* in the Joseph narrative (see above, C.5.) and in the Gilgamesh epic (Moran *EncRel* 5: 559); Jacob's mysterious wrestling encounter with God in Gen 32:23–33 and Gilgamesh's dream of a wrestling encounter with his patron god Shamash in the Gilgamesh epic (Hendel 1987b: 103–9). There are many typological parallels from other cultures for stories about tricksters like Jacob (Hendel 1987b: 123, 128–29; Niditch 1987: 95–118), wise heroes like Joseph (Niditch 1987: 110–14), heroes who wrestle with gods (de Pury 1979), primeval floods (Dundes 1988), and many other motifs and themes in Genesis (Frazer 1918; Gaster 1950). There are also typological parallels for the overall structure of the book of Genesis, beginning with myths of origins and extending through the lives of the ancestors, e.g., the Mayan *Popul Vuh* (Pitt-Rivers 1977: 149–50).

RONALD S. HENDEL

**GENESIS, THE NARRATIVE OF.** This entry consists of two articles surveying certain aspects of the story told in the biblical book of Genesis. The first summarizes the flow of the plot and the story line, while the second examines various literary forms that are found within the story.

### THE GENESIS NARRATIVE

The book of Genesis, or the first book of Moses, is known in Jewish tradition by its opening words in Hebrew, *bêre'shit*, "in the beginning." The name Genesis derives from the LXX heading (Gk *Genesis*). Since the middle of the 18th century the great majority of scholars have explained the formation of Genesis, as part of the Pentateuch, by means of the documentary hypothesis, deriving in large part from K. H. Graf (1815–69) and A. Kuenen (1828–92), and given its definitive formulation by J. Wellhausen (1844–1918). All three scholars built on the work of their many predecessors, the earliest of whom were R. Simon (1638–1712), J. Astruc (1684–1766), and J. G. Eichhorn (1752–1827). The Graf-Kuenen-Wellhausen hypothesis explained Genesis, and the Pentateuch, as in essence, the result of the juxtaposition of three written accounts of the origin of the human race and Israel known as the Yahwistic (J), Elohist (E), and Priestly (P) documents. Scholars have sub-divided these sources further. Wellhausen's important contribution was to date the Priestly Document to the late

exilic or postexilic period. The standard introductions to the OT by Eissfeldt (1965; see also his article in *IDB* 2: 366–80), and Fohrer (1968) provide detailed accounts of the documentary hypothesis (see also TORAH). Though many scholars still follow this hypothesis in substance, it has been subject to thorough examination and penetrating criticism by Volz and Rudolph (1933), Cassuto (1961), Engnell (1969), Schmid (1976), Rendtorff (1977, 1985), Thompson (1987), Whybray (1987).

There has been a long and massive process of formation behind the book of Genesis. It is relatively simple to discern the heavily stylized Priestly tradition and, by and large, a “Yahwistic” storyteller. It is possible to note expansions of compact, self-contained stories, places where passages have been joined together more or less skillfully, and incoherences. There are also theological comments which betray a definite religious bias. In addition, the patriarchal stories are laid down on a set of promises, which reflect to a large extent the situation of land and people between the period of maximum expansion in the early monarchy and the Exile as well as the Deuteronomic-Deuteronomistic interests. See also GENESIS, BOOK OF.

It is not known who gave to posterity the final biblical text of Genesis or when this was done, though it can scarcely have been preexilic. But this biblical text with its unity and disunity is the only definitive text that we have. It is this text that the scholar must exegete, always bearing in mind both its final form and its long period in the making.

Genesis may be divided conveniently into three parts: The primeval story, 1:1–11:26; The patriarchal story, 11:27–36:43; The Joseph story, chaps. 37–50. Though the contents of these parts are different and the types of story have their own characteristics, they are not entirely disparate. One leads into the other until, in the steady expansion of the human race in time and space under the dynamism of the creation blessing (1:28), the people that is to become Israel is in Egypt awaiting God’s saving action. The word “story” is used to describe each of the three parts rather than history because history today, though descriptions of it vary, is still much under the influence of the fathers of modern scholarly and documented history—Leopold von Ranke (1795–1886) and Theodore Mommsen (1817–1903)—and rightly so. Von Ranke aimed to present the past “wie es eigentlich gewesen,” “as it actually was”; Mommsen pored over centuries of documents relating to Roman history and law with similar interest. For the people of Israel, the book of Genesis, and the whole Pentateuch, is their tradition; this is their past, this has made them what they are, this is what happened.

A. The Primeval Story

The Priestly (P) and Yahwistic (J) accounts of the primeval period may be considered separately, at least as a preliminary step, as each is large and, for the most part, presents an easily definable block.

**1. P Source.** The creation of the universe and its inhabitants, animal and human, is followed by the blessing which is effective in time in the long genealogy of chap. 5. There is no account of sin or transgression or revolt on the part of humankind as a prelude to the flood, but merely the statement that “the earth was corrupt . . . and . . . filled with violence” (6:11). This omission makes one hesitate to describe P as a continuous document. God is in complete control of the flood and its effects (7:16; 8:1). The blessing of creation is renewed after the flood (9:1), and an assurance is given to humankind that the order and stability of the universe will remain undisturbed (9:8–17). The extension of the human race in space, stemming from the sons of Noah, is recorded in chap. 10; the progression in time of the descendants of Shem (11:10–26) leads to the father of the family which is to become Israel.

**2. J Source.** The Yahwistic account presents a series of transgressions similar in style and pattern (cf. sections 5 and 6). The man and the woman transgress in chap. 3, and the first child, Cain, son of *hā’ādām*, transgresses in chap. 4. There follows the defiance of Lamech, the father of Jabal and Jubal, the first cattle breeders and metal workers (4:23–24). The transgression of “the sons of God” (6:1–4) is a prelude to the general revolt against God that leads to the flood (6:5–8). Assurance is given after the flood that the order and stability of the universe will remain undisturbed even though the human race remains evil (8:21–22). The revolt continues when Ham dishonors his father (9:20–27), and when “the sons of *hā’ādām*” attempt to burst their limitations (11:1–9).

**3. Creation of the Universe and Its Inhabitants.** The Priestly writer begins with a statement which distinguishes between God and “not God.” “In the beginning God created the universe,” has become, as it were, the superscription of the Bible. The Hebrew word *bārā’*, create, is used 46 times in the OT, always with God as subject, never with a preposition governing the material out of which God created, and with a variety of objects such as the universe, the human race, something new and wonderful (Isa 48:6–7; 65:17), the people of Israel. “The heavens and the

earth" are the equivalent of the cosmos, for which Hebrew has no single word. The sentence in v 1 is of primary importance. It is an affirmation that God is supreme and, of course, alone to be worshipped; but the people of God fell away continually throughout its history and worshipped "not-God." Verse 2 describes "before creation." The Priestly writer speaks out of the ordered universe of his experience, in which day follows night with regularity, season follows season, plants sprout and animals breed at their proper times, and water and land have their proper place. "Before creation" is the opposite of this, namely *tôhû wâ bôhû*, "a formless waste or chaos." Darkness was over the deep.

The verse in Genesis describes "before creation" in a language and imagery stamped strongly or faintly by the language and imagery of the ancient Near East. It is "chaos" as opposed to "cosmos." One cannot speak of God creating chaos or formless pre-existent matter; this is a contradiction in terms. "God created" means God created order. This sentiment is expressed in the Isaian passage, "He (God) did not create (*bārā*?) it (the universe) a chaos (*tôhû*); he formed it to be inhabited" (Isa 45:18). The problem of *creatio ex nihilo*, creation out of nothing, is not a problem here; it became one for later generations when Hebrew and Hellenistic culture came together (cf. Wis 11:17; 2 Macc 7:28).

The great Jewish scholar of the Middle Ages, Rashi, Rabbi Solomon, Son of Isaac (d. 1105), read v 1 as a temporal subordinate clause (protasis) in the construct with v 3 (apodosis), and v 2 as a parenthesis: "When God began to create (or In the beginning of God's creating) the heaven and the earth—the earth being unformed and void, with darkness over the surface of the deep and a wind from God sweeping over the water—God said, 'Let there be light'; and there was light" (NJPSV; Orlinsky 1983: 207–9; Speiser *Genesis* AB, 12–73). The NEB joins vv 1 and 2 as protasis and apodosis and reads v 3 as an independent principal sentence: "In the beginning of creation, when God made heaven and earth, the earth was without form and void, with darkness over the face of the abyss, and a mighty wind that swept over the surface of the waters. God said." The NAB is virtually the same. In yet another view the action begins with the 3d part of v 2: "When God began to create . . . , the earth was . . . ; and the spirit of God was moving over the surface of the waters, and God said . . ." The writer, it is claimed, goes a step behind creation; v 2c is a circumstantial sentence referring to the creative breath of God which is about to become the creative word (Steck 1981: 236–37). The NIV and JB (1985, 2d ed.) retain the more familiar RSV translation reading vv 1, 2, 3 as three successive main sentences. The question cannot be resolved on grounds of syntax alone. The structure of the chapter as a whole, in particular the eight times repeated "And God said," must be brought into the discussion. The position adopted here is that "And God said" introduces each work of creation after the presentation of chaos according to a pattern.

The word of God in the formula "And God said" (vv 3, 6, 9, 11, 14, 20, 24, 26, [29]) dominates the account of the creation of the ordered universe and its inhabitants. God creates light and order, which are necessary for vegetable, animal, and human life to exist. He does this by his word.

The writer stands in the full stream of the tradition of the ANE. "The creative power of the word underlies all Mesopotamian religious literature" (Jacobsen 1976: 15). The creative word is a feature too of the Egyptian theology of Memphis (Dürr 1938; Koch 1965). The word in the ancient Near East was presented under the image of a natural and cosmic power (Dürr 1938: 21); it came from the mouth of God and was the power that creates and sustains in existence. The word of God in the Bible must be effective, just because it is God's word (Pss 33:6; 104:7–9; 147:15–20; Isa 55:10–11). It is no emanation from the divinity, but depends on God's will.

The priestly creation account follows a pattern in vv 3–25. Immediately after the formula, "And God said," followed by the command, and before any action, there is the fulfillment formula, "and it was so." The exceptions in the MT are vv 6–7, where the words follow the action of v 7 rather than the command of v 6, and vv 20–22, where "and it was so," expected at the end of v 20, does not occur at all. In the LXX, however, the fulfillment formula, "and it was so," follows the word of command immediately in each case (vv 3, 6, 9, 11, 15, 20, 24; "and there was light" in v 3, in both MT and LXX, is an equivalent). Whether the LXX imposed the fixed pattern or followed a slightly different Hebrew text, or whether there has been a slight dislocation and an omission in the MT, cannot be decided. It can be stated reasonably that there is the pattern, Word-Formula-Event. God's word effects an event that follows immediately on it and in precise accordance with what is said. There is an inner connection between God's word and the event. God's word is an event. The pattern is there in essence in vv 26–31 where God speaks, creates, blesses, assigns a function, and makes provision for the human race and the animals; the formula "and it was so" is at the end of v 30. A second formula, "And God saw that it was good" (vv 4, 8 [LXX only], 10, 12, 18, 21, 25); v 31 ("very good"), means that the ordered world with its inhabitants, human and animal, was just as it should be as it came from the word of God.

The creation of humankind (Heb *hā'ādām*), begins with the words: "And God said," (v 26), and ends with "and it was so," (v 30). "Let us make" is best understood as a plural of deliberation, though there may be an echo of the heavenly court. The word *hā'ādām* means predominantly humankind, one of the human race; its various meaning groups are all related in some way to the creaturely state of humans; *'ādām* occurs 46 times in Gen 1–11. God creates *hā'ādām* "in our image" (Heb *šelem*) and "according to our likeness" (Heb *dēmūt*) (Gen 1:26). In Gen 5:3 (also P), Adam begot a son "in his own likeness" (Heb *bidēmûtô*) and "after his image" (Heb *kešalmo*), the same words used in Gen 1:26. Just as there is something of the father in the son, and there can be communication and response between the two, so there is something of God in *hā'ādām*, and there can be communication and response between them.

The statement about creation in v 27 is best set out in rhythmic form:

So God created man (*bārā*?' *et hā'ādām*) in his own image (*šelem*),

In the image of God he created (*bārāʾ*) him,  
Male and female he created (*bārāʾ*) them.

The creation of the human race is the creation of male and female. In v 28 the blessing, in the plural, is given to "them," male and female. To bless is to bestow with the dynamism to increase. The blessing is given to humans and animals alike (v 22), and is natural to them. Both man and woman receive dominion over the world that God has created (v 28). "Dominion is not a license to caprice and tyranny but, in the best sense, a challenge to responsibility and the duty to make right prevail" (Vawter 1977: 59). *Hāʾādām* stands over God's ordered creation (Psalm 8), but with God, the creator of all, as humankind's point of reference.

"The universe (the heavens and the earth) and all its furnishing was completed" (2:1); the verse resumes 1:1. The Priestly writer now links creation formally with the seven-day week and the Israelite sabbath (2:2-3), and with the last words of v 3 echoes 1:1 once again, "because on it he rested from all the work which God created (*ʾāšer bārāʾ ʾēlohīm*) and made."

The priestly creation account carries traces of a variety of presentations of creation in the ancient Near East. Besides creation by word and act, there are traces of creation by separation (v 6), by education (v 11), and by spontaneous generation (v 20). But the priestly tradition has brought all under the creative word of God, though not at all times smoothly. There are some polemics too in the priestly account. Light is not to be identified with God (vv 3-5) as in Egypt (*ANET*, 365-66, 368); the sun and the moon (their names, *šemeš* and *yārēah* are not used) are not deities (see the warnings in Deut 4:12, 15-20; 17:3; Job 31:31-38; and the abuses, 2 Kgs 23:5-11), but are described in their functions in an ordered universe (vv 14-18); it is God, not Baal, who gives fertility through God's own blessing. These 35 verses are priestly doctrine, the fruit of centuries of careful theological reflection (von Rad *Genesis OTL*, 63).

"These are the generations (Heb *tōlēdōt*, or, this is the story) of the heavens and the earth in their being created" (2:4a). The word *tōlēdōt* means begettings, generations, genealogies; hence, story, descendants, family history. *Tōlēdōt* is used in Genesis in 2:4a (universe); 5:1 (Adam); 6:9 (Noah); 10:1 (Noah's sons); 11:10 (Shem); 11:27 (Terah); 25:12 (Ishmael); 25:19 (Isaac); 36:1, 9 (Esau); 37:2 (Jacob). This half verse (2:4a) is a link verse from the Priestly tradition. In retrospect, the ordered universe has been created; in prospect, the story of the human race, and of Israel, can run its course in the created universe (Anderson 1977: 160-62).

**4. The Garden and the Transgression (2:4b-3:24).** In the ancient Near East the story of the creation of the human race is a tradition separate from the creation of the universe. The final editor of Genesis has taken one such story, the work of the storytelling Yahwist, and put it immediately after the account of the creation of the universe. Revolt against God follows upon God's ordering of chaos. The story is not cut from whole cloth. The account of the four rivers (2:10-14) is an independent piece of geographical information; the punishments in 3:14-19 are etiological. There are the well-known themes from the

ancient Near East of the garden and the tree of life. The grammatical structure of the opening verses, 2:5-8, is similar to the structure of the opening of the Babylonian epic, *Enuma Elish*: "When YHWH-Elohim made the earth and the heavens, there was not yet . . . nor was there *ʾādām* . . . then YHWH-Elohim formed *hāʾādām*." The Babylonian epic begins: "When on high the heaven had not been named, firm ground had not been called by name . . . no reed hut . . . no marshland . . . no gods . . . then it was that the gods were formed within them" (*ANET*, 60-61). The important difference is that there is no theogony, that is, genealogy of the gods, in Genesis.

The author of 2:4b-3:24 has fashioned a unity, tying the parts together with great skill. *Hāʾādām*, dust from the earth (2:7) is to return to the source whence he came just because that is what he is (3:19); the tree of life, a symbol of immortality in the ancient Near East (2:9), must be protected against man's attempt to reach beyond himself (3:22, 24); the prohibition to eat of the tree of the knowledge of good and evil is at the center of the story (2:16-17; 3:3, 11-12); the experiences of no shame and shame are linked (2:25; 3:7); nearness to God in the garden (2:9, 15) is followed by alienation and expulsion (3:23, 24). The Yahwist has given unity to disparate traditions and motifs.

**a. Making of *hāʾādām* (2:4b-7).** The combined name, *YHWH-ʾēlohīm* (2:4a) occurs only in Gen 2-3 (in Exod 9:30 the text is uncertain). It is probably a construction of the Yahwist (or an editor) to mediate the transition from *ʾēlohīm* in chap. 1 to YHWH. Man (*hāʾādām*) from the surface dust (*ʾāpār*), of the ground (*ʾādāmā*; 2:7) is destined to return to the *ʾādāmā*, because he is *ʾāpār*; the human being is linked inexorably with the ground and is limited; because of this limitation the human being is not immortal; human destiny is from the mother's womb to the womb of mother earth. The human being is a living being (*nepēš hayyā*; 2:7) one with all other living beings (1:20, 21, 24, 30; 2:19; 9:10, 12, 25). In 9:12-14 God makes a covenant with all living beings.

**b. Rivers (2:10-14).** The author incorporates into the text a piece of vague geographical information (2:10-14), saying that the four great rivers, the Indus? (*Pšōn*), the Nile? (*Gihōn*), the Tigris (*Hiddeqel*), and the Euphrates (*Pērāt*), the sources of the earth's fertility, have their origin in the river in God's garden. Verse 10 is best rendered: "And there is a river going out from Eden to water the garden, and from there it divides into branches and becomes four (separate) streams."

**c. Prohibition (2:15-17).** The prohibition in 2:15-17 is essential to the story of chaps. 2-3 (cf. 3:3, 11-13). There is plenty for the man to eat in the garden. The prohibition does not improve a privation, but tells the man that God the creator, who possesses a will beyond the creature, requires him to live according to the creator's will. The human being is limited; the creature cannot be the creator. The prohibition implies the possibility of the opposite, namely, of the creature acting freely against the creator. The penalty is pronounced in the form of a capital offense. If or when (*bēyōm* does not mean "on the very day") you do so, then you are guilty of a capital crime (Heb *mōt tamūt* or *yāmūt*, a traditional phrase from the sanctions in the legal sections of the Pentateuch). Both stories of creation take for granted that work belongs to the nature of

*hā'ādām* who is at work before the revolt against God (1:28; 2:15).

**d. Woman (2:18–25).** The man is alone in the garden, and this is not good (2:18). It is not that *YHWH-ʿēlōhīm* forgot to create woman or that God experimented to see if the man could manage alone. Neither is it that God took a wrong track in parading the animals before the man to see if the man could find a partner among them. The man exercises his dominion over the animals by naming them; he then decides himself that there is none among them that can stand before him as his counterpart. The “deep sleep” and the removal of a rib from the man are part of the story. The counterpart is of the same stuff as the man. There is no indication that the counterpart is to be subordinate. “This is one (*zōʾt*) at last is bone of my bone and flesh of my flesh; this one (*zōʾt*) shall be called woman (*ʿiššā*) because this one (*zōʾt*) has been taken from man (*ʿiś*)” (2:23). The author repeats the forceful Hebrew demonstrative pronoun three times; it is this one, distinct from the animals, that is his equal, in whom he is reflected. “Bone of my bone” is a traditional formula of relationship (cf. Gen 29:14; Judg 9:23; 2 Sam 5:1; 19:13–14; in each case the RSV renders the Hebrew “bone” by “flesh and blood”). The word *ʿiššā*, woman, taken from *ʿiś*, man, is a name etiology. The author is expressing the complete oneness of man and woman: their physical and spiritual unity, their mutual belonging as equals, their mutual joy in each other. They are to form their own community of life (2:24), and their relationship is without embarrassment (v 25).

**e. Transgression (3:1–7).** The man and the woman are naked (Heb *ʿārūmmīm*); the serpent is *ʿārūm*, clever. The serpent is a creature of God, “the most clever of all the animals that *YHWH-ʿēlōhīm* had made” (3:1). There is the inexplicable riddle of a creature of God leading another creature of God to transgress God’s prohibition. In the modern study of folklore, a talking animal is a trait of the fairy tale or folktale (*Märchen*). The present scene is in the realm of primeval event, before time. The question is not, what does the serpent represent, but what is its function in the story? Its function is to act as antagonist to the woman in a brief dialogue. It disappears from the action as soon as it has enticed the woman to transgress, to be mentioned later as the object of God’s curse (3:14–15). The serpent was a symbol of wisdom and magic in Mesopotamia and Egypt. There was the tradition of the bronze serpent in Israel (Num 21:4–9), an object which was worshipped in the temple area and later destroyed by Hezekiah (2 Kgs 18:4). The serpent was familiar in Israel on pottery with serpent decorations on the handles, on cult-stands showing twined serpents, and on an inscribed silver cup from 2250–2000 B.C.E. (*EAEHL* 2.457–58, 477). The serpent was also a symbol of the Canaanite fertility cult, as witnessed by the thousands of cult symbols found in Palestine in the form of figurines of a naked woman with a serpent twined around her neck. Though the serpent in Genesis represents none of these, nor does it represent Satan or human desire or intellectual curiosity or a power of the underworld, nevertheless it is difficult to deny that it would evoke associations, especially with the Canaanite fertility cult, in the minds of the Israelites who listened to the story. See SERPENT (RELIGIOUS SYMBOL).

The serpent exaggerates the divine prohibition (3:2); the woman in reply limits it to the proper object, the tree of the knowledge of good and evil, but builds a fence around it, “you shall not even touch it” (3:3). The serpent’s counter is that “you (plural throughout) will be like God (or the gods) knowing good and evil” (3:4). The word *hā'ādām* has been made like God, “little less than *ʿēlōhīm* (God, the heavenly beings?)” (Ps 8:5); now he will be God. Knowledge for the Israelite was not something theoretical, on the plane of mere understanding. It was practical and experiential. The knowledge of good and evil is the knowledge of what is good and evil for *hā'ādām*, with whom these first 11 chapters are concerned. It is a knowledge that concerns humankind in community; the transgression is only completed when the man and the woman have eaten the fruit. To read the text as the seduction of the man by the woman is to read what is not in the text. The man and the woman were aiming to be masters of good and evil, to determine good and evil, to be autonomous and so to determine the course of life without reference to God.

The writer faces that unfathomable riddle which is part of the human race so long as and wherever it exists. There is in the human being that drive to transcend the self by overstepping or bursting the limits within which it is set. There is nothing wrong in the desire itself. The fruit is “good to eat and pleasing to look at.” Two normal and good reactions are described. The fruit is also “desirable so as to make one wise.” It is here that the drive to overstep the limits is introduced (Vawter 1977: 79). The relationship of the man and the woman to God is changed by the transgression; hence too their relationship to each other. They are now embarrassed (cf. 2:25). They try to take away their own shame by covering themselves with fig leaves; but they still have to hide themselves from God.

**f. Interrogation (3:8–13):** God’s call to the man: “Where are you?” is decisive for understanding the story. The man and the woman are unmasked before God, who alone can take away their guilt. The four questions (3:9–13), call up the prohibition of 2:16–17. Though the man and the woman each try to shift the responsibility, each must remain responsible for the free individual transgression. There is no interrogation of the serpent; neither its motive nor the origin of evil are explained.

**g. Etiologies (3:14–19).** These come from another source or are partly or wholly a construction of the Yahwist. In none of the three punishments is it a case of before and after. There was not a state in which the serpent moved along in a way different from crawling on its belly, in which there was painless childbirth, or when the man did not sweat at his work and thorns and thistles did not grow. The writer speaks out of his own situation in which he knows of the enmity between serpents and humans and of the burdens of life, offering an explanation of the cause, that is, an etiology.

The serpent is cursed. In v 1 the serpent is clever (Heb *ʿārūm*) above all wild creatures; in v 14 it is cursed (Heb *ʿārūr*) above all wild creatures. Neither the woman nor the man is cursed, but the ground is cursed; and the man in his work is involved in the consequences. The woman is considered as wife and mother. In the very relationships where she finds her fulfillment, her dignity, and her joy,

she also finds pain, suffering, and subordination. The writer speaks out of his own social situation.

**h. Woman's Name; God's Intervention (3:20–21).** The wife's name is *hāwuwā* (Gk *zōē*, "life" 3:20). The blessing of fertility is there. Ben Sirach reflects on the "mother of all the living":

A great anxiety has God allotted,  
and a heavy yoke to the sons of men;  
from the day one leaves his mother's womb,  
to the day he returns to the mother of all the living.  
(Sir 40:1)

God makes garments of skins for the man and the woman (3:21), a sign of his care for his creatures. He alone can take away their shame and guilt before each other and before him.

**i. Expulsion (3:22–24).** The story concludes with 3:23. It is the original punishment. From a life of intimacy with God, the man has passed into a state of alienation, and his life is forever bound to the earth. 3:22 and 3:24 are aware of the two trees of 2:9; they form another ending. 3:22 has the form of a brief divine soliloquy (cf. 1:26; 11:6, 7). The man and the woman have sought to be morally autonomous by eating from the tree of the knowledge of good and evil. Will they now reach for immortality as Gilgamesh did (ANET, 96)? But the Adapa myth says: "To him (man) he had given wisdom; eternal life he had not given him" (ANET, 101, lines 4–5). "And God expelled the man and at the east of the garden of Eden he stationed cherubim and the flickering flaming sword to guard the way to the tree of life" (3:24; Westermann 1984: 183, 174–75). The cherubim, whose human-beast-bird form varies at different epochs of Mesopotamian civilization, are to protect access to the tree of life.

**5. Synthesis (1:1–3:24).** The story of Gen 2:4b–3:24 is the story of the primeval event. It is beyond history. It is the story of humankind or Everyman. The goal is not to present an ultimate state of the human race which is different from a previous state. The man and the woman are not endowed with supernatural or preternatural powers which they lost. The story reflects on the human being, and the writer speaks again out of his experience. This is what the human being is: created, limited, weak, with that dynamic in-built drive to know, to continue the species, and to reach beyond, and hence to burst its limitations and to be independent of the creator. Such is *hā'ādām* of the writer's experience; such has *hā'ādām* been from the beginning. There is the sequence, to be repeated several times in chaps. 1–11, of limitation, transgression, punishment, saving action—or simply crime and punishment. The story is making a basic statement about the human being which no religious, philosophical, scientific, technical, or medical advance can alter: the human being is never anything else but limited and weak. The story is about the representatives of mankind in the primeval period who, for the writer and his listeners, were people in history, the first man and the first woman. It is not concerned with hereditary sin as such or with death as punishment for sin. The story must not be read or interpreted in isolation, but with the rest of chaps. 1–11 as one of several stories about *hā'ādām* that follow a definite pattern.

**6. Pattern of Transgression.** There follows on chaps. 2–3 a series of independent stories (4:1–16; 6:5–8 + 8:20–22 with 6:9–22 + 9:1–17; 11:1–9) about *hā'ādām* which have been brought together in a common pattern. *Hā'ādām* "knew" (experienced within proper union) his wife (4:1); God saw that the wickedness of *hā'ādām* was great, he was sorry that he had made *hā'ādām*, and he decided to blot out *hā'ādām* (6:5, 6, 7; the *kōl bāsār*, "all flesh," of 6:12 is the priestly equivalent; it is the human being in all its limitations); the *bēnē hā'ādām*, the sons of man (11:5) reach for the heavens (in 6:1, see below, *hā'ādām* begins to increase in number on earth). In the story of Cain and Abel, the first children in primeval time, Cain usurps God's right. God has given life (4:1) but Cain takes it; God punishes and, at the same time, protects Cain (4:15). The accusation or interrogation (4:9–12) is very like that in 3:9–13. In 6:5–8 the revolt of *hā'ādām* has reached gigantic proportions; hence the punishment is proportional (see also 6:11–13). God saves through the ark. In the Priestly account, God chooses Noah, a just man (6:9) as the instrument through which he is to exercise his saving justice. The men who build the tower (11:1–9) want to become God, or reach to God, to make a name for themselves but not for God (11:4), by means of technology. The builders, who spoke one language (11:1), did not want to be scattered (11:4). They defied God with the work of their hands and so their language was confused; they were scattered and they did not make a name for themselves. God's saving action appears in the Priestly genealogy that introduces Abraham (11:27) and in the Yahwistic introduction to the patriarchal story (12:1–3) where God's choice, Abraham, is the instrument through whom "all the families of the earth shall bless themselves." With chaps. 2–3, these three stories follow a pattern of limitation, transgression, punishment, saving action.

**7. Further Transgressions (4:23–24; 6:1–4; 9:20–27).** God has reserved vengeance to himself (4:15). Lamech, a direct descendant of Cain (4:17–18) boasts before his wives that he will take vengeance himself (4:23–24), thus usurping the place of God. The four verses which are a preface to the biblical flood story (6:1–4) are not part of the traditional flood material from Mesopotamia. Rather, the writer uses a myth or mythical fragment, probably from Canaanite sources, and adapts it to his own purpose. The myth gave an account of the origin of the giants, the *nēphīlīm* (Num 13:33; Deut 1:28), and the heroes of old, the *gibbōrīm*. The text as it stands is a "mythological torso" (Gunkel *Genesis* HKAT, lxvi). It is another story about *hā'ādām* as the introductory sentence indicates: "When *hā'ādām* began to multiply on the face of the earth" (6:1). The "sons of God (or the gods)" are clearly celestial beings (Job 1:6; 2:1; 38:7; Pss 29:1; 89:6(7); 1 Kgs 22:19). There is a mingling of the human and the divine in an attempt to grasp at immortality in some form or other. Though the story is about primeval events, that is, about the human race in general, it was told and heard in a culture which was familiar with ritual prostitution as a form of contact with the divine. But there is to be no immortality for the created human being. Yahweh intervenes (6:3); God's spirit, which gives the breath of life, will not remain in *'ādām* forever; three generations (3 × 40) shall be the length of a person's days (God's great servant and prophet,

Moses, died at 120 years, Deut 34:7). The pattern of crime and punishment is there.

The wickedness of *hā'ādām* (see 8:21 and below) continues after the flood (9:20–27). Ham, a son of Noah, dishonors his father. The brothers Shem and Japheth make amends and do not look on their father's nakedness, for nakedness, in Israel, meant a loss of human respect. Ham is cursed by his father. The names Ham and Canaan are not connected philologically, and the Hamites are not Canaanites. "Ham was the father of Canaan" (9:18b), is a phrase inserted to link a genealogy with a story and is repeated in 9:22. The story itself takes up the genealogical note of 5:29. Drunkenness was just bad manners but not a crime in Israelite society; wine was not the invention of a god, but the result of human industry and not to be feared; it was a gift of God (Ps 104:15). In Canaan, the dutiful son is the one "who takes him (his father) by the hand when he is drunk, carries him when he is sated with wine" (ANET, 150, lines 32–33). Ham was not a dutiful son.

**8. Genealogies.** The genealogies from the Yahwistic tradition (e.g. 4:1–2, 17–22, 25–26) are usually annotated and do not simply report generation and ages. Notes on the progress of civilization are added to the short genealogy in 4:20–22: Jabal was the father of those who dwell in tents and have cattle, Jubal was the father of those who play the lyre and harp, Tubal-Cain was the forger of all instruments of bronze and iron. This type of genealogy is continued in 4:25–26. In 4:26b, the writer identifies the God who is invoked in the primeval stories with YHWH, the God of Israel: "then it was begun to call on the name of YHWH."

The names in the genealogy in 4:1, 17–22, 25–26 are the same as those in the Priestly genealogy in chap. 5, though with some variations: Seth and Enoch are interchanged (4:25–26 and 5:3–5, 6–8); the order of Enoch (4:17; 5:21) and Mahalalel/Mehujael (4:18; 5:15) is reversed. Noah of 5:29 belongs to chap. 4, after Lamech, and points forward at the same time to 9:20–27.

The Priestly writer begins his genealogy with the *tōlēdôt*, "generations," formula in 5:1–3, where he resumes the language of 1:26–27—*bārā*, "he created," *zākār ūnēqēbā*, "male and female," *selem* and *dēmūt*, "image" and "likeness." In 5:4–5 he moves into a pattern which continues into the 10th generation of Noah, with modifications in the cases of Enoch (5:24) and Lamech (5:29). The enumeration of the years to the birth of the son, the name of the son, the generalizations about other sons and daughters, and further enumeration, end with the simple words "and he died" (except for Enoch, 5:24). The death of Noah, following the same pattern, is recorded after the flood in 9:29. Not even the hero of the flood is immortal. This is in contrast to the Mesopotamian flood story in which the hero Utnapishtim and his wife are enrolled among the immortals (ANET, 93, Tablet XI, lines 1–7; 95, lines 193–97). As for Enoch, he "walked with God and he was not, for God took him" (5:24). This note has given rise to an extensive intertestamental literature surrounding Enoch. The mystery of the long lifespan of the primeval patriarchs has not yet been solved (Vawter 1977: 103–9; Westermann 1984: 352–54).

The genealogy from Shem, a son of Noah, to Abraham

(11:10–26) is modeled on chap. 5 and likewise spans ten generations. It omits "and he died," which is added 8 times by the LXX. The ages of the ancestors of Abraham are high enough, though not as high as in chap. 5. The movement here is from the primeval period into the framework of history.

The genealogies are an essential part of the structure of chaps. 1–11. They portray the blessing of 1:28 and 9:1, 6 working itself out in time. They are an old and independent literary type which have their origin among nomad peoples where the basic sociological unit is the clan or family. The genealogy is the basis of origin and belonging (Johnson 1969; Wilson 1975, 1977; Westermann 1984: 6–18).

**9. Flood (6:5–9:17).** The flood story is set within the framework of the Priestly genealogy (5:1–28, 30–32, and 9:28–29). The analysis presented here supports the view that this block of material is composite in structure. The final editor has left intact the introduction and conclusion of both J and P without any interweaving of texts. The Yahwistic introduction and conclusion are linked neatly: "The Lord saw that the wickedness of man was great in the earth, and that every imagination of the thoughts of his heart was only evil continually" (6:5); *hā'ādām* is repeated three times in 6:5a; 6:6a; 6:7a. J is interpreting in 6:5b. The words are taken up in the conclusion: "I will never again curse the ground because of man, even though (*kī*, emphatic concessive) the imagination of man's heart is evil from his youth" (8:21). Then follows Yahweh's pledge that henceforth nature will run its regular course (8:22). The Yahwistic account of the flood moves directly from the divine decision to destroy creation to the entrance into the ark (7:1–5). There is no mention of the construction of the ark. The introduction ends with "Noah did all that Yahweh had commanded him" (7:5), as does the priestly introduction (6:22), though with *ʔēlohīm* instead of YHWH. The Yahwistic material in the description of the flood proper is very sparse, no more than 7:7, 10, 12, 16b, 22–23. The flood is caused simply by rain (7:12; 8:2) which fell for forty days and forty nights (7:4, 12). Noah finds out that the flood has ended and the waters have abated by experimentation. He sends out birds (8:6–12, 13b) as did Utnapishtim in the Mesopotamian epic (ANET, 95, lines 156–61).

The Priestly account of the flood moves directly from the genealogy (5:32) to the flood (6:9). The earth is corrupt and seething with revolt (6:11–12), and God decides to destroy it. God had blessed creation and seen that it was just as it should be (chap. 1). Now, with no previous mention of transgression or corruption, the whole world is corrupt. The instructions for building the ark (6:14–16) may be compared with the parallel instructions in the Mesopotamian account (ANET, 93, lines 24–31, 50–69). In the introduction, in the description of the flood itself and the abating of the waters, and in the account of the exit from the ark, P enumerates those who were saved with the animals (6:18–21; 7:13–16a; 8:1a, 15–19). There is a detailed chronological framework (7:6, 11, 24; 8:3b, 4, 5a, 5b, 13a, 14), and the flood is described as a return to primeval chaos (7:11; 8:2). The flood gates are open for 150 days. The flood and its effects last a complete solar year (7:11 and 8:15), i.e., twelve lunar months alternating

between 29 and 30 days (a 354-day year) plus eleven supplementary days. Throughout the whole account, God is in complete control. The combined account moves to a mighty crescendo: "the waters increased, and bore up the ark" (7:17); "the waters prevailed and increased greatly" (7:18); "and the waters prevailed so mightily" (7:19); "the waters prevailed above the mountains" (7:20); "all flesh died" (7:23); "and the waters prevailed upon the earth a hundred and fifty days" (7:24). There is a pause after the crescendo reaches its height, "But God remembered Noah" (8:1), followed by a decrescendo down to 8:19.

The repetitions in the narrative as a whole, with the J reference first in each case, are: the general corruption (6:5–7 and 6:11–13); the announcement of the flood (7:4 and 6:13, 17); Noah ordered to enter the ark (7:1–3 and 6:18–20); Noah obeys (7:5 and 6:22); Noah enters (7:7 and 7:13); the deluge commences (7:10 and 7:11); the waters rise and lift the ark (7:17 and 7:18); all living things die (7:22–23 and 7:21); the waters subside (8:3a and 8:1a); God's promise (8:21–22 and 9:8–17). In the J account seven pairs of clean and one pair of unclean animals enter the ark (7:2), and it just rains (7:4, 12; 8:2b). In the P account one pair of each species enter the ark (6:9–20; 7:15–16), and the windows of the firmament open and the waters under the earth burst forth (7:11; 8:2a).

In the light of this evidence, it is beyond reasonable doubt that the biblical writers knew the Mesopotamian flood story in some form. In fact, a fragment of the epic from the 15th century, written in Akkadian, was found accidentally at Megiddo.

The Priestly conclusion to the flood story (9:1–17) resumes the blessings of creation (1:22, 28), and gives an assurance that God will henceforth be faithful to his creation. It is in two parts, each framed by an *inclusio*: (1) 9:1–7: "And God blessed Noah and his sons and said to them: Be fruitful and multiply, and fill the earth" (9:1); "be fruitful and multiply and bring forth abundantly on the earth, and multiply on it" (9:7); and (2) 9:8–17: "Behold I establish my covenant with you" (9:8); "This is the sign of the covenant which I have established between me and all flesh" (9:17). In 9:1–7, living creatures, as well as vegetable matter, are put at human disposal. Blood is taboo, a tradition elaborated in Lev 17:10–14. There was an ancient belief that life resided in the pulsating blood. It is not a question of shedding blood as such, nor of the material, blood, but of blood in so far as and so long as it is the life of an animal. An ancient prohibition against eating blood has been put into the context of the concession to *hā'ādām* to eat flesh. The passage 9:5–6 is best set out in verse form:

- v 5 *the blood of your lives* I will demand  
from every living being will I demand it  
from *hā'ādām*, from each person, I will demand the  
life  
of *hā'ādām*
- v 6 who sheds the blood of *hā'ādām*  
on behalf of *hā'ādām* shall his blood be shed  
for God has made *hā'ādām* in his image.

Vengeance belongs to God. The prohibition is against clan vengeance. 9:6 does not give *hā'ādām* the right to take the life of *hā'ādām*, whom God has made in his image. As this image consists in a relationship to God (1:27), murder is a direct affront to God.

9:8–11 describes the covenant, and 9:12–17 describes the sign of the covenant. In the Hebrew text, the word *bērit* dominates the passages (9:11, 12, 13, 15, 16, 17) where it occurs 7 times. It is already there in 6:18(P). In both contexts it describes a solemn assurance by which God binds himself. There is no *quid pro quo*. The initiative and the assurance comes from God. The rainbow is the natural sign that the rain has passed; here it is the sign that destruction has passed. God binds himself to the earth (9:13), to Noah (9:15), and to all living things on earth (9:15, 16, 17). The covenant is an eternal covenant, *bērit 'ōlām* (9:16), a typical priestly expression (Gen 17:7, 13, 19; Exod 31:16; Lev 24:8; Num 18:19; 25:13). The goal of the Flood Narrative for the Priestly writer is a solemn assurance by God that he will remain faithful to his creation. The earth is to be populated anew by the descendants of the survivors of the flood (9:18).

**10. Table of Nations (10:1–32).** The table of the nations synthesizes Israel's knowledge of the inhabited world in the period of Solomon in the 10th century B.C.E., and at the same time affirms the unity of the human race and the common stem from which it springs. It is an extraordinary combination of system and lack of system. A Priestly framework embraces two largely self-contained blocks from other (J?) sources.

The Priestly writer introduces the generations, *tōlēdōt*, or descendants of the sons of Noah—the sons of Japheth (10:2–4), peoples to the north; of Ham (10:6–7), peoples to the south; of Shem (10:22–23), peoples to the east. Each list ends with a summary description of what a nation is: "These are the sons of (Japheth, Ham, Shem) in their lands, each with his own language, by their families, in their nations." The formula is virtually the same each time (10:5, 20, 31). The whole is summed up with a closing formula in 10:32. Only Japheth, Ham, and Shem are personal names, the rest being the names of peoples, countries, or regions.

The first block (10:8–19) is fitted in between 10:7 and 10:20. It elaborates on three of the names mentioned in the P list, Cush, Egypt, and Canaan. After the note on Cush's son, Nimrod (10:8–9), the list is expanded with names of lower Mesopotamian cities (or regions; 10:10), and northern Mesopotamian names (10:11–12). Misraim (Egypt) is the father of eight peoples, each with a Hebrew plural ending (10:13–14). After Canaan's firstborn, Heth, come four Canaanite peoples, Jebusites, Amorites, Gergashites, and Hivites (10:16–17a), and five Phoenician peoples, Arkites, Sinites, Arvadites, Zemanites, and Hamathites (10:17b–18a), and a geographical note on Canaan and seven of its main cities (10:18b–19).

The second block (10:24–30) follows the P list of peoples to the east. Arpachshad (10:24) may well be a people to the east, though in 11:10–13 it is a personal name, as are Shelah and Eber (11:13–15). There is a note on Peleg (10:25), though it is not known to what it refers. The sons of Joktan (10:26–30) are thirteen South Arabian names.

Jerusalem had commercial dealings with many of these groups just as it did with most of the Phoenician names.

Israel is but one of these many nations, some of which have made substantial contributions to civilization. If Israel has any claim, it is due not to herself, but to God's election (Deut 7:7–8).

**11. Statement of Genesis 1–11.** The biblical text of Gen 1:1–11:26 is Israel's statement on the universe and the human race. The statement is complete only when both contributions, the Priestly and the Yahwistic, are read together as they stand. The Priestly writer is the systematizer, the Yahwistic writer is the story-teller who recounts the wickedness of *hā'ādām* through stories. The Priestly writer presents God's ordered universe as the theater in which man and woman, made in God's image and likeness, and so with a special relationship to him, are to play out a responsible existence. He records God's blessing (1:28) working itself out in time (5:1–32; 11:10–26) and space (chap. 10). Though he knows that the earth has become corrupt in God's sight (6:11–12), he gives no account of the revolt of *hā'ādām*. However, the Yahwist does give such an account; it is his theme. The writer speaks from the world of experience, the world of revolt of *hā'ādām* against God (chaps. 2–3), of brother against brother (4:1–16), of the race against the creator (6:5–8). God states, "I will blot out *hā'ādām* whom I have created" (6:7). God's order is destroyed by the flood which God sends. The Priestly writer sees it as a return to primeval chaos (7:11; 8:2a). Both writers record a return to the stability and order of creation (8:22; 9:12–16), again effected by God. The primeval blessing is renewed (9:1, 7). But *hā'ādām* remains perverse (8:21). He continues to revolt, now by means of the work of his hands (11:1–9). But God will not abandon his creature of revolt. Such, then, is *hā'ādām*; such has *hā'ādām* always been and will always be.

## B. Patriarchal Story

The story of the patriarchs may be divided into two parts, (1) the Abraham cycle, 11:27–25:28, and (2) the Jacob-Esau cycle, 25:19–36:43. The figure of Isaac joins the two parts; he is the channel through which the promises made to Abraham (26:3, 5, 24; 28:3–4) pass on to Jacob. This division is not arbitrary, as each part begins with the *tōlēdōt* formula: "these are the descendants of Terah" (11:27) and "these are the descendants of Isaac, Abraham's son" (25:19), and each resumes a preceding genealogy. The parts are called cycles, i.e. each is a collection of individual stories or traditions about the patriarch which may have had already a certain unity, and which has now been given a final unity and stretched on a rack of promises. Neither part is a modern biography.

**1. Abraham Cycle (11:27–25:18).** These chapters present a portrait of Abraham which is definitive biblically and which has determined all subsequent Jewish and Christian understanding of Abraham up to the Enlightenment. The portraits that come from the Yahwistic or Priestly sources, or from any other sources, are not complete. They are like the preliminary sketches of Leonardo da Vinci or Michelangelo. The faces and figures from the sketches can be seen in the final picture, but they are not the complete picture. The biblical writers, Yahwist, Elohist(?), Priestly, and others, as well as the final editor, did

not work from nothing, but from material already at hand which itself had undergone a process of transmission. Each writer or editor was, in varying degrees, a receiver, a transmitter, and a contributor. The final product is not a carefully assembled jigsaw puzzle, but a loosely coherent story, put together from genealogies, lists, enumerative passages, and family stories, into and around which have been woven a variety of motifs: the complaints of childless parents; the promises of a son, of descendants, of land, of assistance; the promise in danger, and the son in danger. The final account is neither mere history, nor mere story, nor mere retrojection. It is coherent narrative in which all three elements coalesce within a theological framework.

**a. Barrenness, Promise of a Son, Fulfillment.** Gen 11:27–32 is the first introduction to the story of the patriarchs. Its purpose is to link them in retrospect with the primeval story and to outline in prospect the framework in which the story of Abraham is to be played out. Abraham the father is also Abraham the son; his father, Terah, belongs to the nations. The elements of the Priestly genealogy (vv 27a–b) lead into an itinerary (vv 31–32), and are combined with a genealogy at hand to the Yahwist (vv 27b–30), so as to form a literary unity. A typical Yahwistic note on the genealogy sounds the theme of the Abraham cycle: "Now Sarai was barren; she had no child" (11:30). There follows at once a promise of increase and direct descendants (12:1–3). The Yahwist has constructed this second introduction to the story of the patriarchs as a theological transition. To bless is to bestow the dynamism of fertility (Gen 1:27). Immediately the promise, or rather the instrument through which the promise is to be fulfilled, is put in danger (12:10–20 = 20:1–18 = 26:1–11); the repetitions of this story of "the ancestress (or promise) in danger" are best explained as the reworking of 12:10–20 by authors who, respectively, had the narratives in chap. 12 and then chapters 12 and 20 before them (Westermann 1985: 161–68; 318–29; 394–400). The tension between barrenness and fertility has been set up and is resolved only in 21:1–7, when a son is born to Abraham and Sarah. "Sarai's childlessness is the pre-condition for almost all the narratives that follow" (Gunkel *Genesis* HKAT, 162). In chap. 15 Abraham complains to God that he has no heir, but God assures him that "your own son shall be your heir" (15:4b). In 16:1, the absence of an heir, "Now Sarai, Abraham's wife, bore him no children," leads to the Hagar episode (16:1–14). In chap. 17, the Priestly writer heaps the promises together and has God repeat his assurance that Abraham and Sarah shall have their own son (17:15–21). This assurance constitutes the narrative about the visitors to Abraham's tent in 18:1–16a. The promise is put in danger again in 20:1–18, but God intervenes. Finally there is fulfillment with resolution of the tension in 21:1–7. Barrenness, the promise of a son, the absence of a son, the continual assurance, and the fulfillment constitute the Abraham cycle of the biblical text.

**b. Promise of a Son, Descendants, and Land.** The stories, accounts, reports, and episodes in chapters 15–18 are of different origins. Many scholars think that chapter 15 contains the beginning of the Elohist strand in the Pentateuch and that the editor uses this tradition as the framework into which he has fitted a corresponding Yahwistic account so as to produce a literary unity (Cazelles

1962). Others suggest that the chapter consists of two stories fashioned out of the promises, namely, the promise of a son and descendants (vv 1–6), and the promise of the land (vv 7–21). They are “fictitious narratives” (*nachgeahmte Erzählungen*, Lohfink 1967). These narratives have been edited into the present context and introduced by “And after these things,” an editorial link (cf. Gen 22:1; 22:20; 39:7; 40:1; 48:1).

In chap. 16, a Priestly framework (vv 1[a], 3, 14–16), encloses a Yahwistic narrative (vv 1[a]b–2, 4–14). Chapter 17 is not a narrative, but a literary construction of the Priestly writer, and is entirely theological. The writer reworks traditions at hand to him (12:1–3; 15; 18:1–16a), and accumulates virtually all the promise material into vv 1–22. The writer gathers together in concentrated form the essence of the Abraham story, what is in fact the central point in his conception of the patriarchal story. Hitherto he has given only genealogies and itineraries (11:27, 31–32; 12:4b–5; 13:6, 11b, 12; 16:1a, 3, 15–16). Now he gives his first detailed discourse. The key word, *bērit*, “covenant,” here solemn assurance, is used 13 times in the passage (vv 1–22), which is framed by “God appeared to Abram” (v 1), and “God went up from Abraham” (v 22); once in the introduction (v 2); 3 times in the promise (vv 3–8); 6 times in the prescription of circumcision (vv 9–14); 3 times in the promise (vv 15–21).

The passage 18:1–16a is another type of narrative in which the promise of a son is given by God under the traditional figure of the unknown traveler(s). Abraham addresses the three wayfarers as “my Lord,” *’ādōnāy* (v 3). In v 9a the phrase “they said to him” indicates that the group dialogues with Abraham. When Abraham replies in v 9b, only one of the travelers continues the dialogue, “and he said” (v 10). Then in v 13 one of the travelers is identified in the statement, “YHWH said to Abraham.” So after the meal the travelers take over the conversation affirming that a son shall be born to Abraham and Sarah within the year. The promise is again in danger in 20:1–18, but is fulfilled in 21:1–7.

**c. Other Abraham Traditions.** Three other stories about Abraham are added in chaps. 22–24, the theme of each being sounded at the beginning: “God tested Abraham” (22:1); “And Sarah died at Kiriath-arba” (23:2), and so a burial place must be found for her; “Swear . . . that you . . . will go to my country and to my kindred, and take a wife for my son Isaac” (24:3–4), so that the promise may be handed on.

The first story (22:1–19) is tied loosely to the material preceding it by the formula, “Now after these things.” A story that tells how God tested Abraham to see whether he could give back to God the promised son, freely given to Abraham, is joined with a reassurance of the promises in the language and imagery of 12:3 and 28:14, given a Deuteronomic direction with “because you have done this, and not withheld your son . . . because you have obeyed my voice” (vv 16b and 18b).

Chapters 23 and 24 are family narratives about death and marriage. The story of the purchase of the family tomb is set in a priestly frame (23:1–2, 19), and may well be the work of the priestly writer. The long narrative about the quest for a wife for Isaac is regarded by many as late, though repetitions like 24:11–14, 15–27, 42–49,

and 24:2–8 and 34–42 are common in Homer’s *Iliad* and *Odyssey*. Abraham is the chief figure in each of these stories. He is the center of chap. 22, and he initiates the action in chaps. 23 and 24. With the heir now settled in marriage (24:62–67), and with the promise of blessing assured, the Abraham cycle can close. His death, after a life of fulfillment (25:7–10[11]) is prefaced and followed by two genealogies (25:1–6; 25:12–18). Ishmael too has been blessed (17:20[P]; 21:13[J]), and his descendants are accounted for. The promises can now pass through Isaac to Jacob. (The Abraham cycle includes another tradition about Hagar and Ishmael [21:8–21], which has been joined to the account of the birth of Isaac [21:1–7].)

**d. Figure of Lot.** Lot is mentioned in the genealogy of 11:27, and as a member of the company in the itineraries of 11:31; 12:4–5; 13:1–4. A narrative about a dispute between his herdsmen and Abraham’s (13:1–12, 18; probably composite) grows out of the itinerary. After Abraham and Lot separate (13:11b), Lot settles in Sodom. The name of the city evokes another tradition about Lot, namely the destruction of Sodom and Lot’s role in it, which is anticipated here: “Now the men of Sodom were wicked, great sinners against the Lord” (13:13). The actual events are narrated in chap. 19, an account which is preceded by the dialogue between the Lord and Abraham about the punishment of the innocent with the guilty (18:22–32). This is itself preceded by a theological reflection (of the Yahwist?) in the form of a divine soliloquy which reaffirms that Abraham’s descendants will be numerous, but that they must, in Deuteronomic tradition, “keep the way of the Lord by doing righteousness and justice” (18:19b).

**e. Abraham the Warrior-Hero.** The account of Abraham, the warrior-hero, remains an enigma. There is general agreement that it cannot be assigned to either of the traditions J or P, but stands outside them. Some scholars regard it as an authentic account of a historical event, at least in substance (Speiser *Genesis* AB, 103–9). “But this text appears as an erratic block and is more a hindrance than a help to the historian” (de Vaux 1964: 240; *EHI* 216–20, 258–63). Other scholars reject the “historicity” of the chapter (Thompson 1974: 187–95; Van Seters 1975: 296–308). A full history of the interpretation of the chapter may be found in Schatz (1972). Emerton (1971a, b) and Westermann (1985: 187–208) have opened the most satisfactory approach. Verses 1–11 are a self-contained account of a campaign in annalistic style (vv 1, 4, 5, 8, 10, 11; cf. Zakir Stele, *ANET*, 501) into which an account of another campaign (vv 5b–7), and two lists (vv 1–2; 8–9) have been inserted. The account ends in v 11, and no sequence is expected. Verses 12–17 with vv 21–24 are a narrative following the pattern of the hero stories from the period of the judges (compare Gen 14:14–15 with Judg 7:16–19). A narrative from this period has been applied to Abraham so as to exalt the patriarch to the status of a hero and a savior figure. This narrative has been joined to vv 1–11 which have determined the interpretation of the whole. The section about Melchizedek (vv 18–20) forms an independent episode which breaks the continuity between vv 17 and 21; there was probably some sort of story behind them. They reflect sedentary cult in which priest and tithes have their proper place.

**2. Jacob-Esau Cycle.** The Jacob-Esau cycle is nicely

dovetailed into the Abraham cycle and continues the family story. The cycle begins with the *tôlédôt* formula: "These are the descendants of Isaac, Abraham's son" (25:19–20, 26b). The opening passage, describing the struggle of the twins in Rebekah's womb (25:21–26a), sounds the theme of the cycle, conflict and rivalry—between Jacob and Esau, Jacob and Laban, Rachel and Leah; and the following episode about the pot of red soup (25:27–34; *'ādôm*, a play on *'dm*, "red"; hence the descendants of Esau are the Edomites, "the red ones"), sketches with a couple of strokes the broad outline of the type to which each twin belongs. The Jacob-Esau cycle draws on several blocks of tradition. Two of the blocks, Jacob and Esau-Edom (26:29–34; 27:32–33) and Jacob-Laban (29–31; 29:31–30:24, the sons of Jacob, represent a later stage of the tradition), have a Transjordanian setting, the latter being in NE Syria. Another block is set in central Israel, 28:10–20 and 35:7–14 at Bethel, 33:19–20 at Shechem, and 35:2–4 at Bethel and Shechem. There are two traditions about Jacob's change of name (32:23–33 [—Eng 22–32]) and 35:9–13. Jacob is indeed "a wandering Aramaean" (de Vaux *EHI* 169–85; Blum 1984).

**a. Isaac.** There is a collection of stories about Isaac which have already been told about Abraham. 26:1–11 (= 20:1–18 = 12:10–20) is a story about the ancestress and the promise in danger; 26:17–25 (= 21:25–31) tells of a dispute about wells; 26:26–33 (= 21:22–32) narrates a confrontation between the patriarch and Abimelech. Isaac is a less important figure in the biblical story of the patriarchs; he is the channel through which the promises made to Abraham (26:3, 5, 24; 28:3–4) pass on to Jacob (Israel).

**b. Jacob-Esau Conflict Begins.** The action that causes the conflict between Jacob and Esau begins with the deception of Isaac, who is now old and blind (27:1–40). The character types and the parental preferences, noted in 25:27–28, are resumed in 27:3–4, 11–15, 34. Jacob is quiet and pliable, Esau rough and ready. The matter at issue is the father's blessing (27:4, 12, 25, 27–31, 31–38, 41) which Jacob gains by deception and which, after some decades in Paddan-aram, he gives back in part to Esau to seal their reconciliation (33:11).

The conflict is now in motion, and Esau plans to kill Jacob (27:41–45). Rebekah again initiates the action and urges Jacob to flee to her brother Laban in Haran. But there is another motive for Jacob's journey to the region between the two rivers. Esau has taken Hittite wives (26:34) who are an irritant to Rebekah and Isaac (26:35; 27:46). The one who is to carry the promise, Jacob, must take a wife from the family of the patriarch, Abraham (28:1–5). Isaac blesses Jacob again. There is no mention of the deception. As a consequence Esau, who has already two Canaanite (Hittite) wives, goes to his uncle, Ishmael. Isaac's brother from Abraham and Hagar, and takes another wife (28:6–9).

The first conflict, between Jacob and Esau, is now left, as it were, hanging in the air. It is to be resumed and resolved in chaps. 32–33. As Jacob leaves Canaan, he encounters God, 28:10–20, just as he does years later when he returns to Canaan, 32:23–33 [—Eng 22–32]). These two key encounters frame the lengthy Jacob-Laban conflict, chaps. 29–31.

**c. Jacob at Bethel.** The biblical text narrates that Jacob "happens upon a place" (*yūḡga' bammāqôm*), which is a sanctuary, though he himself is not aware that it is a sacred place. He takes a stone from the place and puts it at his head as a protection (he is not using the stone as a pillow). In a dream he sees a ramp (*sullām*) or sloping earthworks reaching from the ground to the heavens on which members of the heavenly court (Job 1:6; Gen 32:2–3 [—Eng 1–2]) are going up and coming down. Heaven and earth are joined, and so Jacob knows that the place is holy. Yahweh stands by Jacob (not at the top of the ramp) and repeats the promises of the land and numerous descendants, and adds another, the promise of the divine assistance or presence, "I will be with you"—a promise peculiar to the Jacob-Esau cycle (26:3–24; 28:15 [—Eng 20]; 31:3; 32:10 [—Eng 9]; 46:3; cf. 48:15; 50:24). Jacob now realizes that "Yahweh is in this place" (vv 16–17). He takes the protective stone which he had put at his head, sets it up as a holy stone (*maššēbâ*) and anoints it. It is to be a witness to the event. He calls the place "the house of El (God)" (*bêt-ʾēl*). He makes a vow and promises tithes (vv 20–22).

Most scholars regard the story of Jacob's experience at Bethel as composite. De Pury (1975: 33–35, 173–76) lists 21 scholars with their proposed divisions of the text which they assign in various ways to J, E, and a redactor. Blum (1984: 9–35) rejects all source division of the passage and argues that Gen 28:10–22 comprises a compact self-contained narrative (vv 11–13a, 16–19a) which gives an account of the foundation of a place of worship by the eponymous father of the people; this story has been built into the broader context of the Jacob cycle by the itinerary note (v 10), the divine speech (vv 13a–15) and the account of Jacob's vows (vv 20–22). The narrative begins with v 11 and continues as far as v 13a, "And YHWH stood beside him." It is interrupted by vv 13a–15 and is resumed in v 16 continuing on to v 19, "He called the name of that place Bethel." The passages vv 13a–15 and 20–22, it is argued, take up a number of themes which have nothing to do with the narrative and which presuppose the broader context of the patriarchal story, e.g., the promise of the land (28:13b–14, see 12:7; 13:14–17; 15:7–21; 26:3–4; 28:4; 35:12; 48:3–4), the promise of descendants (28:14, see 13:14–17; 22:17–18; 26:2–5, 24; 28:3–4; 35:11–13; 48:3–4, 16, 19), the formulas "like the dust of the earth" (28:14a, see 13:16) and "by you shall all the families of the earth bless themselves" (28:14b, see 12:3; 18:18; 22:18), the promise of assistance or presence (28:15, see 26:3, 24; 31:3; 46:3). Blum's argument is very cogent.

There was a sanctuary at Luz in ancient Canaanite times which became Bethel (28:19) and, later, an important center of worship in Israel. The place was to play an important role in Israel's history: it was taken by the house of Jacob (Judg 1:22–25); it was a premonarchic sanctuary and place of assembly (Judg 20:18, 26; 21:2; 1 Kgs 7:16); it was linked with the beginnings of prophecy (2 Kgs 2:2–3:23); and it was the chief sanctuary in the N kingdom (Amos 5:5; 7:10–13; Hos 10:5). There was a tradition that linked the patriarch Jacob with Bethel. The final redactor has taken the story that preserves this story tradition about Jacob, joined it with the promises, and added vv 20–22 so as to link the later cultic practices of vow and tithes, proper to sedentary life, to the patriarch and to Bethel, thus

binding the story into its present context. The whole is now part of the Jacob-Esau cycle.

**d. Jacob-Laban Conflict.** This is a self-contained conflict narrative in which there is no mention of Esau. The first part (29:1–30) is a combination of two stories, the story of Jacob “the wandering Aramaean” who is looking for a wife and comes to love Rachel (vv 1–14), and the story of Laban, the deceiver (vv 15–30). The second part (30:25–32:54) tells how Jacob outwits Laban (30:25–43), how he leaves Laban’s household and outwits him again (31:1–42), and how they are reconciled by making a solemn treaty (32:43–55). God was with Jacob throughout, particularly in the latter episodes (31:11–13, 24, 29, 42).

Just as the self-contained Jacob-Laban conflict has been inserted into the Jacob-Esau conflict, so too has the Rachel-Leah conflict (29:31–30:24) been inserted into the Jacob-Laban conflict. There is a conflict (29:31–30:24) within a conflict (29:1–30 and 30:35–31:54) within a conflict (27:41–45 and chapters 32–33).

The account of the rivalry between Rachel and Leah (29:31–30:24) includes the naming of the twelve children, eleven sons (Benjamin is born later, 35:16–19) and one daughter. The naming seems to be the work of a reviser or editor who gives, as the reason for each name, an action of God in language reminiscent of the Psalms (Westermann 1985: 471–77). The twelve tribes are mentioned in Genesis in chapters 29–30; 35:16–20, 22–28; 46:8–15; 49:1–17. The naming of the children is worked into old narrative material.

Jacob is now ready to return to his own country (30:25). But his departure can only harm Laban who has profited from his twenty years of work (30:25–26). God’s blessing has always accompanied Jacob’s work (30:30). Jacob now outwits Laban (30:37–43), it is not at all clear what is going on in this old herder’s tale. Jacob and Laban finally resolve the conflict with a treaty in which they invoke “the God of Abraham and the God of Nahor, the God of their father” (31:53). The climax of this well-ordered and well-edited chapter comes in v 42: “If the God of my father, the God of Abraham and the Fear of Isaac, had not been on my side, surely you would have sent me away empty-handed. God saw my affliction and the labor of my hands, and rebuked you last night.” Laban has learned that might is not right (vv 24, 29, 38–42).

**e. Resolution of the Jacob-Esau Conflict.** These are chapters of meetings and encounters: with an army of heavenly beings (32:2–3 [—Eng 1–2]); with Esau (32:4–9 [—Eng 3–8], 14–22 [—Eng 13–21]; 33:1–17); with God (32:10–13 [—Eng 9–12]); with the “man” at the river Jabbok (32:23–33 [—Eng 22–32]).

Jacob is afraid as he prepares to meet Esau. But God’s power appears in the form of *mal’ākē ’ēlohīm*, angels (32:2 [—Eng 1]). Jacob had seen the *mal’ākē ’ēlohīm* in his dream vision at Bethel (28:12); they are not the *mal’āk YHWH* of 16:7; 21:17; 22:11, 15 who is Yahweh’s messenger and is identified with Yahweh; rather, they are members of the heavenly court who represent God’s power in 32:2 (—Eng 1) and his holiness in 28:12, the only two passages where the expression occurs. Jacob sends two embassies to Esau (32:4–9 [—Eng 3–8] and 32:14–22 [—Eng 13–21]); between them he prays for God’s help (v 12 [—Eng 11]) and

frames the petition by reminding God of his promises (vv 10 [—Eng 9] and 13 [—Eng 12]).

(1) **Encounter at the Jabbok.** There is broad agreement that a story or a tradition about a demon that guards access to a ford across the river Jabbok has been associated with or applied to Jacob. The Jabbok, *Nahr-az-Zerqa* (the blue river), flows into the Jordan from the E side about 40 km N of the Dead Sea through a very steep ravine. After crossing and meeting Esau, Jacob appears next at Succoth (33:17) and Shechem (33:18–19), both to the N of the Jabbok, a sign that the present passage is not of one piece with the rest of the Jacob story.

The biblical story says that a man, יִשְׂרָאֵל, wrestles with Jacob all night but is unable to overcome him. Jacob demands that the man bless him, which he does (vv 27, 30 [—Eng 26, 29]). Jacob reveals his own name, and the man changes it: “Your name shall no more be called Jacob, but Israel, because you have striven with God and with men, and have prevailed” (v 29 [—Eng 28]). When the “man” (spirit/demon) “faded on the crowing of the cock” (*Hamlet* 1, 1; cf. v 27 [—Eng 26]), Jacob realizes that he has in some mysterious way, encountered God: “For I have seen God face to face, and yet my life is preserved” (v 31 [—Eng 30]). He calls the place Peni-el (v 31 [—Eng 30]), “face of God” (Penu-el v 32 [—Eng 31]); the former has a better assonance with *pannim*, face. An etiological piece about a taboo concerning the sinew of the hip has been built into the story (26 [—Eng 25b]), 32–33 [—Eng 31–32]).

There have been many attempts to explain the meaning of the name Israel, *yisrā’ēl*: it has been derived from *śrh*, to prevail or contend; *śrh*, to fight; *śr*<sup>2</sup>, to rule; Arabic *wasara* and Ethiopic *šaraya*, to heal (Thompson 1974: 40–43). More recently Vermes (1975: 12–14) has derived it from *šrr*, to rule, act as a prince, and has traced its later development in Jewish writing. The “man” of Genesis becomes an “angel” in Hos 12:4–5. An encounter with a river demon has become an encounter with God. Hence, Jacob has struggled with God. God has blessed him, and he can now go to his meeting with Esau in the strength of God.

(2) **Reconciliation of Jacob and Esau.** Jacob’s ceremonial greeting (vv 1–3, 6–7) is in contrast to Esau’s warm advance (vv 4–5). There is no recrimination. Jacob makes a gift to Esau (v 10), thus restoring something of what he had stolen: “accept my gift (*bērākā* blessing) . . . because God has dealt graciously with me” (v 11). God’s favor at work with Jacob is the determining factor. Each, now settled in his own lifestyle, goes his own way (vv 12–17). The biblical story brings them together again to bury Isaac (35:19).

**f. Shechem.** The chapter is in four parts: vv 1–3, the violation of Dinah; vv 4–24, the negotiations; vv 25–29, the attack (with the conclusion in 35:5); vv 30–31, the reaction of Jacob. Two narratives, an older family narrative (a Shechem tradition), and a tribal narrative (a Hamor tradition), have been joined by an editor who made his own contribution to form a third and final narrative.

**g. Bethel Revisited; Death of Isaac.** The account of God’s commission to Jacob and his household (35:1–7) refers back to the encounter at Bethel (28:10–20, in 35:1b, 3b, 7b). The writer is bringing the story of Jacob’s flight and return to a close. The conclusion of chapter 34 is 35:5; v 6 is an itinerary sentence from P, molded into a

unity with v 7 by the redactor. The redactor has arranged the chapter according to a definite plan. The Priestly section is a clearly planned whole, included between two itinerary notes (vv 6 and 27). In v 6, Jacob comes to Bethel; then God appears to him (vv 9–13; v 10 is the Priestly change of name); vv 22b–26 comprise a list of the sons of Jacob; in v 27 Jacob comes to Mamre. Finally in vv 28–29, Isaac dies. The texts that do not belong to P are set into an itinerary (vv 8, 14–15 [P knows nothing of pillars], 16–20, 21–22a); and the itinerary is expanded with notes or brief narratives (vv 8, 17–18, 22a). The editor has prefaced his account with a construction of his own, tying it with 28:10–20. It is important for the family unity that Esau and Jacob bury Isaac (35:29), just as it is that Ishmael and Isaac bury Abraham (25:9).

**b. Descendants of Esau.** The chapter is a redactional unity:

vv 1–14	sons of Esau	names of sons
15–19	chiefs of the sons of Esau	and chiefs are identical
20–28	sons of Seir	names of sons
29–30	chiefs of the sons of Seir	and chiefs are identical
31–39	kings of Edom	
40–43	chiefs of Esau	
	(an appendix)	

Verses 1–5 are a Priestly construction, introduced by *tôlédôt* (v 1). Three Canaanite wives of Esau are named, Adah, Oholibamah, and Basemath. The other wives of Esau are Judith and Basemath (26:34) and Mahalath (28:9). The Edomite king list comes from the period after David's conquest of Edom (2 Sam 8:13b–14). It has been suggested that the list derives most probably from the end of the 6th or the beginning of the 5th century B.C.E. (Knauf 1985).

**C. Patriarchs and Promises**

**1. An Event between God and the Patriarchs.** The promises tell of something that happens between God and the patriarchs, and so are a part of patriarchal religion. God makes the promises directly, without a mediator. Most of the divine addresses in chaps. 12–50 are promises. Promises are constitutive of the narratives of 16:1–14; 18:1–16a; narratives are constructed for the promises (15:1–6, 7–21; Lohfink 1967); the promises are brought together so as to form an address by God (17:1–22; P); they form an independent scene (13:14–17) or episode (12:7; 26:24–25), or are introduced into or linked with narratives (15:13–16; 22:15–18; 26:2–5; 28:2–3; 28:13 [—Eng 14]–15; 35:9–13; 46:3–4); a short promise opens the Abraham cycle (12:1–3), and the Jacob-Esau cycle (26:2–5).

**2. Six Promises.** The promises occur, for the most part, in groups, though occasionally alone. There are broadly speaking, six promises: of a son, of descendants, of divine assistance or presence, of land, of blessing, of covenant.

**a. Promise of a Son.** It occurs alone in chap. 18; in the other cases it is linked with descendants or blessing. This

promise is confined to the Abraham cycle and runs right through the biblical text from 11:30 to 21:1–7. It is very probable that it belongs to the oldest part of the patriarchal tradition. It is distinct from the promise of descendants, as 15:1–6 shows, where vv 2–4 promise a son, and v 5 descendants.

**b. Promise of Descendants.** This promise is not found alone but together with the promise of a son (above), of land and blessing (13:14–17; 26:2–5; 28:3–4; 28:13–15; 35:11–13; 48:3–4, 16, 19); of assistance (presence) and blessing (22:17–18; 26:2–5; 26:24–25; 46:3–4); of blessing (13:1–3; 18:18–19; 22:15–18). There are fixed formulas to express the multitude of descendants: "I will multiply" so that they will be as "the stars in the sky" (15:3; 22:17; 26:4), "as the dust of the earth" (13:16; 28:14), "as the sand by the sea" (22:17; 32:13 [—Eng 12]). Abraham will be the father of a multitude of nations (17:5), the ancestor of nations (17:16), the father of a company of peoples (28:3; 35:11; 48:4), and the ancestor of kings (17:6, 16, 20; 35:11; Priestly emphasis). The promise is retrospective; it speaks from the standpoint of the greatest expansion of Israel from the river of Egypt to the great river, the Euphrates.

**c. Promise of Assistance or Presence.** This occurs only in the Jacob story, chapters 26–50 (26:3, 24; 28:15; 31:3; 46:3). It is linked with Jacob's journeys, and so may well go back to the patriarchal (pre-settlement) period. It occurs alone only in 31:3. This promise is not limited to Genesis; rather it is found throughout the OT (Preuss 1968).

**d. Promise of Land.** The promise is made to Abraham (12:7; 13:14–17; 15:7–21) and later to Jacob and his descendants as a renewal of the promise made to Abraham (26:3–4; 28:4; 35:12; 50:24). It is found alone in 12:7; 15:7–21 (24:7), and with the promise of descendants in 13:14–17; 15:11–13; 48:3–4; 28:13–15. The promise in an inchoate form may go back to the nomadic period. The promise of a settled land is dominant in Deuteronomy where it is confirmed by oath on many occasions.

**e. Promise of Blessing.** The Yahwistic writer has formulated a blessing given by Yahweh to Abraham and prefaced it to the patriarchal story. God who commissions Abraham is God who sends him out to effect blessing. Through Abraham, all the families of the earth "will be blessed" or "will bless themselves" or "will acquire blessings for themselves" (12:1–3 [Westermann 1985: 151–52]; cf. 18:18; 22:18; 26:3–4; 28:14). When God blesses, he confers the dynamism to continue one's posterity through time and space (Gen 1:28), a blessing resumed in 35:11. The patriarchs stand under God's blessing.

**f. Promise of a Covenant.** God, *'el šadday* (P), gives a binding assurance, *berit* (17:7–8), that he will be their God, i.e., the God of Abraham and his descendants.

**3. Promise in History and Tradition.** Each promise has its own history in the tradition. Probably only two, the promise of a son and the promise of assistance or presence "on the way," go back to the pre-settlement period. In the biblical story of Abraham, all the promises are heaped together in the middle of the cycle, chaps. 15–18. The whole is given direction by the promise of blessing at the beginning (12:1–3). The promises, apart from the promise of a son and, probably, the promise of assistance or presence, are the result of experience and reflection; they are

projected back into the past and set within a framework of ancient traditions about the patriarchs.

#### D. Joseph Story

**1. Unity or a Composite Story?** Many scholars explain these chapters by means of classical source division as two separate narratives, J and E, each more or less complete. See JOSEPH, SON OF JACOB. Eissfeldt (*IDB* 2: 375–76, 377) and Seebass (1978) maintain that tribal traditions are the basis of the story. Redford (1970) proposes that the chapters are a combination of an original Reuben version with a later Judah version, brought together and worked over by a redactor, both versions having their origin in the period 650–550 B.C.E. Schmitt (1980) reverses the order; the Judah version from the early monarchy is the original version, while the Reuben version comes from the exilic or post-exilic period. Gunkel (1922) and Gressmann (1923) saw a unity in the Joseph story, but neither could free himself from the accepted source division. More recent scholarship generally favors a unity, with variations: Volz and Rudolph (1933), Whybray (1968), Brueggemann (1972), Coats (1976), Donner (1976), Crüsemann (1978), Willi-Plein (1979), Westermann (1986).

**2. Literary Type.** The terminology used to describe the Joseph story shows uncertainty. It has been called a tale, a story (*Sage*), or a *Novelle*. The terms *novelle* (Old French), *novela* (Spanish), *novella* (Italian), and later *Novelle* (German), have their origin in the Renaissance period to describe certain "romances," longer or shorter, which tell of the exploits of heroes, but there is no general agreement about what precisely they cover (but see Humphreys 1985). The English "novel" is equivalent of the European *Roman*, but the Joseph story is not long or broad enough to come under this category. Von Rad has written that "the Joseph narrative is a didactic wisdom story, which leans heavily on influences emanating from Egypt, not only with regard to its conception of an educational ideal, but also in its fundamental theological ideas" (1966: 300). But the wisdom elements are restricted to chaps. 40–41, and the woman, the wife of Potiphar, in chap. 39 is the spurned woman rather than the seductress against whom the book of Proverbs warns (Prov 2:16–19; 5:1–23; 6:20–25). It is best described, with due caution, as a short story and may be compared with the short stories of Guy de Maupassant (1850–93) or O. Henry (1862–1910), with the difference that the characters and material were at hand to the biblical writer. The biblical writer did not have to create the characters, nor cut the story from whole new cloth. The complete history of the interpretation of the Joseph story is discussed by Ruppert (1965), Westermann (1975: 56–68; 1986: 15–30), Seebass (1978), de Vaux (*EHI* 291–320), Schmitt (1980).

**3. Story in the Broader Sense.** The Joseph story in the broader sense has a Priestly frame (37:1–2 and 50:12–14). It resumes the story of Jacob who has returned to Canaan, buried his father (35:27–28), and settled there (37:1), ending with the account of Jacob's death, and his burial by his sons in accordance with his wishes (50:12–14). The theme of Jacob's death is introduced in 37:35b and runs through to the end (42:48; 44:22, 19; 45:28; 46:30; 47:9, 27–31; 48:1; 49:1, 28b–33). Chapter 38 is not part of the Joseph story, but fills out the story of Jacob's family. The

conclusions of the Joseph and Jacob stories are woven together in chaps. 46–50 and additional material and traditions are included, e.g., the list of all the descendants of Israel who went down into Egypt (46:8–27), the account of Joseph's economic measures as viceroy (47:13–26), the tribal sayings (49:3–27), which lie outside both stories, and other details. The purpose of the tribal sayings is to praise or blame (there is an earlier collection of tribal sayings in Judg 5:14–18, and a later and more theological collection in Deut 33). Reuben, Simeon, and Levi are censured; Judah, Dan, Gad, Naphtali, Joseph, and Benjamin are praised; Zebulun, Issachar, and Asher are blessed in varying degrees. There are word plays on the names of Judah, Zebulun, Issachar, Gad, Asher, and Joseph. There are animal metaphors attached to the names of Judah, Issachar, Dan, Naphtali, and Benjamin; and in the very difficult saying about Joseph, there is a tree (plant) metaphor.

**4. Story in the Narrower Sense.** The story of Joseph proper begins in 37:2 and comprises chapters 37; 39–41; 42–45. It is in essence a family story which begins with the shattered peace of Jacob's family (37:4, 11, 18–23, 33–35), and moves through tension to climax and resolution (45:1–15), with the restoration of *šālôm* to the family. The device of the pairs of dreams is introduced in chap. 37 and repeated in chaps. 40–41. The theme of Jacob's death is sounded. Two traditions of how Joseph was disposed of and sold into Egypt are recorded. In one, Reuben is prominent (37:22–24, 29); in the other, Judah (39:1); now it is the Ishmaelites who take him (32:35 and 39:1), now the Midianites (37:28, 36).

Chapters 39–41 form an interlude in the family story; they use two traditional themes: (1) the rise of a young man, his fall due to an injustice, and his restoration to favor; (2) a stranger or a foreigner or a pauper is summoned to answer a question that the wise of the land cannot answer. Joseph must rise to power before he can help his family in need and restore its peace. The account of the attempted seduction of Joseph by Potiphar's wife (39:7–18) resembles the Egyptian story of the Two Brothers (*ANET*, 23–25) so closely that scholars have thought that the biblical writer had direct knowledge of it. Joseph does not solve the riddles of the dreams of the prisoners, chap. 40, or of Pharaoh, chap. 41, by accepted Egyptian methods (*ANET*, 495); rather "the interpretation of dreams belongs to God" (40:8: 41:16, 25, 32, 38, 39). Joseph proposes that Pharaoh appoint "a man discreet and wise (*nābôn wē hākām*)" to administer the economy of the kingdom (41:33), and Pharaoh appoints Joseph as his viceroy (41:37–45). As viceroy, Joseph is in a position to help his family which has been driven down to Egypt by the famine. The story of the family continues in 42:1. The regular movement from Canaan to Egypt begins: Canaan to Egypt (42:1–5); Egypt to Canaan (42:26–34); Canaan to Egypt (43:1–15); Egypt to Canaan (45:21–28); Canaan to Egypt (46:1, 6–7; Coats 1976). Israel is now in Egypt definitively. These movements lead gradually and inexorably through climax to the resolution which restores the *šālôm* of Jacob's family. Joseph's action in 45:1–15, without any recrimination, is an act of forgiveness. With peace and harmony restored in the family, Jacob can die in peace (45:28). The tension has been resolved; the Joseph story has ended.

**5. Theology.** Gen 45:5–8 and 50:17–31 are key theological passages which tie the Joseph story proper with the conclusion of the story in the broader sense. As Joseph speaks words of comfort to his brothers (45:5), he insists that God has been at work throughout (vv 5b, 7a, 8a): “God sent me before you to preserve for you a remnant on earth, and to keep alive for you many survivors.” In 50:17–21, the guilt of the brothers is acknowledged specifically. But Joseph will not play God. It is God who has turned their evil to good. God is acting throughout. The theological introit to the story proper (39:1–6, 21–23) emphasizes that “the Lord was with him” (vv 2, 3, 5, 21, 23). Joseph is aware that he is God’s instrument: “the interpretation of dreams belongs to God.” God is at work as he brings the brothers to recognize their guilt: “What is it that God has done to us?” (42:28), and “God has found out the guilt of your servants” (44:16). There is no personal revelation to Joseph, nor does he receive divine commands, nor engage in or preside over formal worship. There is no “religion of the patriarchs.” The passage 46:2–5a, where God appears to Jacob, is not part of the Joseph story, but part of the conclusion of the Jacob story.

**6. Egypt.** There is no parallel to the Joseph story as a whole in extrabiblical literature of the period, though 39:7–18 has a parallel in Egypt. Chapters 39–41 are played out in Egypt. They, and the following chapters, display a favorable attitude to the Egyptians and a general knowledge of court protocol (41:37–45; *ANET*, 248a), of dining customs (43:32), of divination (44:4–5), and of interpretation of dreams. But there is no interest in the great buildings or the general culture of Egypt. Westermann (1986: 29) thinks that the Egyptian traits are indicative of the Solomonic period. Vergote (1959) has argued that the Joseph story reflects much ancient Egyptian regal, social, and economic life. Redford (1970: 187–243) takes up twenty-three elements used to support ancient Egyptian influence and argues that they need reflect only the practices of the middle of the 1st millennium B.C.E. Palestine in general had been trading with Egypt since at least 2000 B.C.E.; remains of temples at Byblos, showing marked Egyptian influence, date from the 19th century; and the Amarna correspondence of the 14th century reveals details of the small Canaanite dependencies. Egyptian influence has left its mark. But the dating of Egyptian traits in the Joseph story comes under the history of the relations between Egypt and Palestine.

LITERARY FORMS IN GENESIS

Many of the terms used by biblical scholars to designate the literary forms of Genesis (and other books of the OT) were current among students of literature and folklore in the 19th century; they were used to describe types of literature and folktales well known in W European culture. However, only with great caution can they be applied to the writings of a civilization that flourished in a very different setting over twenty-five hundred years ago. The terms have often been overstrained. It is necessary to describe some of them before studying their application to the book of Genesis.

A. General Literary Terms

1. *Legende* (Legend)
2. *Märchen* (Fairy Tale, Folktale, Tale)
3. Myth
4. Narrative
5. Novella (Short Story)
6. Saga
7. *Sage*
8. Story

B. Literary Terms Applied to Genesis

- C. Other Literary Terms Applied to Genesis
- D. Fixed Formulas and Genesis

A. General Literary Terms

1. *Legende* (Legend). Legend has from its beginning expressed a typically Christian concept: the life of a holy person which was to be read to a community for its edification. Rosenfeld (1972: 11–12) describes it as “the imaginative reproduction of the earthly life of holy people . . . the presupposition of a genuine *Legende* is faith . . . The meaning and efficacy of the *Legende* is limited to the religious community in which it arose. Because it arose out of faith, it has the form of a naive, simple, uncomplicated account.” Miracles are not essential to the legend, but are a regular part of it, being the sign that God is at work in the holy person, thus confirming the person’s holiness (OED 1933; Hals 1972; Rosenfeld 1972; Scullion 1984). From the 17th century, legend took on a transferred meaning of an inauthentic or nonhistorical story, espe-

cially one handed down by tradition from early times, and popularly regarded as historical (OED). In popular speech today, the legend is a story of dubious veracity about historical persons or events. It is best, in scholarly circles, to restrict legend to its original and well-established hagiographical use.

2. *Märchen*. The *Märchen* is a fairy tale, folktale, tale of magic, or simply a tale. A tale is a story, “true or fictitious, drawn up so as to interest or amuse, or to preserve the history of a fact or incident”; again, it is “a mere story as opposed to a narrative of fact” (OED). A *Märchen* or fairy tale is the sort of narrative found in the collections made by the Grimm brothers or in Hans Christian Andersen’s books. The *Märchen* is indefinite as to time and place; its characters have generic or stereotyped names; its world is “the beyond” where the “unreal,” the preternatural and the supernatural, predominates or has become normal; characters flit from place to place; animals and trees speak; people, fairy-godmothers, merlins appear and disappear; poor young men conquer monsters, confront giants, overcome obstacles, and marry princesses—“and they lived happily ever after.” There is a simplicity, playfulness, and lightness of touch in the *Märchen* (Lüthi 1968; 1975; 1976; 1977; 1979).

3. *Myth*. Modern anthropology, sociology, and psychology have made contributions to the study of myth. However, such systems, worked out in European culture in the 20th century, are not to be imposed on the OT. Rather a description of myth for purposes of OT study begins from example. Myth is the sort of thing that is found in collections of ancient Near Eastern texts under the heading of myths and epics (e.g. *ANET*: 3–155) from cultures which have had more or less direct influence on Israel (Barr 1959). These ancient Near Eastern myths are not just symbolic or hazy expressions of truth; they are not metaphorical or poetic expression. They are attempts to express some transcendental truth. Myth is aware of reality, but reaches beyond concrete experience. What is narrated in myth not merely corresponds to reality; it is reality. When Tammuz, an ancient Mesopotamian god of fertility, dies and comes to life again, and vegetation dies and comes to life, the two are not just like each other; they are each other. Myth is not really a literary form, but a way of thinking. One may distinguish myth and *Mythos* (a word used by many German writers): myth is the story itself; *Mythos* is the basic philosophy that underpins it. See MYTH AND MYTHOLOGY.

4. *Narrative*. Narrative is a general term; it is an account of an event, or events, which moves through tension to crisis and resolution (Licht 1978; Alter 1981). Westermann (1984: xii) often uses the word *Geschehensbogen* to describe the movement of a narrative. It is “like the arch of a bridge which spans the whole from beginning to end. Likewise the narrative arch spans an event from beginning to end and makes it into a self-contained whole.” The German word may be rendered “narrative span (arch).”

5. *Novella*. The novella (Old French, *novelle*, Spanish, *novela*, Italian, *novella*) is a shorter (i.e. shorter than the novel, *roman*) prose narrative which tells an unusual, though quite credible, happening; it is brief and eschews prolixity. It has been described as a short novel or a longer short story (the latter, a division of the novella, presents

an event in concentrated form; it often reflects a particular mood or attitude). The novella has its origins in the late Middle Ages and Renaissance: Boccaccio's (1313?-75) *Decameron*, Marguerite de Valois' (of Navarre, d'Angoulême, 1492-1549) *Heptameron*, Cervantes' (1547-1616) *Novelas ejemplares*. This type of writing developed in both western and eastern Europe, and particularly in the English-speaking world; some of the best known of its masters are: Guy de Maupassant (1850-93), E. T. A. Hoffmann (1776-1822), Alexander Pushkin (1799-1837), O. Henry (1862-1910), Henry James (1843-1916).

**6. Saga.** The word *saga* is applied to the narrative compositions in prose that were written in Iceland or Norway during the Middle Ages. The events narrated in the Icelandic narratives belong mainly to the period 874-1030; they were written down in the 13th century. It is for the specialists in this area to discuss whether the sagas were handed down in oral tradition and committed to writing in the later period, or were due to a flowering of creative writing in the 12th and 13th centuries. In any case, there is a long period of oral tradition behind them. Einarsson (1957: 133-34) has summarized the composition and style of the sagas, while Ker (1957: 186) has described the content as follows:

The original matter of the oral traditions, out of which the written Sagas were formed, was naturally very much made up of separate anecdotes, loosely strung together by associations with a district or family. Many of the Sagas are mere loose strings of adventures, or short stories, or idylls, which may easily be detached and remembered out of connection with the rest of the series.

The Icelandic *segja* means to tell; in modern Icelandic *saga* covers the German *Historie* and *Geschichte* (*Historie* is what happened in fact; *Geschichte* is what these events became in the process of their being passed on). Bentzen (1961: 240, n. 3) has noted that the Swedish term "saga," used for the "chimerical fairy-tale," is "not to be confounded with the usage in Danish-Norwegian-Icelandic, where this word denotes a 'history-narrative.'" The events narrated in the Norwegian and Icelandic sagas were *Historie*, that which actually happened; they became famed in *Geschichte*.

**7. Sage.** The *Sage* is a popular story, folk story, or simply a story. Though set in the past, often the distant past, it is specific as to place and names of the characters, and is rooted in reality. Though there are devils and ghosts, dwarfs and giants, ogres and spirits, there is a clear distinction between the real and the unreal world, the natural and the supernatural. The *Sage* has usually been worked over by poetic imagination in the process of transmission. It may be long or short. Orlík (1965) has formulated his well-known ten laws of folk narrative from a study of the shorter forms of *Sagen*. *Sage* has often been translated into English, incorrectly, by "saga" (see above), with which it has nothing to do.

**8. Story.** The OED describes story as a "narrative, true or presumed to be true, relating to important events and celebrated persons of a more or less remote past; a historical relation or anecdote"; and then, under N.5, as "a narrative of real or, more usually, fictitious events, de-

signed for the entertainment of the hearer or reader; a series of traditional or imaginary incidents forming the matter of such a narrative; a tale." It is in this latter sense that story is a general equivalent of the German *Sage* and may be used aptly to describe many narratives, both short and long, in Genesis. The scope of its use is broad.

*Legende* (legend), *Märchen* (tale), *Saga* (saga), *Sage* (story), *Story*, are terms which describe different types of narrative. The *Märchen* and the *Sage* differ in a number of important ways (see above), though there are many and inevitable overlappings between the two. The distinction between them is adequate, but not complete. The legend, as described, shares almost nothing with the *Märchen* but much with the *Sage* or folk story. French has but one word to render *Sage* and *Legende*, namely, *légende*; hence the clear and useful distinction is made between *légende populaire* (or *folklorique*) and *légende hagiographique* (Lüthi 1976: 11). In short, *Sage* (German) = *légende* (French) = (folk) story (English).

## B. Literary Terms Applied to Genesis

**1. Legend.** Biblical scholars, e.g. Fohrer (1968: 90-95), often refer to the Elijah-Elisha cycles of 1-2 Kings as legends. They also use the term "cult legend," i.e. a story or narrative which is attached to a place and sets out "to explain the origins of the sacredness of the place together with the customs which are observed at it," e.g. Jacob at Bethel (Gen 28:10-20). The cult legend "also gives information concerning the origin and history of many details of the cultus . . . of the various marvellous effects which were produced by the ark of Yahweh" (Eissfeldt 1965: 43-44). But, as Kaiser (1975: 50) has noted, the name cult legend "is not without danger, because it encourages us to transfer the characteristic features of medieval legends of the saints to these narratives." It is better to call the current cult legends "cultic etiologies," and the legends about individuals "hero stories," "prophetic stories," or "hagiographical stories." The only narrative in the patriarchal story that falls under the heading of legend as described above is the story of the testing of Abraham (Gen 22:1-19). His steadfast adherence to God in faith is a model for the people of Israel.

**2. Märchen.** The prevalent view of OT exegesis is that there are no *Märchen* in the OT, but that there are *Märchen* motifs (Hermisson 1977: 419; Wilcoxon 1974: 69-71). However, a great number of motifs which Gunkel (1917) claimed to be *Märchen* motifs are simply elements from the world picture current at the time or from myths of the surrounding world (Hermisson 1977: 438; 1985: 312-16), e.g. talking animals (Gen 3:1-7; Num 22:28-30); Moses' staff (Exod 4:2-4); Elijah's mantle (2 Kgs 2:8); Elisha's floating ax-head (2 Kgs 6:3-7). There was no abundance of *Märchen* motifs which would point to a rich *Märchen* tradition in ancient Israel. The *Märchen* is a genre in which God does not appear, or in any case is not central. The wonder is a normal part of the *Märchen* world, but God is neither its source nor its cause. When speaking of OT genres, it is better to drop the word tale (used without qualification) because of its association with the *Märchen*, though some scholars use it regularly (Coats *Genesis* FOTL 1985). *Märchen* is often rendered by fairy tale in English (the title of the collection of the *Märchen* of the Grimm

brothers is *Grimm's Fairy Tales*); folktale is perhaps a more acceptable rendering.

**3. Myth.** There are no myths proper to the OT, though mythological language and imagery often occur (e.g. Isa 27:1 [see *ANET*: 137, lines 36–39]; 51:9; Ezek 28:11–19; Amos 9:3; Pss 74:14; 89:11—Eng 10; 93). In Genesis, the prelude to the flood story, the “angelogamy” of 6:1–4, is a “mythological torso” (Gunkel 1910: lxvi). Myth has left its footprint, however faint, on parts of the two creation accounts in Genesis 1–3.

**4. Narrative.** Very many of the *Sagen* or stories or cycles of stories in Genesis may be described as narratives.

**5. Novella.** The only story in Genesis that can be classified as a novella is the Joseph story in the narrower sense—that is, Gen 37; 39–41; 42–45 (Humphreys 1985: 82–96). It may be described too as a (long) short story. Coats (*Genesis FOTL*) classifies other stories in Genesis under the heading of Novella: the story of Lot as a subplot in the Abraham story (11:10–12:9 + 13:1–14:24 + 18:16–19:38), though it is very disjointed with disparate parts; the story of Sarah-Hagar (16:1–21:21), though this is rather a story about Hagar as the secondary wife of Abraham who finds herself in distress because of oppression by Sarah (16:1–14 is reworked in 21:1–21); the solemn assurance by the Lord of a son to Abraham and Sarah (17:1–22; 18:1–15), the reflection (18:16–21) and the theological discussion (18:23–33), the account of the destruction of the cities (19), and the account of the promise in danger a second time (20), though they are very disparate and so scarcely qualify either as separate novellae or as parts of a continuous novella; the story of the search for a bride for Isaac (24), though it is a family narrative; the Rachel-Leah conflict and the Jacob-Laban conflict within which it is set (29:1–32:1—Eng 31:55), though it does not compare well with the unity that is the Joseph story (37; 39–41; 42–45); the Judah-Tamar story (38), though it really belongs to the Jacob cycle and is scarcely a novella.

**6. Saga.** Neff (1985: 31–32), attending to Ker's description of saga, suggests that one might speak of the saga of Abraham, 12:1–25:18, and of the saga of Jacob, 25:19–36:43. This is not unreasonable. Coats' proposal to call 1:1–11:9 the Primeval Saga is subject to reservations as the “events described” are on the other side of history. To avoid confusion it seems better to restrict saga to the Nordic classics. The stories about Abraham and Jacob can be suitably called the Abraham Cycle (or story) and the Jacob Cycle (or story).

**7. Sage.** The OED (1933, saga, 2), Gibert (1974; 1979: 179–94), Van Seters (1975: 131, n. 19) and Scullion (1984: 327–29) have pointed out the error of translating *Sage* by *saga*, and McCarthy has written that “the failure to understand that German *Sage* means “folktale” or the like and has nothing to do with English “saga” or the Icelandic original has misled generations and deprived form-criticism of a valuable word” (1981: 9). Coats (*Genesis FOTL*, 5–7, and *passim*) and Neff (1985: 19–25) have seen the problem, but have not met with complete success in their use of the terms *Sage* and *saga*. Coats (*Genesis FOTL*, 7–8; 1985: 63–70) prefers to translate *Sage* by *tale*; the present article prefers *story*.

**8. Story.** Story is a general term which embraces large blocks of narrative as well as short narratives of 10–15

verses. The large blocks are the primeval story (1:1–11:26), the patriarchal story (11:17–36:43), which may be subdivided into the Abraham cycle (story; 11:27–25:18), and the Jacob-Esau cycle (or story; 25:19–36:43), and the Joseph story (37; 39–45), plus the two conclusions (chaps. 46–50). In the primeval story, distinct units from various traditions have been brought together to form Israel's statement on the world and on human beings. It is not a closely knit “long short story,” but it has sufficient coherence, given by the final editor, to be called a story in the looser sense; it is a series of traditional or imaginary incidents on the other side of history. The loose unity, but essential coherence, of the two blocks that form the patriarchal narrative is enough to allow them to be called stories. The Joseph story in the more restricted sense (chaps. 37; 39–45) is well described as a “long short story,” though some scholars prefer the term novella (Coats 1985; Humphreys 1985).

The types of stories within these blocks must be considered in the context in which they are preserved. Many of them have had an independent history, perhaps even a long one, before they took their present form in the biblical text, so that it cannot be presumed that they circulated exactly in the form that they have in the OT.

Stories, which form parts of the primeval story, are 2:4b–3:24; 4:1–16; 11:1–9. The first is a literary composition put together from various sources or traditions and edited into a well-bound unity, though the joins are clear. The stories of the first brothers and of the tower are just that, “*Sagen*.” All three stories follow a pattern. The same basic pattern is there in the flood story which must be reckoned a genuine, though composite, narrative as it moves to climax (7:17–24) and resolution (8:1–5).

The long patriarchal story (or cycles) contains many stories. The concise “Ancestress in Danger” (12:10–20), set within the framework of an itinerary (12:9 and 13:1), is considered by many scholars (Van Seters 1975: 169; Westermann 1984: 162) to exemplify in essence Olrik's “Epic Laws of Folk Narrative.” The second version of this episode (20:1–18) is not a story or legend in the strict sense, but rather a theological development (Coats *Genesis FOTL*, 149–51), while the third version (26:1–16) is more a story stretched over the promise of blessing made to Abraham (vv 2–5). The dispute between the herdsmen of Abraham and Lot is an episode in the life of the family in the broad sense, and scarcely a story. The Abraham, Sarah, Hagar story (16:1–16) is a story of family strife in the context of Sarah's barrenness. In 18:1–16, the promise of a son constitutes the narrative; the tradition of a visit by strangers or unknown divine messengers to announce the coming of the son, sets the stage for the announcement. The story of Lot and Sodom and Gomorrah (19:1–29) is a narrative of destruction and rescue, and has been likened to the story of the flood in the primeval era (Westermann 1985: 297). The long narrative of the quest for a bride for Isaac (24:1–67) has been classified as a novella, and more specifically, an example-story to show the ideal model for future generations (Coats *Genesis FOTL*, 166–70). But this longest narrative in the patriarchal story is rather a family story about a search for a bride (vv 3–4 and 67) with a clear and transparent structure, commission (vv 1–9), execution (vv 10–60), resolution (v 67); the middle section

makes use of the traditional literary device of repetition, well known in messenger stories (vv 11–14, 15–21, 42–49; Westermann 1985: 282–83). The Shechem narrative (34:1–31) is a tribal story composed from three parts.

**C. Other Literary Terms Applied to Genesis**

**1. Dialogue.** Two passages in the patriarchal stories are dialogues: Abraham and the Lord before Sodom (18:22–23), and Abraham and the Hittites at the sale of the cave in the field at Machpelah (23:1–20). The former discusses a theological problem; the latter, within a Priestly frame (vv 1–2, 19), describes a process of bargaining, not unlike that which goes on in the Middle East today (Scullion 1982/83: 54). Van Seters (1975: 98–100) explains the narrative from the pattern followed in certain neo-Babylonian documents known as “dialogue contracts,” which de Vaux (1978: 256) also mentions as a possible parallel. However, the “dialogue documents” begin with a title, “tablet of”; then follows in direct discourse the offer made by the legal advocate: “A went to B and spoke as follows.” There is no further bargaining. The reply of the second party is recorded in the third person in stylized form. But in Genesis 23 there is a protracted dialogue; the only legal formula is “the current merchant’s rate” (v 16), and the only legal procedure is the presence of witness (vv 17–18). The parallel is weak. The assurance given to Abraham of a son and land in 15:1–21 is not a dialogue; Abraham’s two utterances in vv 3–4, 8 are no more than the occasion for a divine speech; the assurances follow from a prophetic oracle of salvation, “Fear not,” found about sixty times in a theological sense in the OT, especially in Deutero-Isaiah (e.g. Isa 41:10, 13, 14; 43:1, 5; 44:2; 54:4). The dialogues between Joseph and (1) Potiphar’s wife, (2) the prisoners, and (3) Pharaoh, do not follow any particular pattern.

**2. Divine Speech.** The divine speeches of 9:8–17 and 17:1–22, which give assurance of a *bērit*, covenant (the word is used 7 times and 13 times respectively), are both from the priestly tradition. In the former, Noah does not speak; in the latter Abraham falls on his face twice (vv 3, 17) and makes two brief interventions (vv 17b, 18). Before the dialogue that precedes the destruction of Sodom and Gomorrah, there is a divine soliloquy (19:17–21) which is perhaps composite.

**3. Etiology.** An etiology is a narrative whose purpose is to explain the origin of a custom, an event, a name, a geographical formation, an object, a shrine. There are no etiologies of any length in Genesis, but there are many (popular) name etiologies: 2:23 (woman); 3:20 (Eve); 4:25 (Seth); 16:13–14 (God who sees); 19:22 (Zoar); 19:37, 38 (Moab, Ammon); 21:31 (Beer-sheba); 26:20b (Esek), 21b (Sitnah), 22 (Rehoboth), 33 (Shibnah); 28:16–17 (Bethel); 31:47–49 (Jegar-sahadutha, Galeed, Mizpah); 32:3b (—Eng 2b; Mahanaim, a word play); 50:11 (Abel-Mizraim). Some scholars (von Rad *Genesis* OTL, 411; Coats *Genesis* FOTL, 298–300; Westermann 1986: 173) understand the account of Joseph’s economic measures (47:13–16) as a tax etiology, i.e. a story to explain a particular method of taxing in Egypt.

**4. Genealogies.** In chaps. 1–11, the genealogies are a constitutive part and form an essential framework.

Priestly source (P): 5:1–32 Adam, through Seth to Noah  
6:9–10; 7:28–29 Noah and sons  
10:1–7, 20, 22, 23, 31, 32 generations of sons of Noah  
11:10–26 Noah, through Shem to Abraham  
11:27a, 31–32 Terah’s life cycle.

The Priestly genealogies trace an unbroken line from Adam to Abraham. Everything that happens in the patriarchal story springs from them. They are monotonous, systematized, and present sober succession without elaboration. Genealogy and narrative stand far apart. They record “the continuous event of generation following generation” (Westermann 1984: 16). They preserve (1) a constant—the same sentences recur, begetting, lifespan, more offspring, age, death (chap. 5; chap. 11 is a little different), and (2) a variable—names and numbers. Yahwist source (J): In the Yahwistic genealogies, genealogy and narrative are closely linked and the form is flexible. Notes are added: (1) names are explained (4:1b, 25b; 5:29; 10:25b); (2) the progress of civilization is recorded (4:2, 17b, 20b–22; 5:29; 9:20; 10:8–9); (3) the expansion of the race is noted (9:19b; 10:18b, 25b); (4) there are geographical descriptions (10:10–12, 19, 20); (5) there are songs and proverbial sayings (4:22–23; 5:29; 10:9b); (6) the invocation of YHWH is projected back to the beginnings (4:26).

The genealogies of chaps. 1–11 are a witness to the effects of God’s blessing.

Genealogies frame the Abraham cycle (11:27–32 [with itinerary information]; 25:1–6 [an *ad hoc* creation]; 25:7–11[P]); and the Jacob cycle (25:19–20[P]; 35:8, 16–20[?], 22b–26[P], 28–29[P]).

Wilson (1977: 11–55) has demonstrated the importance of genealogies and their setting in life for non-writing peoples, to which the genealogies of the patriarchal stories bear a close resemblance, and that the OT genealogies cannot be understood apart from their oral prehistory. They serve to specify the position of an individual in the community and form, so to speak, the family coordinates. They have their origin in tribal life and did not arise out of mere historical or antiquarian interest.

From the point of view of form, the genealogies may be classified as linear or segmented (Wilson 1977: 18–20, 196–97), the latter giving the relation to each other of the members of a group:

Linear	Segmented
5:1–32; 9:28–29	10:1–32
11:10–26; 11:27–32	25:12–16 (segment of one generation)
22:20–24; 25:7–11	36
36:9–14	

The genealogy of Esau in chap. 36 is a “collection of Edomite and political information, most of which is presented in genealogical form” (Wilson 1977: 167).

**5. Itinerary.** The itinerary is a literary genre which stems from the nomadic or interant lifestyle. It reflects the process of movement from place to place. The patriarchal

itineraries are not mere constructions (Davies 1974: 80–81); patriarchal tradition knows of an immigration of Abraham into Palestine. The itinerary form comprises: (1) information about the route, (2) the place of departure, (3) the place of arrival, (4) brief notes about events on the way (Westermann 1985: 56–58, 62). Itineraries run quietly through chaps. 12–25. Typical examples are: 11:31–32: Terah took . . . went forth from Ur . . . to go to the land of Canaan . . . came to Haran . . . settled there . . . died; 12:4–9: Abraham took . . . set forth to go to the land of Canaan . . . came to Canaan . . . passed through to the oak of Moreh . . . built an altar . . . moved to the east of Bethel . . . built an altar . . . journeyed further to the Negeb; 12:9–13:1: Abraham went from the Negeb . . . arrived in Egypt . . . event there . . . went up from Egypt; 20:1: Abraham journeyed toward the Negeb . . . dwelt . . . sojourned in Gerar; 22:19: all returned to Beer-sheba; hence, they must have started from there. Add to these 26:1–6.

The motif of flight-return enters the itineraries of chaps. 27–33. Gen 28:10 and 29:1 are itinerary notes with an episode on the way in between. There are fixed itinerary formulas and data in 33:16–17, 18–19. In chap. 35, there is the departure from Shechem (vv 1, 3, [5]) and the arrival at Bethel (v 6); then come the two episodes on the way, the building of an altar (v 7), and the death of Deborah, Rebekah's nurse (v 8). There follows the departure from Bethel (v 16), the episode on the way, Rebekah's death as she gives birth to Benjamin (vv 16b–20), the stop beyond Migdal-Eder (v 21), and the arrival at Mamre. In 36:1–8, an itinerary is joined to a genealogy: Esau took (v 6a) . . . and went, (v 6c) . . . and dwelt in the hill country of Seir (v 8). There is a concluding note, "Esau is Seir," (v 8b). Finally, Anah "found hot springs," (v 24b), quite likely on a journey.

**6. Hieros Logos (Cult Legend).** This is a formula, or the sacred words of a story, which is attached to a place and sets out to explain the origin of the sacredness of the place together with the customs which are observed at it. Jacob's experience at Bethel (28:10–20) is usually considered to be a cult legend (but see the preceding article, 28:10–20), as is the purchase of land at Shechem (33:18–20), which concludes with "there he erected an altar and called it El-Elohe-Israel," God, the God of Israel. The same is said of 35:1–7, where Jacob's family puts away all foreign emblems and he erects an altar at the place which he names El-bethel. In 35:9–15, Jacob sets up and anoints a pillar at Bethel. Three of these episodes, all of them "on the way," concern Bethel which became an important shrine in Israel.

**7. Lists.** A list is a serial document. There is the list of the names of the sons of Jacob (35:22b–26), of Esau's wives (with genealogy; 36:1–6), of the names of the chiefs of the sons of Esau (36:15–19, 40–43), of the Edomite kings (Wilson 1977: 167–98). Gen 36:9–14, 20–36 are lists/genealogies, as is 46:8–27, the enumeration of the descendants of Israel who went down into Egypt. There is a list of peoples whom it was important to know about (15:19–21), and a list of 16 places or personal names in the genealogy of 25:1–6.

**8. Reports.** This is a genre that communicates events for the sake of the record and without developing a nar-

rative: (1) birth reports (4:25–26, Seth and Enosh; 21:1–7, Isaac; 26:19–26, Jacob and Esau); (2) death reports (23:1–2, 19, Sarah; 25:7–11, Abraham; 25:17–18, Ishmael; 35:16–20, Rebekah; 35:27–29, Isaac; 47:28–31; 49:1, 29–33, Jacob; 50:22–26, Joseph); (3) various: a marriage report (19:30–38; 36:1–5); a report of Esau's move (36:6–8); an adoption report (48:1–12); and a blessing report (48:15–16, 19, 20a).

The Priestly creation account has been described, with reservations, as a report (Coats *Genesis* FOTL, 47), as a narrative, at least as a point of departure (again with reservations; Westermann 1984: 80), and as a document that sets out priestly doctrine (von Rad *Genesis* OTL, 63). The account, however, is unique in form and does not fit into any generic literary category. It is a solemn and stylized statement of the priestly teaching that creation proceeds immediately from the word of God which is itself event. The best parallels to the creation account of chap. 1 are Psalm 104 (a hymn of descriptive praise) and Psalm 136 (the great Hallel, a litany of praise to God for his action of creation and redemption). The flood story (6:13–8:19) is a composite narrative set within disparate theological reflections (6:5–8; 6:11–12 and 8:20–22; 9:1–17), rather than a report.

#### D. Fixed Formulas and Genesis

Gunkel (1906: 109; Rollmann 1981: 184), after careful study of the biblical texts, arrived at a description of a literary type (*Gattung*): it must exhibit, (1) a common store of ideas and attitudes, (2) a clear and constant form of speech, and (3) a setting in life from which alone the content and form can be understood. This description applies better to the shorter sayings, formulas, and episodes rather than to the longer episodes or stories. The following are the main fixed, short formulas that occur in Genesis.

*Accusation:* *mah zo't 'āsīt*, "what is this you have done," or a very similar formula, or a formula with *lāmmā*, "why": 3:13; 4:10; 12:18–19; 20:9; 26:10; 29:25; 31:26, 30; 43:6; 44:15. It formulates a direct accusation of a misdemeanor.

*Blessing:* The verb *bārak*, "bless," is used as an imperative or a jussive: 1:28; 9:1–2, 27–28; 12:2–3; 22:18; 26:1–3; 27:27–29; 28:3–4, 14; 32:28–29 (—Eng 27–28); 46:1–5a; 48:13–20.

*Call to attention:* The word *hinneh*, "behold, here I am," or the like, 22:1, 7, 11; the particle draws attention.

*Covenant formula:* "I shall be your God, and you shall be my people." The formula, typical of Jeremiah, is expanded and varied in 9:8–17; 17:10.

*Curse:* *ʾārūr*, cursed, specifying person and content: 3:14–19; 4:11–12; 9:25; 27:29b.

*Dirge:* a lament over a misfortune: 37:35; 42:36; 43:14.

*Farewell speech:* An old man is to die; he expresses resignation, exacts a promise or oath, or gives a commission: 24:2–4; 46:30; 47:29–31; 48:11, 21–22; 49:29–32.

*Narrative link:* the phrases *ʾaḥar haddēbārīm hāʾēlleh*, "After these things . . .," or *wayēhi ʾaḥer* . . . "Now it happened after . . ."; a formula connecting otherwise noncontinuous pieces: 15:1; 22:1, 20; 39:7; 40:1.

*Self-revelation (or self-identification):* God or a person identifies himself; *ʾānōkī*, *ʾānī*, "I" plus a noun: 15:1, 7; 17:1; 24:34; 26:24; 27:19; 28:13; 31:13; 35:11–12; 45:3, 4; 46:3.

*Tôledôt*: Scholars are not in agreement about the translation of *tôledôt* (Wilson 1977: 158, n. 57; Tengström 1982). Suggestions are: generations, successions, descendants, family history, genealogy. In Genesis the formula occurs in "These (*ʿelleh*) are the *tôledôt* of" or "This (*zeh*) is the book (*sēper*) of the *tôledôt* of" (once, 5:1): 2:4a (heavens and earth); 5:1 (Adam); 6:9 (Noah); 10:1 (sons of Noah); 11:10 (Shem); 11:27 (Terah); 25:12 (Ishmael); 36:1 (Esau-Edom); 36:9 (Esau); 37:2 (Jacob).

*Transition formula*: "Now it happened at that time," *wayēhî bāʿet hahiuʿ*, 21:22; 38:1, "Now it happened at the end of (after)," *wayēhî miqqēs*, 4:3; 8:6; 41:1.

*Word of YHWH*: "The word of YHWH came to Abram," *hāyāh dēbār YHWH ʿel* (15:1); this is a common expression for prophetic revelation, but occurs only here in Genesis. It is frequent in narrative texts in Samuel-Kings: 1 Sam 15:10; 2 Sam 7:4; 1 Kgs 12:22; 16:1; 17:2, 8, etc.

The pioneering work in the study of literary forms in the OT, and in the book of Genesis in particular, was done by Hermann Gunkel (1862–1932). He not only made use of the results of Near Eastern archaeology, but also applied the methods of comparative literature to the study of the OT. Gunkel based his study of literary types on the assumption that the rhetorical forms and literary types in OT times were more fixed than they are in modern times and, as it were, imposed themselves on the writer. If a poet or writer or cultic official wished to speak on a certain theme or in a particular situation, then he did so in a certain way. Forms and formulas became highly stylized. Now there is much truth in this insight which was a major contribution to the study of the Bible. But literary forms and form criticism are tools for the understanding of the Bible and not tyrannical masters. Naturally there were exaggerations in the use of this newfound tool.

One must be aware of the literary type of a whole book as well as of its component parts, large and small (see the preceding article). One must be aware also that fixed formulas are often used in different circumstances. For example, it has been well argued that the formula "fear not" (*ʿal tîrâ*) is a key component in the language of war, in particular the Holy War (Conrad 1985). But it is an exaggeration to say that every time the phrase is used it is in the context of war or evokes associations with war. In Gen 15:1, the Lord addresses Abraham, "Fear not, Abraham, I am your shield." To say that Abraham is addressed as a warrior because he has taken part in a battle in the previous chapter (14:14–16), and the root of the word "shield" (*māgēn*) is used as a verb in 14:20b (*miggēn*), is to strain the exegesis of the text. A birth formula, "Behold, you are with child and shall bear a son; you shall call his name Ishmael," occurs in 16:11 and in other places in the OT (Gen 17:11; Judg 13:3–5; Isa 7:14; 1 Kgs 13:2; 1 Chr 22:9) as well as in the NT (Luke 1:31), but always with slight variations. The form has not imposed itself as if it were a straitjacket.

There is no such thing as a "pure" literary form, that is, a form that appears always word for word without variation. But there is a definite pattern according to which certain forms of speech are pronounced, e.g. the oracle of salvation (Westermann 1987).

A literary form is not something that one can choose or not choose to adopt. One writes or speaks in some form

and there is no form which is not stylization. The whole person is expressed through the form. It is not partly person, partly form. The style is the person. We must not equate the style merely with kinds of embellishments, with terseness, prolixity, continued metaphor, insistent parallelism. It is not possible to separate completely form from content. Any attempts to give precedence to the message must be very delicate when the work is of any degree of sophistication. A literary form is not like the skin of an orange which one peels off to get at what really matters. In brief, then, it is neither the form nor the content that prevails. The meaning of the text emerges from a fine blending of both. And the person who speaks or writes, and the situation out of which the speech or writing comes, will regularly modify the form.

JOHN J. SCULLION

**GENEVA BIBLE.** The Geneva Bible is the translation made by the Marian exiles in Geneva and issued in 1560 by Rouland Hall at the expense of the English Church in Geneva. The preface describes the work as requiring “two yeres and more day and night.” William Whittingham, Anthony Gilby, and Thomas Samson, influenced by the issuing of Pagninus’ Latin Bible as well as by Oliveton’s French, and the Italian version, corrected Tyndale’s text by Beza’s Latin NT. The OT is based on the Great Bible corrected from Hebrew and Greek compared with the Latin text of Leo Juda. The NT revised Whittingham’s Testament of 1557.

The Geneva Bible (Herbert 1968: No. 107; all number references hereafter refer to Herbert 1968) printed in Roman letter borrowed the innovation of printing the verses within the chapters as separate paragraphs from Whittingham’s NT. Words not in Greek, but necessary for English, were in italics. There were long prologues, chapter summaries, and copious marginal notes. There were

woodcuts like those used in a French Bible published in Geneva the same year. The size was small quarto (28 × 20 cm).

Geneva Bibles printed after 1587 have a NT revised by Laurence Thomson who was secretary to Sir Francis Walsingham, and those after 1599 have the notes on the Apocalypse done by Junius, making three types of Geneva Bibles in all.

John Bodley received a patent for the exclusive right of printing the revision in England for seven years; Archbishop Parker in 1565 requested that a twelve year extension of Bodley’s patent be granted. However, no Geneva Bibles were printed in England until after the death of Parker in 1575. The Barker family retained the printing rights for 130 years, when it passed to the Baskets for sixty years, and they sold it to John Eyre of Landford Wilts. The Geneva was the first Bible in English, printed in Scotland in 1579.

Though never authorized and never needing it, the Geneva Bible proved to be extremely popular. Between 1550 and 1644 there were an estimated one hundred and forty editions of the Bible and the NT. After 1611 when it could no longer be printed in England, editions printed in Amsterdam and Dort gave the date 1599 and the name of Christopher Barker as printer. It is estimated by Butterworth (1941: 231) that nineteen percent of the wording of the King James is due to the Geneva. It influenced the translators of the King James version in their revision more than any other English version.

Though the rendering had earlier appeared in Wycliffe, in Caxton’s *Golden Legend*, and in Coverdale, the Geneva is known as the “Breeches Bible” from its translation of the clothing of Adam and Eve in Gen 3:7. While it has commonly been said that the Geneva was the Bible of the home in the Elizabethan period and the Bishops’ was the Bible of the Church, there were many exceptions. There were quarto printings of the Bishops’ Bibles and folio printings of the Geneva. Churchwarden’s accounts of the period record the purchase of Geneva Bibles for some parishes. Even after the making of the Bishops’ Bible, Andrews, Dillingham, and Overall continued using the Geneva in their sermons. The Geneva was used by William Shakespeare in his later plays and by John Bunyan. While it is known that the Puritans favored the Geneva, that it alone was allowed on the Mayflower seems disproved by John Alden’s King James Version (on display at Pilgrim Hall in Plymouth, Massachusetts).

The notes of the Geneva are Calvinistic and anti-Catholic and are equal to a running commentary. In Junius’ notes the images of the Apocalypse are applied to the church of Rome. Though popular with the people, the notes were described by Archbishop Parker as “prejudicial notis which might have ben also well spared.” The Geneva was decried by King James at the Hampton Court Conference as the worst of all the translations, and its notes described as “partiall, untrue, seditious, and favouring too much of daungerous, and trayterous conceites.” Nevertheless, there were printings of the King James Bible with Geneva notes in 1642 (No. 564), 1649 (No. 620), 1679 (Nos. 742, 743), 1863 (No. 782), 1708 (No. 987), and 1715 (No. 936).

Selections from the Geneva were used in the *Soldier’s*

*Pocket Bible* of 1643 (No. 677). The Geneva was reprinted in facsimile by Bagster in 1842 (No. 1846), and the text in the *English Hexapla* of 1841 (No. 1840) and by Luther A. Weigle in his *The New Testament Octapla* in 1962. The text of Psalms was printed in the *Hexaplar Psalter* of 1911 (No. 2173) and the text of Genesis included in Weigle's *Genesis Octapla* of 1965. The Geneva Bible was again reissued in a facsimile reprint in 1969 by the University of Wisconsin Press. The making and influence of the Geneva Bible is the subject of a multivolume (in 1988 twenty volumes) study by Lewis Lupton.

**GENITALIA.** The Bible often employs euphemism when referring to the male and female sex organs. See BIBLE, EUPHEMISM AND DYSPEMISM IN THE.

**GENIZAH, CAIRO.** See DAMASCUS RULE.

**GENNAEUS (PERSON)** [Gk *Gennaios*]. Father of Apollonius, one of the five military governors of a district of Syria in the time of Antiochus V, 164-162 B.C.E. (2 Macc 12:2). The father of Apollonius is mentioned to distinguish him from another Apollonius, son of Menestheus, mentioned earlier (2 Macc 4:21). The five local governors would not let the Jews live quietly and in peace to go about their farming (2 Macc 12:1-2). It is not clear from the text whether the governors had orders or permission for the central government to oppress the Jews. This passage has no parallel in 1 Maccabees, but it may have been derived from a common source (Goldstein 2 *Maccabees* AB, 432). The Jews did fight with neighboring peoples (1 Maccabees 5), but this reference seems to say that they fought with local Macedonian officials.

BETTY JANE LILLIE

**GENNESARET (PLACE)** [Gk *Gennesaret*]. 1. A plain thirty stadia long and 20 stadia wide (3.5 × 1.5 miles) on the NW side of the Sea of Galilee between ancient Tiberias and Capernaum (*Ant* 3.521). As part of the rift valley, the plain is located 200 m (660 ft.) below sea level. Apparently, one of three branches of the Via Maris passed through the plain linking Megiddo and the coast with Hazor, Syria, and Mesopotamia (Negev 1972: 327); local roads connected it to important cities such as Sepphoris. The area is associated with Chinnereth of Jewish tradition (*Deut* 3:17; *Josh* 11:2; 12:3; 19:35).

Much of the early activity of Jesus and the Jesus movement apparently took place in or near this area. According

to gospel tradition, Jesus and his disciples were blown off their journey to Bethsaida and landed instead in the region of Gennesaret (*Matt* 14:34 = *Mark* 6:53). A variant from D reads Gk *Genesar*. The basaltic red soil carried by three brooks, Nahal Amud, Nahal Zalmon, and Nahal Arbel, made the plain fertile and allowed the growth of a variety of species including walnut, palm-trees, figs, and olives (*Ant* 3.515-18). According to Theophrastus, papyrus was planted and harvested by Egyptians near the lake (*HP* 4.8.4). Strabo mentions that balsam plants, a major export item, grew around the Lake, no doubt in this area (16.2.16). Hengel argues that the Romans may have extended balsam production to Galilee in order to increase profits (Hengel 1974: 45). The region was heavily populated during the Greco-Roman period and included the major urban centers of Tiberias and Tarichaeae/Magdala as well as the large village of Capernaum on its northern boundary.

2. City overlooking the fertile plain whose name became associated with the plain and the Sea of Galilee; see CHINNERETH.

3. An alternate name for the Sea of Galilee (*Luke* 5:1; 1 *Macc* 11:67).

**GENRE.** See FORM CRITICISM.

**GENTILES, COURT OF THE.** A portion of Herod's temple square open to Jews and gentiles. An enclosure or barrier (Gk *druphaktos*; Heb *soreg*) surrounded the inner sanctuary beyond which gentiles were forbidden to go. Tablets written in Greek and Latin were apparently placed at thirteen entrances on the low parapet that marked the boundary to the area specifically reserved for Jews; the tablets warned non-Jews not to enter (*Joseph. JW* 5.5.3; 6.2.4; *Ant* 17.11.5; cf. *m. Mid.* 2.1-3). Two tablets with a Greek inscription have been found, a complete one in 1871 (Clermont-Ganneau) and a fragment in 1935 (Iliffe). The complete one reads "No foreigner is to enter within the forecourt and the balustrade around the sanctuary. Whoever is caught will have himself to blame for his subsequent death" (Schürer *HJP*<sup>2</sup> 2:222, n. 85; cf. 285, n. 57). In Acts, Paul was accused of taking a gentile, Trophimus the Ephesian, into the temple, presumably meaning that they passed from the court of gentiles through the enclosure (*Acts* 21:28-29). Around the court's perimeter were porticoes; it was probably in one of these porticoes that, according to gospel tradition, Jesus overturned the money changers' tables (*Matt* 21:12; *Mark* 11:14; *Luke* 19:45; *John* 2:15). Josephus reports that Samaritans (ca. 6-9 C.E.) secretly scattered human bones in some of the porticoes and temple area, no doubt referring to this large area (*Ant* 18.30). The total area of the temple court could comfortably hold 75,000 people (Meiers and Strange 1981: 52).

**GENUBATH** (PERSON) [Heb *gēnubath*]. Son of Hadad, an Edomite of the royal house who found favor in Egypt where he took refuge when David conquered Edom (1 Kgs 11:20). Genubath's mother is the sister of the queen, Tahpenes. That Genubath is weaned by the queen and raised with the sons of Pharaoh indicates the high esteem in which his father was held in Egypt. The name Genubath may be of N Arabic origin (*gnb*) or stem from an Egyptian name (*gnb<sup>2</sup>*).

**GEOGRAPHY AND THE BIBLE.** This entry consists of two very different types of articles. The first article surveys not only the physical geology and geomorphology of Palestine, but also the human geography, including land use and settlement patterns characteristic of the land. The second article examines how, in antiquity, biblical and early Jewish writers themselves configured the world and Israel's geographical relationship to it.

**GEOGRAPHY OF PALESTINE**

Geography is a spatial science which seeks to explain location and distributions on the earth's surface. Palestine expresses this geographical tradition rather well. For example, the region is located 31 degrees N of the equator. At such latitudes desert and Mediterranean climates converge. Palestine is also approximately midway between the Nile and Tigris/Euphrates River basins indicating a sense of centrality and geopolitical consequences between great civilizations of the past which emerged to the W and the E. These basic patterns, to a high degree, have directed human occupancy and cultural activity of the diverse landscape.

The discipline of geography is also viewed as a bridge between social and physical sciences. The task of geographers is to interpret the meeting and the interrelationships between natural history and cultural history (Sauer 1972: 1–2). That is, they seek out interrelationships between land, humans, and time. The landscape is often dictated by geological forces and the structure of the earth's rocks in the subsurface. The physical forces such as weather and climate over eons of time break down the exposed rock to create soil and prepare the way for erosion by water. Such

geological and climatically controlled processes and events began millions of years ago.

Superimposed on the geologic and climatic mosaic of Palestine is the much more recent imprint of people. Palestine is a long settled region and its peoples are heirs to old and culturally diverse civilizations. With each new skill humans seized opportunities and resources to improve their well-being. Human groups benefited from the natural resources such as springs for water, topography with defensive advantage, and lowland soils which could be cultivated with ease. Geography may be viewed as human ecology since interactions between human and physical processes do occur. Humans are not set apart from the natural landscape but are participants or even motivators in its changes. Since the recession of the glaciers which began some 20,000 years ago the most significant modifier of the landscape has been people—not physical processes. Within the short span of occupancy the geography of Palestine has been transformed from a physical entity to a culturally modified environment.

In the brief survey of the geography of Palestine which follows, the physical elements including its geology, geomorphology, climate, soils, and water resources are discussed. This overview is followed by the human geography through biblical times. Included are subsections on land use, settlement patterns, rural and urban settings, and road networks.

**A. A Geographic Perspective of Palestine**

Since ancient times Jerusalem was portrayed as the *omphalos*, that is, the earth's navel, from which order was established and diffused to "those who dwell at the earth's farthest bounds" (Ps 65:8). The preeminence of Palestine and particularly Jerusalem was cartographically expressed on O and T maps. The Cottonian map, a 10th-century

Anglo-Saxon predecessor to the traditional O and T maps which followed, depicts Europe to the left, Africa to the right and the Middle East and Asia at the top (i.e., east) (Elster 1970). The "O" of the map was represented by a universal ocean which circles the land masses. The "T" represented the Red Sea to the right and the Black Sea to the left. These two seas joined the Mediterranean Sea at approximate right angles which in turn, vertically bisected the map. The intent was, of course, to geographically highlight the importance of the Holy Land. When the map was oriented, E was naturally to the "top" of the map where it, figuratively speaking, belonged.

Although T and O maps are geographically expressions of the past they do illustrate the theological significance of the Holy Land. Other maps also reveal salient geographical characteristics about Palestine. The region is situated midway between the Nile and the Tigris and Euphrates River basins which were centers of exceptional civilizations. The routes which led from Asia to Africa and Europe funneled through the narrow sliver of arable land called the Fertile Crescent which terminated in Palestine.

In terms of geology, natural vegetation, and climate, Palestine is a meeting place. It is here that several crustal plates of the earth are pushing, pulling, and sliding past one another. The end product of these global subsurface forces are contorted land forms and inland seas created in the region which are manifested in the earthquakes and recent volcanic activity recorded in the exposed rocks.

Palestine is a botanical boundary where three major natural vegetation zones meet: Mediterranean, Saharo-Sindian and Irano-Turanian. Trees and xerophytic shrubs of the Mediterranean zone contrast sharply with the sparse plant cover of the arid Saharo-Sindian zone. The Irano-Turanian zone is an intermediate grass steppe land forming a transition between the other two zones. A combination of climatic conditions for plant growth as well as modification or deforestation of the vegetation due to long human occupancy has left little of the original cover.

The land is also a place where arid and wet climates meet. Parod in Galilee annually receives 1,000 mm of precipitation whereas the Negeb 450 km to the south receives almost none. The boundary between the desert and the wetter zone is elusive and flexible which is illustrated by the repeated shifts of human settlements over time.

The region was a meeting place of tillers and urban dwells. Semblance of urban status appeared with Jericho in the 6th millennium B.C. The site covered an area of 32 hectares and was protected by a stone wall.

Curiously, the coastal plain and its shoreline were less significant to the people of Palestine than to others in the Mediterranean Basin such as the Phoenicians, Greeks, and Romans. The occupants were oriented toward the land not the sea. The land was a meeting place for farmers and nomads. The farmers preferred stability and lived in secure villages whereas the nomads tended to the needs of their flocks. In both cases water was key to their economic pursuits. During periods of ample water supply both prospered.

## B. Physical Character

1. **Geology.** Although the geology of Palestine and the Sinai, in terms of rock types, structures and history is

complex, it is significant in terms of land forms, water resources, and human occupation of the landscape. The rocks which make up the region may be broadly divided into three sequential types. See Figs. GEO.01 and 02. The oldest rocks are of Precambrian age which chronologically are followed by a prolonged record of sedimentary deposits. The youngest earth materials are the most recent deposits occupying the lowlands.

The most ancient rocks are some two to three billion years in age (Precambrian) and with the exception of the Sinai are of limited exposure. The rocks were derived from magmas which cooled in the subsurface to form calc-alkaline and alkaline magmatic rocks. These igneous rocks went through repeated folding to form high mountains in the S part of the region. The Sinai Peninsula, Arabia, E Egypt and the Sudan form the geologic core of the Middle East which is referred to as the Arabo-Nubian Massif. Over the millions of years the region was fractured and split by earthquakes. The ruptured zones were filled with younger crystalline rock and volcanic deposits which locally metamorphosed the existing rock. Today, the only aerially significant Precambrian exposures N of the Sinai occur NE of the Gulf of Elat.

The Precambrian Era was followed by Paleozoic, Mesozoic and, most recently, the Cenozoic Eras which covered a span of 0.5 billion years. This period of geologic time was generally characterized by deposits of sedimentary rocks. The land mass rose and subsided many times causing repeated inundations and subsequent exposures by the ocean which geologists refer to as the Tethys. During a period of drowning by the Tethys Sea, marine deposits, primarily carbonates, were laid down as muds which gradually hardened into sedimentary strata. Limestone, chalk, marl, dolomite, and flint were the common depositional products. The limestones frequently were composed of marine fossils such as foraminifera and coral. When the land was exposed during the regression of the sea, terrestrial deposits such as sandstone and gravels were deposited and lithified. The widespread Nubian sandstones in Palestine and the Sinai are evidence of the terrestrial regime in the region.

On the basis of the geology, eight transgressions of the sea took place: five during the Paleozoic Era and three during the Mesozoic Era. The geographical distribution of the marine and terrestrial rocks reveal that the Transjordan to the E experienced greater periods of subaerial deposition. In contrast the Cisjordan to the W and N is predominantly characterized by marine deposits, suggesting that this region was submerged for a longer period of time and regression of the sea was a sporadic intermittent event.

The present era of geologic time (Quaternary Era) has witnessed terrestrial deposition in basins along the Mediterranean Sea and the trough from the Sea of Galilee (Lake Kinneret) southward beyond the Dead Sea to the Gulf of Aqaba. During the Early Quaternary, more familiar features such as sand dunes along the shoreline, loess of the N Negeb and red sands of the coastal plain were deposited by winds. Also the Terra Rossa of the hills of Judea (e.g., Hebron Hills, Bethel Hills) and the marls in the Jordan Valley were deposited during this time.

Although the glaciers of the "Ice Age" did not directly

GEO.01. Geological map of Palestine.

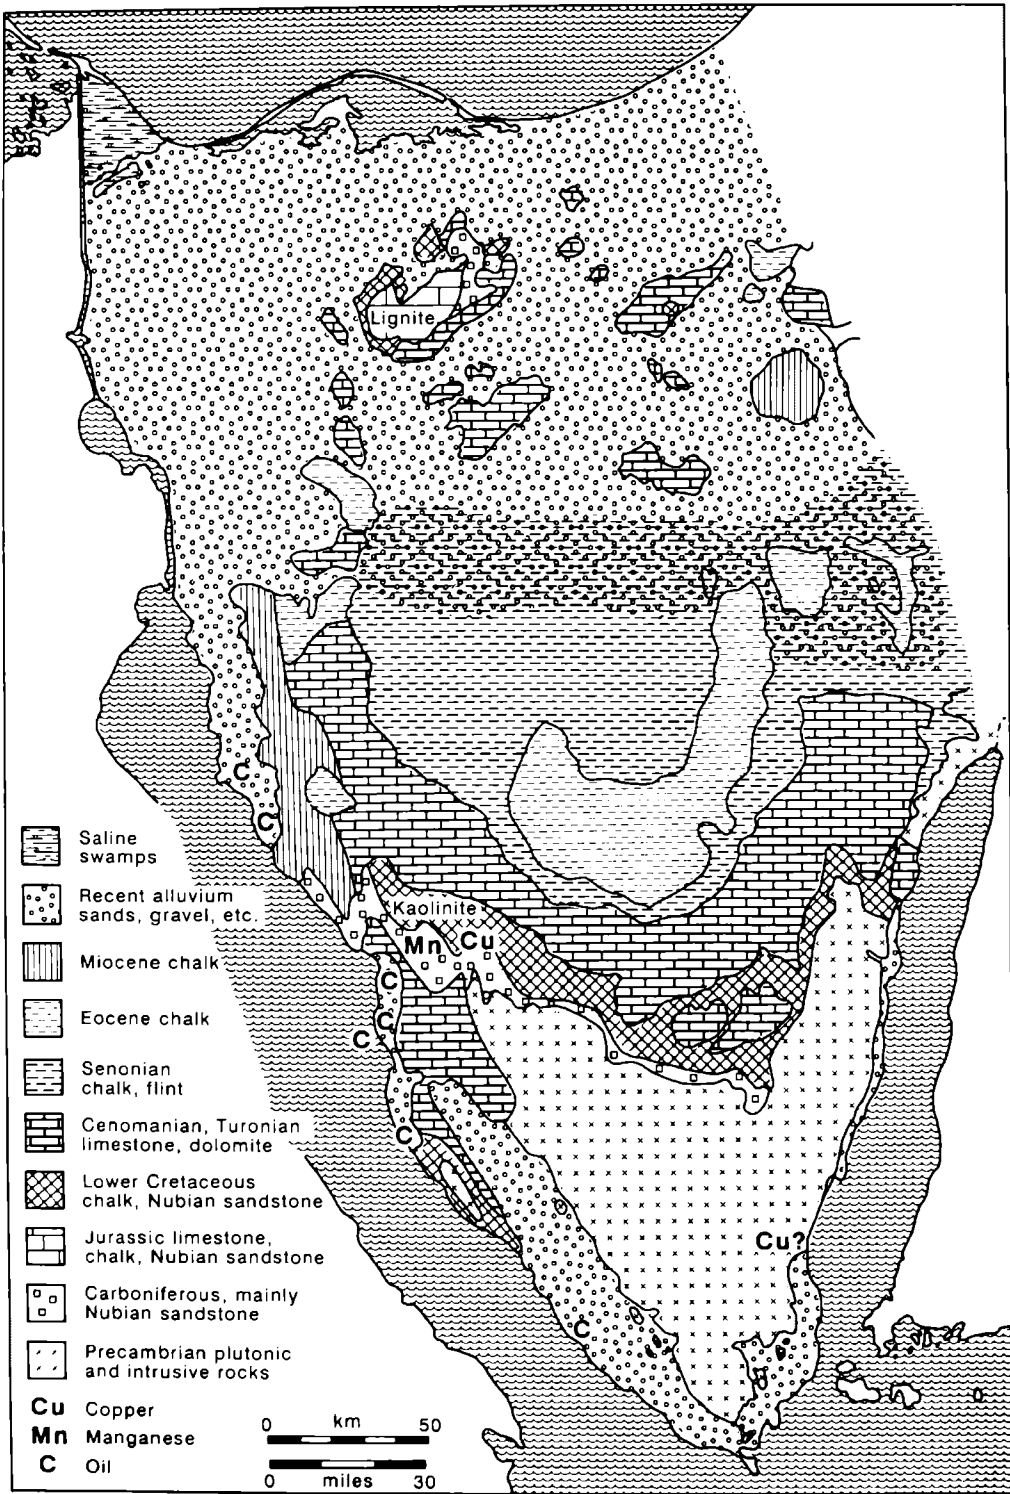

effect Palestine, the accompanying Pleistocene climatic change did. With its onset, cooler climatic conditions occurred between 600,000 and 30,000 years ago and are referred to as pluvials. The lower evaporation rates coupled with a probable increase in precipitation created lakes and wetlands in valleys and more intensive weathering of the exposed rocks. Streams with higher discharges carved canyons and deposited coarse debris in valley bottoms. Additional deposits included the Lissan marls of the Jordan Valley and a volcanic episode which poured lavas onto the Golan, E Galilee and Basan in Transjordan.

**2. Geologic Structures and Plate Tectonics.** During the long periods of geologic time, marine and terrestrial deposition dominated the scene. However, skeletal clues suggest mountain building occurred during Precambrian time. More recently, however, the more salient geologic structures were formed. During the middle Cenozoic Era (Lower Miocene Epoch), the region from Spain to the Middle East and beyond experienced a principal mountain building event which is continuing. Referred to as the Alpine-Himalayan revolution, simple folds were created in the sedimentary rocks of Palestine. Earthquakes accompanied the displacement of the land which were manifested as faults outlining the linear depression of the Jordan Valley. Over time, the rift deepened and tributary valleys formed. The rift valley which is one of the most outstanding geologic features on the surface of the earth is clearly visible as a linear trough occupied by the Sea of Galilee, the Jordan River, and the Dead Sea, and continuing southward to Elat, a total distance of some 360 km.

In overview, the structural changes occurring in Palestine are related to the concept of plate tectonics. The earth's crust is composed of several plates, like broken slabs of ice on a lake. Along their margins, the crustal plates are converging, diverging, or sliding laterally past each other. Since motion is occurring along the edges of the plates, earthquakes due to faulting, vulcanism and related geological displacements such as mountain building commonly take place along relatively narrow zones. A boundary separating the Arabo-Nubian Plate from the African Plate is located in the Red Sea where separation of Africa and the Arabian Peninsula is occurring. The plate boundary extends into the Gulf of Elat and farther N, creating the Dead Sea Rift. The plate boundary has the appropriate geological characteristics: volcanic activity, earthquakes and displacement of the earth's crust.

Seismological stations have been in place in the Middle East only since the 1930s. Therefore the seismic activity is historically not well documented. In spite of this, non-instrumental and instrumental observations indicate that between 1900 and 1980 over 50 earthquakes occurred adjacent to the Dead Sea Rift (Aryeh 1985). The seismic activity along the fault system is the result of the relative movement of the African and Arabo-Nubian plates which on the average have been one-half to one cm per year. Bowen and Jux (1987: 159) believe the total displacement was 105 km since the end of Mesozoic time.

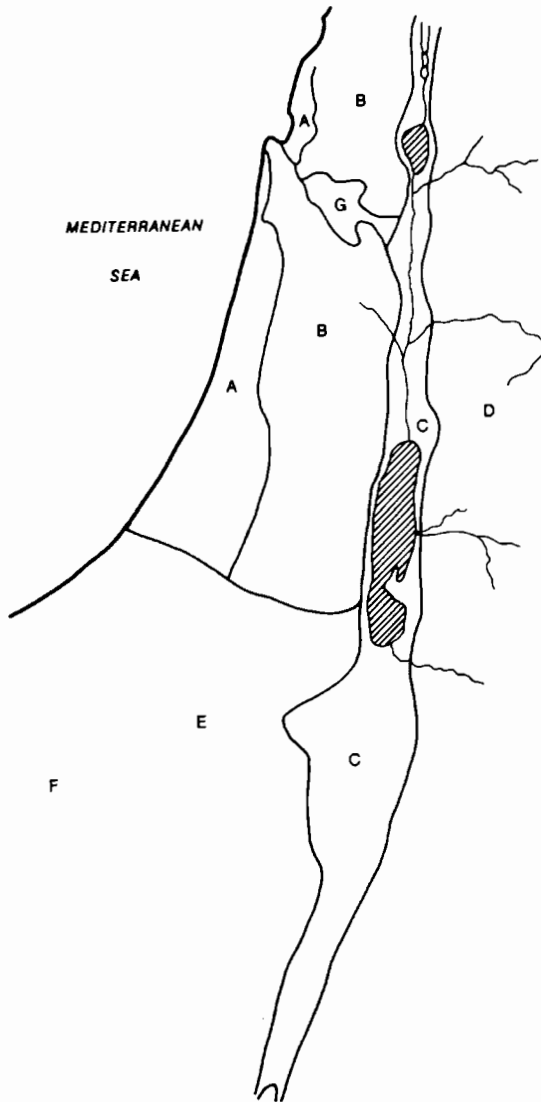

Recent investigations (Neev et al. 1987) based in part on Landsat satellite pictures suggest that vertical displacements are actively occurring along the E Mediterranean shoreline. Faulting has uplifted the land whereas the Mediterranean basin off the coast of Palestine has been sub-

GEO.02. Geological map of Sinai.

merged as blocks of the ocean crust subsided. "The sea looked and fled, Jordan turned back. The mountains skipped like rams, the hills like lambs" (Ps 114:3-4), poetically describes the geological instability of the region.

**3. Geomorphology.** The present-day topographic expression of Palestine began to evolve with the withdrawal of the Mesozoic seas and the Cenozoic uplifts and faulting. Orni and Efrat (1971) recognized six geomorphological provinces. See Fig. GEO.03. These are: the coastal plain; the hill country; the Dead Sea Rift and its branches; the

**GEO.03.** Six geomorphological regions of Palestine. A, coastal plain; B, hill country; C, Dead Sea Rift; D, Transjordan; E, Negeb; F, Sinai; G, Jezreel Valley.

Transjordan; the Negeb; and the Sinai Peninsula to the S and SW.

**a. The Coastal Plain.** The coastal plain of the Palestine is a rather straight depositional surface extending along the Mediterranean shore. Topographically, the region is characterized by beaches and sand dunes occasionally interspersed with wetlands. There appears to be two source areas for the sediment. Currents moving northward supply quartzic sand-size particles to the shoreline from the Nile River. It has been suggested (Orni and Efrat 1971) that during the Pleistocene pluvials, which corresponded to periods of lower sea levels, the Nile River transported coarse sands from the Abyssinian highlands to the sea, which were then moved by coastal currents to the Palestinian coast. An alternative or supplemental source of sand is Wadi el-Arish which drains most of the Sinai and debouches into the Mediterranean 80 km W of Gaza. The siliceous sands are clearly derived from non-carbonate sources and are thus not local sediments. The deposits N of Haifa, however, are essentially composed of calcium carbonate and are derived locally from the weathered rocks of the interior of Palestine.

Much of the shoreline has precipitous rock cliffs 10 to 40 m high suggesting that the coast is erosional in nature. Sandstone outcrops locally called "kurkar ridges" parallel the shoreline. Kurkar are thought to be sand dunes deposited during the Pleistocene and cemented by calcareous solutions. However, recent investigations (Neev et al. 1987: 4-5) suggest that fault activity and earthquakes may account for the position and trends of the kurkar ridges.

**b. The Hill Country.** The hill country occupies most of the country between the coastal plain to the W and Jordan to the E. The hills were formed during the relatively recent Alpine-Himalayan mountain building period and are landforms of the Cenozoic age. With the exception of lower Galilee where volcanic basalts cover the surface, the rocks are sedimentary carbonates and include limestones, chalk, marl, and dolomite.

Morphologically, the hills in the S (Judea) trend in a general north-south direction. Breaching and erosion has exposed the interior of some of these features, thus forming anticlinal valleys with interior drainage. Northward in Samaria over a distance of 50 km, three northeast-southwest ridges paralleled one another to form Mount Carmel in the NW, the Iron Hills in the center and the Tevez Hills in the SE. Structurally, the ridges are anticlines separated by two downward synclinal valleys. The subregion to the N is abruptly terminated by faults set at approximate right angles to the Jordan Valley, making the lineation of the ridges less clear.

The geomorphic picture in the hills of Galilee is less clear because folding was complicated by faulting. It has been suggested (Orni and Efrat 1971: 74) that an anticlinal ridge striking N/S is paralleled by secondary folds on its flanks similar to the hill country to the S. However, faulting across the strike of the folds created tilted blocks. An additional element adding to the complexity of the topography was the more recent volcanic activity which has produced basalt plateaus. In summary, the topography consists of isolated narrow ridges, elevated plateaus, and dissected valleys and basins.

**c. The Dead Sea Rift.** The most striking topographical feature in Palestine is the elongated valley created by rifting between the Cisjordan and Transjordan. The rift is the N sector of a plate boundary which extends southward into the Red Sea. A branch of the rift extends into E Africa which is occupied by well known lakes such as Lake Tanganyika and Lake Rudolf of the African Rift Valley. In Palestine the width of the rift varies from 5 to 25 km. Three lakes occupy the rift. From N to S these are Lake Hula (el. +70 m), Sea of Galilee (el. -209 m) and the Dead Sea (el. -395 m). Both Lake Hula and the Sea of Galilee were created by lava dams which impounded the drainage to the S. Prior to the 1950s Lake Hula, which was a basin colonized with papyrus and other marsh plants, was converted to fertile farmland (Fisher 1978: 414). The difference in elevation between the rift floor and adjacent upland is explained in part by vertical faulting which intensified during Late Cenozoic time. However great thicknesses of sediment have also contributed to the subsidence of the rift. On the basis of geophysical evidence, (Orni and Efrat 1971) 7000 m of alluvium overlies the bedrock in the Dead Sea area. The river readjusted its gradient as the water level of the Dead Sea oscillated. During higher lake levels the Jordan River meandered within its valley depositing alluvium (Kallner and Rosenau 1939). As the level of the Dead Sea fell, the river incised the valley bottom, creating a lower floodplain and abandoning the formerly deposited older and higher surfaces which now stand as river terraces.

**d. Transjordan.** Transjordan includes the region east of the Dead Sea Rift. Geologically, in most areas, the Transjordan is the continuation of the hill country W of the rift. Its W boundary is sharply delineated by escarpments which face W, whereas the E slope has a gradual transitional zone to the Syrian Desert. With the exception of Cenozoic volcanics in the Golan region, most of the Transjordan is composed of uplifted carbonate rocks of Mesozoic age. The uplift was greater to the W adjacent to the rift. Thus the plateau surface dips gently eastward. The uplift of the plateau was gentle enough to allow the rivers in the Transjordan to cut downward and maintain their westward flowing courses. High, stream-eroded cuestas set perpendicular to the rift are well displayed E of the Dead Sea Rift. The most striking cuesta, Ras en-Naqb, has a local relief of 300 to 400 m. In front of the cuestas, prominent sedimentary hills mainly composed of Nubian sandstones have remained exposed. Where river dissection has been extreme, large alluvial fans have been deposited at the base of these escarpments.

**e. The Negeb.** The Negeb occupies an area of about 12,000 km<sup>2</sup> (4,600 mi<sup>2</sup>). On the map, this geomorphic region has a shape of a near-isosoles triangle with its apex at the port city of Elat. Its remote location from the Mediterranean presents an area of extreme aridity. Geomorphologically the Negeb has a great diversity of land forms particularly from E to W. The E sector of the Negeb is well defined by the Arabah Valley which is the S most extension of the Dead Sea Rift. The rift valley averages 60 km in width. In spite of the aridity, flash flooding is rare but geomorphically significant in the Arabah Valley. Ex-

tensive alluvial fans derived from flood events have been deposited along the floor of the rift valley.

North and east of Elat the Arabo-Nubian Massif with its ancient crystalline rocks forms a rugged landscape. The Precambrian crystalline and metamorphic rocks break down rapidly, creating vertical fractures often resulting in high angle slopes. Flanking the Massif is the Paran Plateau. This surface attains elevations of 600 m and gently dips to the NW where it intersects the Arabah Valley at an elevation of 100 m. Most of the plateau is flat indicating that the carbonate bedrock has not been severely deformed over time. Wadi Paran exhibits a dendritic drainage pattern and has a channel width of up to three km, indicating that high river discharge conditions occasionally occur.

Midway between Elat and the Mediterranean, in the central Negeb, is a region of hills (Negeb Hills) commonly exceeding elevations of 1,000 m. Compressional forces on the strata during the Cenozoic Era created ridges and valleys generally conforming to anticlines and synclines. Comparatively little secondary deformation occurred to distort these primary structures. The anticlinal structures are in some localities breached, forming valleys within the anticlines. Makhtesh Qatan and Makhtesh Ramon are outstanding examples of these structural landforms.

Between the Negeb hills and the Mediterranean lies a plain centered on Beer-sheba. Compared to the E Negeb, this plain is a low subdued surface ranging in elevation from 50 m in the W to 500 m in the E. During early Cenozoic time the sea penetrated the region forming a shallow estuary in which chalk (calcium carbonate) precipitated. With the sea's regression the exposed area was blanketed with loess soil deposited by the wind. Sand dunes extending northward from the Sinai contribute to the landscape diversity of this area.

**f. The Sinai Peninsula.** On a map, the Sinai Peninsula has two outstanding attributes. It is some three times (60,000 km<sup>2</sup>) the size of Israel prior to the Six Day War, and it has a long coastline encompassing much of its triangular shape. Sinai may be subdivided into four geomorphic subareas: the high mountains in the S; the a-Tih Plateau; the Northern Plain; and the coastal plain. Considering the size and the variability of rock types, the drainage network of the peninsula forms a rather simple pattern. Contrary to drainage patterns commonly observed in arid regions, very little of the peninsula drains inward. About two-thirds of the Sinai is drained northward by Wadi el-Arish which has a length of 250 km. This clearly suggests that higher topography occurs in the S. In the S area short wadis with steep gradients radiate from the uplands and debouch into the Gulf of Suez and Elat.

The mountain block of the S is composed of granites, porphyries as well as metamorphic rocks, and is part of the Arabo-Nubian Massif. The highest elevations of any geographic region discussed are located here. Gebil Umm Shaumer and Gebil Eth Shari are 2586 and 2438 m above mean sea level, respectively. This Precambrian surface is crossed by numerous lineaments. N of the ancient crystalline complex the Nubian sandstones are exposed forming a crescent-shaped band of rock which lies uncomfortably above the Precambrian basement.

The a-Tih Plateau is composed of resistant limestones

and carbonates and represents about 60 percent of the peninsula's land area. Since the carbonate rocks do not weather as rapidly as the softer Nubian sandstones they have been preserved as well defined topographical ridges. Several elevations exceed 1,000 m (e.g., Ras al-Ganeina, 1,626 m). To the N elevations are usually less than 400 m. The carbonates, although resistant, have been deeply dissected by N flowing drainage.

The a-Tih Plateau merges with the Northern Plain which is, in general, relatively flat. However, isolated, elongated ridges oriented NE-SW appear as a continuation of fold structures noted in the Negeb. The ridges occur as two sets parallel to one another, and attain elevations of several hundred meters. Jebel Yiallaq, which is the highest ridge, has an elevation of 1,094 m. The floor of the Northern Plain is occupied by sand dunes which are crescent-shaped and are composed of quartz sand. Over large areas they are oriented in parallel chains.

The coastal plain along the Mediterranean Sea is 230 km in length. An outstanding feature of the shoreline is a barrier spit which has enclosed a lagoon, Sabkhat el-Bardawil. The linear barrier is skewed eastward suggesting that the sediment source is to the W. It has been suggested that the Nile River supplies sediments to the shoreline of Palestine indicating that the longshore currents are from the W. The coastal zone of the Sinai joins the coastal plain of Palestine to form a northward sweeping arc.

**4. Climatic Setting of Palestine. a. Weather and Climate.** The day to day condition of the atmosphere, including air temperature, precipitation, and air pressure, is referred to as weather. With each passing hour these elements, which are interdependent, change. However the change in the weather in Palestine from one day to the next is not as great as that experienced in Europe or N North America. The average condition of the atmosphere, on a monthly basis for example, may be referred to as climate. Since climate is based on statistical averages over the year, variability from one year to the next is modest at best.

At the midlatitudes of the earth we most often think of seasonality in terms of temperature. Winters in North America and Europe are cold or cool whereas summers are hot or warm. Although temperature contrast in Palestine does occur, particularly in the interior of the region, it would be more appropriate to consider seasonality in terms of wet and dry seasons. Baly (1987: 21-23) not only recognizes a distinct wet and dry season, but two transitional seasons (from September 1 to mid-October and from mid-April to the end of May) each lasting about six weeks. Precipitation in terms of quantity, the period of occurrence, and its geographical distribution is perhaps the most significant physical element in directing human activity on the landscape of Palestine.

**b. Controls of Weather and Climate.** A combination of atmospheric, marine, and topographic factors provide the essential controls of the climate of Palestine. Much of Palestine has a modified Mediterranean climate with increasing aridity eastward and southward. The more salient climatic controls are outlined below.

The region is located between 30 and 33 degrees N latitude. During the period of high sun (summer) a subtropical high air pressure mass over N Africa expands.

This condition creates hot and dry conditions over the Mediterranean basin. The wet season occurs when low pressure storm tracks over Europe are displaced more southward during the winter months. During this season, cyclonic storms move eastward through to the Mediterranean. Precipitation occurs mainly in the form of showers caused by the unstable air of the intruding cold fronts.

The precipitation bearing winds move from W to E in Palestine. However, the mountains and hills strike in a N-S alignment. As the unstable air rises over the topographical barriers, orographic precipitation occurs on the windward slopes of the hills. As the winds descend along the lee slopes in the interior, the air expands and is drier, bringing less precipitation to the interior of the region.

The proximity to the Mediterranean Sea plays a role in temperature modification. Air with higher humidity results in lower annual temperature ranges. The temperature contrast between summer and winter along the coastal plain of Palestine is 13 C degrees (Levi 1985: 20-21). However, in the isolated desert of the SE which is the lee side of hills, the difference in temperature between summer and winter is 18 degrees C (Levi 1985: 20-21).

**c. Water Requirements.** While precipitation data express the total intake of water in a given area, they do not reflect the amounts of needed or available water to sustain specified natural vegetation or agriculture. The amount of available moisture in a given area is determined by precipitation and by evaporation which is expressed as a water budget. Aridity is in a sense, the amount of moisture evaporated rather than the amount precipitated, and may be expressed as a mean annual potential evapotranspiration rate. Cressey (1960: 107-11) determined that the highest mean annual potential evapotranspiration occurs in the Dead Sea, an area of negative water balance or where potential evapotranspiration exceeds precipitation. More equitable conditions occur in the highlands in the N part of the region where altitudes are higher, temperatures are cooler, and precipitation is 1,000 mm annually.

**d. Climatic Variability and Settlement.** Climatic change in the E Mediterranean and specifically in Palestine continues to be researched. Although several approaches to the question are used, such as paleobotany and geoarchaeology (Hopkins 1985: 101), satisfactory conclusions are still evasive. Fisher (1978: 72-73) suggests the long continuity of human activity in the Middle East implies only modest if any environmental change. He notes that the distribution of trade routes and settlements in the interior have maintained their unchanging geography for hundreds of years. Butzer (1957), after sifting through a diversity of information, came up with the same general conclusions with minor stipulations. Conversely Vita-Finzi (1969) examined river terrace deposits in several sites around the Mediterranean which suggested wetter climatic conditions during the post-Roman period.

The geographical pattern of aridity may in part, contribute to an understanding of human settlement in Palestine. Early village settlements occurred towards the end of the Natufian period (mid-late 9th millennium B.C.). The locations and associated artifacts revealed that the sites were next to permanent water sources (Miller 1980: 33). Throughout the centuries sites in upland regions appear to have had a relatively stable population compared to

lowland sites. In the lowlands however, human occupancy shifted with the geographic extent of aridity. The temporal pattern of the distribution of settlement in the Negeb broadly defined by Schechter and Galai (1977: 263), on the basis of Butzer's data (1957), is as follows:

- 6000 B.C. Settlements mostly in the Dead Sea Rift (Arabah Valley) with several in Negeb S of Dead Sea and Beer-sheba.
- 5000 to 4000 B.C. Previous settlements abandoned; settlement does not occur S of Dead Sea; settlements in oasis N of Dead Sea and agriculturally favorable lands further N.
- 3500 to 3000 B.C. Settlement again encroaches S mostly on loess areas around Beer-sheba; again abandoned about 3000 B.C.

The changing pattern of settlement, abandonment, and resettlement particularly in the S, may be due to recurring patterns of aridity. Amiran (1953) after examining more recent population pulsations (1875 to 1953) suggested that in the E (Dead Sea Rift) the line of aridity and settlement are relatively inflexible. Here desert conditions are largely a result of rain shadow conditions, and a broad zone of precipitation variability is lacking. Along the S in the Negeb proper, landforms are more subdued and the line of aridity is more flexible in part because rain shadow conditions do not occur. Here the belt of fluctuation is about 100 km wide compared to some five km for the E. To be sure, the security of the Negeb has played a role in human settlement. However, an alternative possibility may be the variable width of the arid zone in this region. As aridity expanded in the S, settlements were abandoned and as aridity lessened settlements increased. See also PALESTINE, CLIMATE OF.

**5. Soil Types and Salinity.** Although often overlooked, soil is one of the most vital biophysical resources of a region. Without it, agriculture is impossible and livestock herding is marginal at best. It has been suggested (Raikes 1966: 72) that Neolithic settlement at Beidha favored sites near fertile retentive soil rather than near water. It is a resource which has been intensely used and misused over time. Several factors are responsible for soil development. These include climate, parent material, or rock type upon which the soil forms, vegetation and microorganisms, slope and time. In general, climatic conditions and parent material are the two most significant factors in soil formation.

On the basis of climate and topography, Reifenberg (1947) delineated Palestine into four regions, and identified alluvial soils, Terra Rossa soils, and Mediterranean Steppe soils as the most significant in terms of agriculture. More recently, Dan and Koyumdjisky (1963) recognized soil types on the basis of three terrain types: a coastal region; a mountain and hill country; and thirdly, a valley, plains, and plateau regions. Each terrain type was further subdivided with regard to moisture conditions and parent material.

The coastal zone is composed primarily of sandy deposits. In the N where higher moisture conditions prevail, non-calcic brown soil is found. Further S in the semiarid

regions, reddish chestnut soils occur. In the arid zone proper, calcareous coarse textured burezems (arid brown soils) have developed.

The hill country to the W is underlain by hard limestones, softer marls, and other carbonate rocks of Cenozoic age. Terra Rossa soils have developed on the harder carbonates with Brown Rendzinas on the marls. With increasing aridity to the SW, calcareous desert-steppe lithosols predominate.

The soils in valleys, plains, and plateaus are derived from sediments of varying consistency which have been broken down by weathering processes. In the moist areas, dark colored Grumusols are most common. In arid areas such as the Dead Sea Rift, soils referred to as hammadas predominate. These soils are characterized by hardened surface covers underlain by finer material, often with saline layers. Because of the high evaporation rates water moves up through the soil. As the water evaporates, carbonates remain behind which cement the alluvial surface and form a calachie or calcrete surface.

Lithosols cover a large portion of the S Sinai which is composed of ancient igneous and metamorphic rocks (Beaumont et al. 1976: 42-44). Limestone Lithic Ermolithosols cover the central third of the Sinai. These soils are immature, thinly weathered, products of limestone bedrock.

Salinity is a common problem in many soil types of Palestine. Climate, soil texture, and depth to ground water are some factors which contribute to the problem (Dan and Koyumdjisky 1987). Well drained sandy soils are non-saline because their coarse texture permits salts to be leached. The salinity of soils in hill areas depends upon the rock type which is normally at or near the surface. Shallow soils such as Terra Rossas and Brown Rendzinas which are sited on harder rocks are more leached and less saline than soils formed on softer calcareous rocks. Soils with the highest salinity have been salinized by ground water and occur in poorly drained areas such as the lower Jordan Valley. Within a regional perspective, the least saline soils are in the N and W sectors of Palestine. Soils with moderately to extremely high salinities occur on the S and E frontiers where negative water balances occur.

**6. Water Resources and Water Systems.** In Palestine, a reliable source of water is a prerequisite for human survival and sustained economic activity. Nomadic migration patterns are often dictated by the seasonal occurrence and distribution of water in arid and semi-arid regions. Agriculture, including the types of crops and period of planting and harvesting was directed by precipitation. This was more pronounced during Natufian time in the Judean Hills, Galilee and Mt. Carmel where the wet (winter) and dry (summer) seasons display more regularity than in S Palestine.

Another significant aspect of water was its aesthetic value. It was a resource which was cherished during biblical times. Gardens were familiar landscape elements in Palestine (Semple 1931: 481) especially after Babylonian captivity when a new concept of horticulture was introduced. What could be more pleasant and serene than "gardens of flowers and fruit trees with pools of water therein" (Qoh 2:5-6) to greet a traveler? To such green retreats, water lent its beauty or it might serve for a bath as inferred from

the stories of Bathsheba (2 Sam 11:2–3) and the deuteronomic story Susanna. The recreation and refuge value, especially on hot summer days must have been a significant dimension of life in Palestine.

Orni and Efrat (1971: 441) estimated that an average annual total of 6,000 million m<sup>3</sup> of precipitation falls within the drainage area of Palestine. Additionally another 10,000 million m<sup>3</sup> is contributed by valleys draining into Israel. Of the total, 60 to 70 percent is evaporated or lost through evapotranspiration by vegetation and another 5 percent runs off to the Mediterranean Sea, Red Sea, and Dead Sea. The remainder percolates into the soil and rocks. Even here, however, a percentage finds its way to the seas. Therefore ground water and to a lesser degree surface runoff are the two practical sources of available water.

Ground water is defined as water contained in void spaces of underground strata which are either bedrock, unconsolidated sediments, or soil. The water is originally precipitated at the ground surface and infiltrates downward into the underlying strata referred to as aquifers. If the water encounters impermeable rock it accumulates and produces a hydrostatic pressure. Since strata are often inclined, the water slowly flows down a gravitational slope of the aquifer.

In Palestine, aquifers occur in bedrock as well as in alluvial sediments. The most productive aquifers are in sedimentary rocks, not the igneous rocks because of more pore space—hence higher water holding capacity. The most significant aquifers are those chalks, limestones, and sandstones of Cretaceous and more recent Cenozoic periods (United Nations 1982) which form the hill country E of the coastal plain.

In N Palestine ground water is replenished by precipitation on the exposed and tilted rock outcrops of the various sedimentary aquifers and is thus being annually resupplied. In the Negeb, Sinai, and Arabah regions ground water is replenished only by infiltration due to intermittent thunderstorms or flash floods. Here, most of the ground water is fossil water which infiltrated into the reservoirs in the geologic past (probably Pleistocene time) when pluvial conditions existed. Therefore, water resources are not being replenished in the arid regions, a condition which has recently encouraged the Israeli government to undertake the National Water Carrier project (Beaumont et al. 1988: 101–5) to transfer water from the N (Galilee) for irrigation projects in the S (Negeb).

Alluvial aquifers occur along gravel floored valleys. Here, rivers bifurcate and water rapidly percolates into the unconsolidated sediments. Most of these aquifers are less extensive and productive than the deeper rock aquifers. However, they are recharged by high discharging streams in spring and early summer. Most streams conduct water only after a rain and are thus ephemeral or dry riverbeds most of the time. A few streams are perennial due to year around flow which is modest at best during the dry summer months (e.g., Yargon, Nahal, Hadera).

Considering the role of water in every day life during biblical times, its relationship to regional settlement geography is yet to be detailed. In earlier times, Neolithic inhabitants in the upper Jordan Valley apparently had as a prerequisite to settlement, the presence of a perennial spring and good bottom land for agriculture (Anati 1963:

229). Water distribution and reliability dictated settlement in the N as well as in the S. A map of the distribution of springs (Schmorak and Goldschmidt 1970: v/2) reveals that springs with the highest water discharge occur on the carbonate hills (Cenomanian or Upper Cretaceous limestone, dolomite or marls) or along significant faults. Springs on the coastal plain and Negeb are not as abundant. This geographical distribution may have a significant factor for settlement favoring the highlands over the coastal plains.

A number of water systems and methods were used to procure water for the day to day domestic and economic needs of the inhabitants. Included are ephemeral and perennial wadis, springs, tunnels, and aqueducts. Kedar (1957a; 1957b) has outlined the utilization of water resources at Shivitah in the Negeb, which was inhabited between the 2d century B.C. to about the 8th century A.D. The entire economy of the agricultural village was based on the collection and storage of runoff from episodic rainfall. The ancient fields which totalled 7,945 dunams (10 dunams equal one hectare; 4 dunams equal one acre), were located in wadi beds and demarcated by dams or were located on adjacent channel banks. The wadi was the main source of water which was channeled down the gradient of the floodplain. A supplementary source was runoff derived from adjacent mountain slopes which was channeled onto the cultivated fields. A third source was runoff collected in cisterns and storage near the agricultural plots.

The numerous place names in Palestine beginning with *En* or *Ain* meaning “spring,” point to the water supply as the determining factor in locating a town or village such as En-gedi on the west side of the Dead Sea. The geology especially in the N favors the occurrence of springs. Limestone which has been fractured and tilted, and adequate annual precipitation provides a textbook setting for springs.

Springs occur where an aquifer is exposed and ground water flows onto the ground surface. The discharge may be a mere trickle or several liters per second. Undoubtedly springs were the focus of agricultural settlements which in many instances gradually evolved to urban centers. There was a preference of spring water for irrigation because it was cool and fresh, and because it brought no weed seed to the fields (Semple 1931: 439) as did water from streams. Also, wells dug near the coast of the Mediterranean or the Dead Sea were likely to yield brackish water. Initial occupation of Jerusalem was at Gihon (Ain Umm el Daraj), a spring which could provide 20 liters of water per person per day for 10,000 people (Wilkinson 1974: 33). Although the spring was difficult to defend against attack its productivity value outweighed the risk.

Larger, more permanent urban settlements came to rely upon external water sources to assure their water supply. While each dwelling had a cistern to store rain water from its own roof, the city provided public pools or reservoirs (Semple 1931: 563). Pools functioned as settling basins and were often linked with public baths that were often surrounded by porticos for lounging. The elaborate Pool of Siloam in Jerusalem, for example, had four such porticos.

Issar (1976) identified the technical evolution of the water supply to Jerusalem from natural springs to reser-

voirs. The improved procurement of water first began by enlarging and cleaning the water bearing rock layers of soil and rock debris. Over time the Gihon spring outside the city was connected to the Siloam spring. As the city expanded, the land was covered with buildings and the spring eventually dried up. Supplementary water sources included rain collecting pools in valleys above the city (Wilkinson 1974: 39–45) which improved the supply. Ben Sira boasts of the achievements of Simon the high priest (died ca. 198 B.C.): "In his days a cistern for water was quarried out, a reservoir like the sea in circumference" (Sir 50:3). The larger catchment areas were approximately one km<sup>2</sup>. The collected rainwater was transported to Jerusalem via aqueducts and tunnels in most cases.

An alternative water supply system favored by the Romans was the aqueduct which transported water overland. The coastal city of Caesarea Maritima was supplied by two aqueducts (Mayerson 1986), referred to as the high level and low level aqueducts. The high level aqueduct supplied water from two springs some 8 km NE of the port town. The low level aqueduct took its water from the Zerga River some 5 km N of Caesarea. The system as described by Olami and Pelag (1977) included shafts and tunnels, and was built and improved upon into the Byzantine era. In Caesarea there was a decided preference for external water sources rather than local wells. Perhaps saltwater intrusion, the lack of bedrock outcrops, and steep runoff slopes on the coastal plain forced the inhabitants to seek reliable and adequate water supplies beyond the local terrain.

### C. Human Geography

How the earth's surface is utilized by people is within the sphere of land use. With improved mapping techniques and monthly monitoring of terrain with aircraft and satellites the analysis of land has been the concern of diverse disciplines including geology, forestry, and urban and regional planners. Using the land also means modifying the land to serve one's needs. The changes in Palestine have significantly altered the natural landscape.

**1. Characteristics of Land Use in Palestine.** The land use of Palestine has unique characteristics and fundamental geographical traits. Here, modification of the natural landscape was initiated rather early. Whereas in the early stages humans lived in caves, by 35,000 B.C. they moved into more open environments. Hunting and fishing camps, now recognized as Natufian in age occupied sites along river banks and lakes as well as in hunting areas of the Negeb. Hunting and fishing were supplemented by some type of plant food since grinding stones and mortars as well as reaping knives were common artifacts of habitation sites. (Wagstaff 1985: 33). Near En Gav on the Sea of Galilee the discovery of a basalt mortar and pestle suggests that grains had been introduced by this time. The utilization of the land over the millennia implies that the distribution of natural vegetation is a mute topic except perhaps in deserts or remote highland reaches. It has been suggested (Baly 1987: 30) that by the early Bronze Age (ca. 2400 B.C.) the forests of the highlands were being harvested for timber.

A second land use characteristic is an abandonment and reoccupation rather than an evolving land utilization pat-

tern. Domestication and farm villages were well established in Palestine by 6000 B.C. However, there is a 1,500 year gap following this time, suggesting abandonment (Wagstaff 1985: 38). The reason for the change is not clear. Emigration by the population to districts further N or the return to a seminomadic life involving pastoralism are possible explanations (Mellaart 1975: 68). During the Crusades, Palestine and the Transjordan appeared prosperous. However, during the period 1500 to 1880 while Europe was experiencing a renaissance, devastation and desertion dominated the Palestinian landscape. In fact, the only apparent area which saw a population density increase during this time was a coastal strip of the Mediterranean S of Tyre (Hütteroth 1969).

A third characteristic of the regional land use is the intimate association between people and the physical attributes of the land. Frick (1985: 119–22) reviewed Webley's (1972) concept of settlement and concluded that the distribution of archaeological sites of agrarian land use societies in Galilee are positively correlated with soil types. The most arable soils are the Terra Rossa, Mediterranean brown, and alluvial soils. More importantly, archaeological sites with long settlement chronologies are associated with a diversity of soil types rather than with only one type of soil. Diversity of soils provided a diversity of crops which minimized the risk of crop failure. To be sure, other physical and economic factors have been important but the significance of the soil has been a keystone to land use. Early settlements (of Natufian Age), of course, occurred on the coastal plain and Judean areas. However, there was a shift in preference for the Judean Hills, Galilee, and the highlands of Mt. Carmel. Although the sites are located on Terra Rossa or basaltic soils, the attractiveness of the highlands may have been the natural presence of wild edible vegetation (Hassan 1977). Likely candidates are two-row barley (*Hordeum spontaneum*) and emmer wheat (*Triticum dicocoides*). Initially, natural stands of these cereals represented a natural vegetation resource not unlike preferred soil types or the location of natural freshwater springs.

Finally, immigration is a valued source of innovation and the diffusion of ideas, as the recent agricultural changes in Palestine indicate. This characteristic underscores the significance of a cultural rather than a physical attribute in the development of the landscape. It may also make it quite clear that the physical attributes of the landscape such as soil and climate do not completely dictate habitation and land use patterns.

Both hills and arid lands attracted settlement and provided a livelihood. Agricultural terraces were probably in use by the MB I period. Their utilization provided a more efficient means of coping with the undulating topography of the highlands of Judea, Samaria, and Galilee and made agriculture possible (de Geus 1975: 70). A second cultural land use innovation was the management of water. Miller (1980: 331–32) suggests that irrigation may have been practiced in Jericho in the Pre-pottery Neolithic A settlement (late 9th to 8th millennium B.C.) within the rain shadow of the highlands. Between the 2d century B.C. and the 7th century A.D., periodic, yet elaborate irrigation networks were established around Ovdad (Aboda) in the Negeb. These examples suggest that the land use charac-

teristics of Palestine were a product of physical resources and cultural innovation.

**2. Settlement Patterns.** The location of settlement is determined by a variety of physical and cultural factors. Hostile environmental elements such as topography, lack of water, or poor drainage tend to be unattractive. Conversely, gentler slopes, springs with reliable flow throughout the year, and arable lands encourage settlement. Amiran (1953: 194–95) recognized contrasting viabilities between towns on the coastal plains and those on the highlands. All important highland towns of today have historical antedecence and are centuries old (Cressey 1960: 487). These settlements have had uninterrupted histories presumably because of their relatively defensible geography. In contrast, settlements on the coastal plains have experienced vacillating periods of growth and periods of demise as the political environment changed. Whenever conditions deteriorated, settlement in the coastal plain became marginal whereas highland settlements maintained or perhaps gained in importance.

The shifting of settlements was not only altitudinal between the coastal plain and adjacent hills but lateral as well. Gophna and Portugali (1988) examined the settlement geography from the "Ghassulian" Chalcolithic to the end of the MB from 4000 B.C. to 1600 B.C., a span of 2,400 years. Based on the location and size of archaeological sites, the core of Chalcolithic settlement was in S (Irano-Turanian S) Palestine and the peripheral zone was in the S sector of the plain. In contrast, the primary area of settlement during the MB was in the N or central part of the plain. A lateral settlement reversal had occurred on the plain. As noted elsewhere, prior lateral shifts due to the shifting boundary of aridity also occurred particularly in S Palestine.

The above analyses reveal the ephemeral nature of settlement in Palestine. Many analyses of settlement patterns, whether ancient or modern, underscore the disproportionately high frequency of abandoned sites. At the beginning of the 20th century there were 329 active villages in Galilee and 460 ruined sites (Schwobel 1904: 96). Randall (1955: 117–18), noting that in 1944 there were 1,051 inhabited sites compared to 2,048 abandoned sites and 223 temporarily occupied sites, suggests that a possible explanation for the fluid settlement pattern is the location of Palestine between the more sedentary Mediterranean culture and the nomadic character of the Middle Eastern desert occupants.

The concern for safety in border areas to the S and E has been a potent factor in settlement patterns over time, as well as the demographic character of towns. Bedouin raids had created repeated occupation and abandonment of border settlements. The village of edh-Dhahitiyeh, the southernmost village on the road between Hebron and Beer-sheba in S Palestine, experienced several periods of occupation and decadence.

Albright (1943: 158–59) identified four periods of occupation ranging from 200 to 600 years between the 23rd century B.C. through 1277 A.D. Between each period of active settlement a hiatus occurred. Amiran (1953: 69) found a similar pattern of use and abandonment of this settlement which has continued up to the present day.

The number and size of border settlements were af-

fectured by raiding parties. The demographics of border villages suggest they were larger but fewer in number and had more land under cultivation. A comparison of village population of the Hebron area and Jerusalem to the N supports this view. In 1931, four percent of the villages in the Jerusalem area had 2,000 people (Amiran 1953: 71). Also 85 percent of the Hebron villages managed 10,000 to 25,000 dunam (1 dunam = 0.247 acres). In the Jerusalem area only 20 percent of the villages maintained a similar sized area. The border settlements were essentially a coalescence of many small villages which promoted security. During more peaceful conditions an increase occurred in the number of villages.

Periods of stability may be viewed not only in political terms but in physical conditions as well. The S and E border of Palestine (i.e., the Negeb and Transjordan) are what J. Gottmann referred to as the "pioneer fringe" of Palestine. As the term implies, the pioneer fringe is a region of marginal resources, especially physical. The frontier settlements discussed above are located in the pioneer fringe, a zone of unreliable precipitation. During periods of extended aridity, the security of villages and cropland are stressed by nomadic pastoral populations. If irrigation systems are not in place, villages, particularly larger villages, may have to be abandoned.

To summarize, settlement characteristics of Palestine present contrasting histories in the highlands and the coastal plains. The mountain villages feature more continuity and stability in spite of perhaps less favorable local physical circumstances such as agricultural land use and water resources. Such sites are less difficult to defend against aggressors. Amiran (1953: 193) suggests many mountain villages have had a continued occupancy dating back to the 2d millennium B.C., reflecting continued well-being and secure physical and social environment. The coastal plain villages experienced periods of instability causing periodic deterioration and a decrease in importance. During periods of economic well-being, however, the coastal towns did emerge as more economically viable population centers.

**3. Settlements and Topographic Settings.** Palestine offers a wide variety of topography and climatic regions for settlement. Contrary to a basic geographic concept, in Palestine the flatter coastal plains were not always favored for settlement compared to the hill country to the E (Karmon 1956). Historically, with irrigation extending southward the pioneer fringe has been pushed farther into the Negeb and the opportunity for settlement in more marginal lands has improved especially within the past few decades. However, as discussed above the extension of the fringe occurred many times in the past, and the present is, in essence, a reflection of the past.

In spite of the 20th-century cultural innovations, relationships between settlements and topography are evident. Amiran (1970: 11/2) noted in detail the topographical siting of settlements. Four morphologic settings are identified with several adaptations. Settlements may be in valleys, either on the floor or on an adjacent terrace or slope. A hilltop or acropolis-type site occupies ground which is as high as possible. In this second category villages on low hilltops are included. A third type of setting is a spur or an elongated ridge. In terms of elevation, it is located

between valleys and mountain tops. Settlements located on extensive flat ground is a fourth topographic setting.

The location of each setting has distinct advantages. Valley bottoms normally have deep soil and the best agricultural land in an area. Many of the larger basins and valleys originated through faulting. Such breaks created ground water springs such as Ramah in lower Galilee. Hill-top settlements and those on ridges have an obvious advantage with regard to security. The mountains and hills of Nazareth consist of semipervious chalk and marl. Through weathering, a substantial soil cover evolved and extended up the mountain slopes attracting settlers to higher elevations. Flat land normally ideal for agriculture may be susceptible to inundations following prolonged winter rains. Furthermore, settlements on flat plains also pose security problems. The location of an Arab village on flat, exposed ground, was not common. The deposition of extensive sand dunes, poor drainage, the lack of natural harbors (Karmon 1956: 35), and invading forces have made permanent and prolonged coastal plain settlements less tenable. Today however, the coastal plain is the area of the largest concentration of urban population (Amiran 1961) and has the largest number of towns. Jerusalem, located in the hills, was the primary city of Palestine for many centuries. However, since 1930 Tel Aviv on the coastal plain became the region's primary urban center.

**4. Landscape Modification.** Even a casual view of Palestine would quickly reveal the lack of natural landscape or a landscape which has been completely modified by people. Isolated exceptions may perhaps locally exist in the Negeb or in the Transjordan. Landscape changes are particularly pronounced in areas of poor drainage and in what had been forested areas. It is generally agreed that prevalent scrub vegetation is a degraded relict of the original wooded cover. Forest degradation probably began by Neolithic time and continued into the present century. When the armies of Judah and Israel invaded Moab "they felled all the good trees; till only its stones were left" (2 Kgs 3:25). Excavations at Jericho suggest serious sheet erosion resulted from forest clearing during the EB (2600–2300 B.C.) (Baly 1974: 116). Indeed as early as the MB the forested slopes were replaced with terraces to hold the soil and retard erosion. Perhaps due to the severity of deforestation in Palestine, timber was imported from present-day Lebanon (Mikesell 1969: 18). About 950 B.C., Solomon requested from the king of Tyre "as you dealt with David my father and sent him cedar to build himself a house to dwell in, so deal with me" (2 Chr 2:2—Eng 2:3).

A second modification of the natural landscape has been the drainage of swamps and marshes. Wetlands were viewed with tribulation and apprehension. The kurkar ridges paralleling the coastline have impeded the drainage from the adjacent uplands creating marshy lands. In earlier days the coastal plain was generally malarial, difficult to cross and lacking in stone for building. When Napoleon invaded Palestine the French army elected to take roads farther inland to avoid the wetlands of the Plain of Sharon (Amiran 1953: 198). The Hula Valley located N along the Rift Valley was another wetland area plagued with mosquitos as well as severe winter flooding and occasional Bedouin attacks. Wetlands were viewed as unfavorable natural habitats to be avoided rather than managed. Certainly,

place names such as Crocodile River did not encourage settlement. In spite of the negative historical connotations associated with wetlands, the agricultural potential was realized early in this century. The land was flat and compatible to mechanized farming, and both subsurface water and drainage techniques were available. Thus, large drainage projects transformed the wetlands to agricultural land.

A third significant landscape transition has been a redistribution of water resources. Water retention and storage occurred in very early times but irrigation techniques developed and greatly improved in the Roman and Byzantine periods. These innovations are discussed elsewhere in detail (see above B.6).

**5. Agriculture.** The primary purpose of the physical landscape modification such as the clearing of the land, was directed towards farming. By 7000 B.C. emmer wheat (*Triticum dicocoides*) displayed morphological signs of domestication in Palestine. Farming villages became more numerous and spread beyond the limits of the present-day permanent dry-farming zone. The exploitation of seasonal flood waters and the construction of temporary dams may have been utilized at an early date (Miller 1980).

The Chalcolithic Period (ca. 4000–3000 B.C.) was a time of canals and dam construction. Crops of the 4th millennium included wheat, barley, durra millet, flax as well as familiar Mediterranean products such as olives, figs and grapes (Whyte 1965: 99). By the so-called Patriarchal Period in the 18th century B.C. agriculture must have attained a high standard. Canaanite settlements during the Early and Middle Iron Age (1200–586 B.C.) were mostly situated on foothills adjacent to fertile plains where springs and wells provided the necessary water. With few exceptions, the mountainous regions were not occupied by a sedentary population before the arrival of the Israelites (Whyte 1965: 99). A strong administration safeguarded the flourishing agricultural community and protected it against nomadic raids.

Farming was the keystone of Israelite society. The three major feasts—the feast of unleavened bread (April), the feast of harvest (May), and the feast of ingathering at the end of the year (i.e., the grape harvest) were all feasts related to farming (Exod 23: 14–17). These feasts represent principal products of Palestine farming. The natural grasslands were replaced with fields of wheat and barley, the scrub woodlands with the vine and olives on the pre-existing highland forests (Baly 1987: 30). The olive, wheat, and grape are traditional Mediterranean crops so vital to the Israelites that settlement occurred only where all three could be cultivated. Other common products included dates, figs, cucumbers, mint, cummin, almonds, and pomegranates (Baly 1987: 31–32). Sheep, goats, donkeys and camels were common livestock of the time.

The life of the Palestinian agriculturalist was difficult. The weather conditions to which shepherds were exposed displayed extremes. "By day the heat consumed me and the cold by night, and my sleep fled from my eyes" (Gen 31:40). Crops were threatened by locusts (Amos 7:1; Joel 1:2–10), hail (Ps 78:47), or by droughts and mildew (Hag 2:17). Constantly, the threat of famine due to droughts or the aftermath of an invading army was likely on the mind of the farmers in Palestine (2 Kgs 6:24–29; Jer 14:2–6).

Early farming was fundamentally directed to producing

a mixture of products. Such mixed farming guaranteed the agriculturalist a harvest during inclement times as well as during good times. Essentially, this rather uncomplicated activity occurred until the recent period except when settlements were abandoned. See AGRICULTURE.

**6. Towns.** Although urban settlements were reasonably well established in Palestine at least since the Early Bronze Age (ca. 3000 B.C.), an increase in settlements occurred during the 4th millennium, perhaps encouraged by canal and dam construction. Wagstaff (1985: 99) suggests this was followed by some concentration of population, the prelude to the emergence of "fortified cities with high walls, gates, and bars" (Deut 3:5) which, by the 2d millennium, became widespread.

Trade and commerce, albeit on a local scale at first, formed a principal economic function of towns. Farmers from surrounding areas brought products to sell and trade. On a more externalized scale in towns such as Hebron and Beer-sheba, hill-farming produce was exchanged for the goods of nomadic herders (Orni and Efrat 1971: 309).

Another function of towns was related to the administrative and political control of a region. Town residents often included regional landlords, nomadic chiefs, and religious and administrative officials. Solomon (ca. 961–922 B.C.) established "cities for his chariots, and cities for his horsemen" (1 Kgs 9:17–19) in his kingdom. Towns, the vestiges of which are often flat-topped hills or tells, physically encompassed a small area with relatively high densities. Several thousand inhabitants lived within a few hectares. Two important populous cities, Hazor and Jerusalem, barely covered 7 hectares (Orni and Efrat 1971: 315). The compactness within such towns was a result of the need to concentrate the human resources on the defense of the walled town. Space between dwellings was wide enough to allow passage of a donkey, and houses were integrated with the town wall (Josh 2:15).

**7. Road Network.** Although agriculture was the main activity in Palestine during biblical times, roads were a significant cultural feature in the landscape which allowed movement and trade from one place to another. Ancient roads were simple tracks, muddy in winter, dusty in summer, and often poorly maintained. Road construction was limited to removing boulders and levelling the surface—"build up, build up the highway, clear it of stone" (Isa 62:10)—not much more.

For an illustration of the distinct road pattern in Palestine during biblical times see ROADS AND HIGHWAYS (PRE-ROMAN). Two geographical factors emphasize the character of the road network in Palestine. In a geopolitical context, the region is situated midway between the two great river valleys in the Middle East. Both Egypt and Mesopotamia were centers of political influence. These powers often met in Palestine, mostly in strife, and the control of the road network was of strategic importance (Orni and Efrat 1971: 197).

In a physical context, the road network today generally follows the pattern established in the past. The network was dictated by topography and rock type. The coastal plain, hill country, and Dead Sea Rift which make up the main elements of the landscape are all oriented in an approximate N–S direction. Likewise, the principal flow of

traffic was N–S in Palestine. In the hill country W of the Dead Sea Rift, folded ridges composed of soft porous chalk of upper Mesozoic age (Senonian chalk) are aligned N–S and favored for roads. The Senonian chalk has been worn down by pedestrians and vehicles into a hard smooth surface devoid of cumbersome boulders and with good drainage. Baly (1974: 22) notes that passes along the hills of Carmel all trace the narrow Senonian outcrops, and many N towns (e.g., Tirzah, Samaria) are sited at junctions of similar valleys.

Topographic controls also directed road patterns in the lowlands. In spite of the favorable topography of the Plain of Sharon the vitally important *Via Maris* connecting Egypt and the N Levant was located to the E on higher ground to avoid winter flooding which could inundate sections of the road for many days or even weeks. An equally important prerequisite was the availability of water for man and animals along the routes. Thus the roads had to go where springs and wells were to be found.

Roads along both sides of the Dead Sea Rift paralleled faults and rock exposures where numerous springs provided water for travelers. Some 2,000 years ago qanats tapped underground water in the Arabah valley (Issar 1985: 107) S of the Dead Sea for travelers and local users.

Two roads of interregional significance are "the way of the sea" (Isa 9:1) or *Via Maris*, and the King's Highway (Aharoni 1967: 39–57). The *Via Maris* was used during all historic periods by travelers including messengers, caravans, and armies. Coming eastward out of Egypt, the road paralleled the Mediterranean Sea, then continued northward along the Plain of Sharon. Here it turned northeastward and transversed the highlands to Damascus and along the Fertile Crescent to Mesopotamia. The King's Highway diverged from Damascus and ran southward along the length of the highlands of Transjordan E of the rift valley to the port of Elat. During the Israelite Monarchy the road provided an artery of commerce with Arabia (Aharoni 1967: 52).

Intraregional roads which joined various regions of Palestine generally were oriented E–W joining the main N–S road network. Contrary to this general pattern is the Hill Road which runs along the divide from Beer-sheba northward through Hebron and Jerusalem to Shechem. From Shechem it branches E and W. In overview, the complexity and density of the network in the uplands is greater than the areas to the S and W as well as the coastal plain, suggesting the traditional center of commerce and economic activity was in the central region.

C. NICHOLAS RAPHAEL

## EARLY JEWISH GEOGRAPHY

Authors of the biblical texts and early Jewish literature described their conceptions of the configuration of the world and the land of Israel in various ways. These descriptions often reflect the political and religious ideologies of the writers and their times.

- A. Mental Maps and Models
- B. Geographical Texts
- C. "Maps" of the World
  1. Early Hebrew Cosmology
  2. The Rivers of Paradise
  3. The Table of Nations
  4. *Jubilees*
  5. Josephus
  6. Other Catalogues of Nations
  7. *1 Enoch*

## D. "Maps" of the Holy Land

1. The Short Biblical Boundary Texts
2. The Biblical Borders of the Land of Canaan
3. *Genesis Apocryphon*
4. Targumim
5. Rabbinic Definitions

## A. Mental Maps and Models

Much has been written about early Jewish concepts of time and history, and less has been written about early Jewish concepts of space and spatial organization, yet the latter topic is as important as the former for an understanding of the early Jewish mentality and worldview. Human beings appear to have a fundamental need to project order onto the space in which they live and move: they process spatial data received through the senses, relating one element to another and abstracting a mental map or model which functions as a constant frame of reference for all their activities (Gould and White 1986). Spatial data may be ordered in a variety of ways. Religious categories provide an old and powerful ordering system. Mountains, rivers, even countries, may be marked off as "holy," and maps constructed on a grid of holy places. *Degrees* of holiness may also function to differentiate space: e.g. a simple model of the world is generated by the notion that the Land of Israel is holy in contrast to the rest of the world; Jerusalem is holier than the rest of the Land; the Temple precinct in Jerusalem is holier than the rest of Jerusalem; and the holy of holies in the Temple is holier than the rest of the Temple. Geographers have become increasingly interested in these mental maps. They are less tied than they used to be to the idea that the only "real" map is one that results from careful surveying and mathematical projection. Geography is in part a behavioral science and geographers find it useful to project mental maps onto paper. Such maps, when compared with scientifically mapped space, may help to explain geographical data, e.g. population distribution or communication patterns (Abler and Adams 1971). Early Jewish geographical texts should be seen basically as exercises in cognitive mapping: they represent attempts to impose order on the chaos of spatial perception. The early Jews themselves probably occasionally drew out their own mental maps and models. The fact that none of these survive is not an irreparable loss. If we have sufficiently detailed verbal descriptions, which convey clear visual images (whether or not they were accompanied originally by drawn maps), we can translate these onto paper and compare them with "real" geographical space. It is important in this exercise not to denigrate too readily early geographical images, or to make too sharp a distinction between theological/mythological cartography on the one hand and real/scientific cartography on the other. *All* maps arguably express a worldview, some more explicitly than others. Even modern scientific maps, however objectively based on measurement and mathematics, are not always value-free, but can easily become the vehicles of ideology and propaganda.

## B. Geographical Texts

The foundations of early Jewish geography lie in the Bible. Following Aharoni (1967: 73–83) the geographical texts of the Hebrew Bible may be classified according to

their origin and function into three types: territorial administrative lists; itineraries of expeditions and conquests; historical geographical descriptions.

Territorial administrative lists are texts which, however used now in the biblical narrative, originated in the government and administration of ancient Israel. They are official documents which by their nature must directly reflect geographical reality. Two subtypes are involved: (a) boundary texts, probably derived from treaties between states and tribes (e.g. Num 34:1–12; Josh 15:1–12; 16:1–8; 17:7–9; 18:11–20; 19:10–14, 26–27, 29, 33–34); and (b) town lists, probably based on cadastral and population censuses (e.g. Josh 15:21–61; 18:21–27). Boundary texts and town lists differ in their representation of geographical space. In the case of the former, a series of border points is enumerated in consecutive geographical order. In the case of the latter, while points listed together probably belong to the same region, the principle of ordering may take into account other factors, e.g. town size.

As with territorial administrative lists, itineraries of expeditions and conquests directly reflect geographical reality. The ordering of the points is determined by the movement of the army or the caravan on the ground, but this may not always be dictated by simple topographical factors. Accounts of military campaigns or of expeditions were carefully preserved in royal or personal archives in the ancient world. They were of practical importance, since it might be necessary in the future to retrace the journey. Material possibly derived from such itineraries is preserved in 1 Kgs 15:20; 2 Kgs 15:29; 2 Chr 13:19; 26:6; 28:18. Noteworthy is the very ancient campaign itinerary in Gen 14:1–24.

Historical geographical descriptions, unlike texts in the other two categories, do not serve any obvious practical or administrative purpose. To that extent they can be seen as "pure" geography. However, as representations of geographical reality they have a serious drawback: in some cases they appear to have originated in attempts to organize the scattered geographical data contained in earlier narrative traditions, so they reflect first and foremost the world of the text, and only indirectly external geographical space. A number of them deal with such remote and inaccessible regions that they cannot be based on the firsthand experience of their compilers. Texts obviously belonging to this category are Gen 2:10–14 (the Rivers of Paradise) and Gen 10:1–31 (the Table of the Nations). Aharoni (1967: 76) also includes the roster of conquered Canaanite kings in Josh 12:1–24, and, controversially, the wilderness itinerary in Num 33:5–49 (see further Davies 1979).

These three categories apply equally well to most post-biblical Jewish geographical texts. The Bible played a central role in early Jewish education and scholarship, and much geographical information was conveyed in the form of commentary on the biblical geographical texts. Note, e.g., *Genesis Apocryphon's* detailed and geographically well informed interpretation of Abram's campaign in Genesis 14 (1QapGen 21:23–22:26; see further Alexander 1988: 105–107). The Table of the Nations (Genesis 10) and the Borders of the Land of Israel (Numbers 34) were the basic "maps" of early Judaism, continually re-edited to meet changing historical circumstances. A geographical litera-

ture per se, comparable in any sense to the writings of Eratosthenes, Ptolemy or even to Pseudo-Aristotle, *De Mundo*, does not exist in early Judaism. The most comparable are early medieval texts such as *Midraš Konen* or *Seder Rabba<sup>3</sup> diBēre<sup>3</sup>šit*, which belong to the rabbinic cosmographical (*ma<sup>3</sup>āšēh bēre<sup>3</sup>šit*) tradition (Sed 1981). In these works theological ordering is so powerful that the images of the world have been virtually distorted out of any relation to geographical reality.

C. "Maps" of the World

**I. Early Hebrew Cosmology.** The cosmographical references scattered throughout the Hebrew Bible imply a remarkably consistent picture of the world. The universe is divided into three levels: the heavens above, the earth beneath, and the primeval waters and Sheol (the abode of the dead) under the earth (cf. Exod 20:4). The surface of the earth is of limited extent: if one travels in any direction one will come, sooner or later, to its edges or boundaries—the *qaswē<sup>3</sup> ʿereš* (Ps 48:11; 65:6) or *qēšōt hāʾāreš* (Isa 40:28; Job 28:24). Although the expression "the ends of the earth" is often used vaguely in the sense of "distant lands" its original, literal meaning was not entirely lost (Stadelmann 1970: 134–35). The sky too has its outer boundaries (the *qēšōt haššamayim*, Jer 49:36; Ps 19:6), beyond which lies perpetual darkness (Job 26:10). The plane of the habitable earth was probably conceived of as a roughly circular disc. This notion, widespread in antiquity, would have initially been suggested by observation of the horizon. Several passages in the Hebrew Bible refer to the circle of the horizon: Job 26:10, "He has drawn a circle upon the face of the waters at the boundary between light and darkness"; Prov 8:27, "When he established the heavens I was there, when he drew a circle upon the face of the deep" (cf. *hūg šamayim* ["circle of the heavens"] in Job 22:7 = *hūg hāʾāreš* ["circle of the earth"] in Isa 40:22). The basic circularity of the earth may also be implied by the description of Jerusalem in a late passage in Ezekiel as the *ṭabbūr hāʾāreš* (Ezek 38:12). The meaning of *ṭabbūr* here has been much disputed, but according to one early tradition it refers to the "navel [i.e., center] of the earth." The Septuagint translates it by *omphalos*, "navel." Cf. the Aramaic *ṭibbūr*, "navel, umbilicus." The surface of the earth is divided into seas and dry land; the dry land contains numerous topographical features—mountains, deserts, valleys, rivers, and springs which were apparently thought of as welling up from the waters under the earth (cf. Gen 7:11).

The ancient Hebrews divided the earth into four regions which were named according to two main systems. The first system related them to the observer's body. The observer was imagined as facing east: E was then "front" (*qedem*: Gen 2:8); N was "left" (*šēmōl*: Gen 14:15); W was "behind" (*ʿāhōr*: Job 23:8); and S was "right" (*yāmīn/tēmān*: 1 Sam 23:24; Job 39:26). The second system named the cardinal points of the compass primarily in relation to the movement of the sun. E was the "place of sunrise" (*mizrah haššemeš/mizrah*: Num 21:11; Isa 41:2) or the "place of the going out" (*mōyā<sup>3</sup>*) of the sun (Ps 75:7); W the "place of the setting" (*ma<sup>3</sup>ʾarāb*: Isa 45:6) of the sun, or the "place of the going in of the sun" (*mēbō<sup>3</sup> haššemeš*: Deut 11:30). The etymologies of the remaining two points on this

system—*dārôm*, "south" (Job 37:17) and *šāpōn*, "north" (Jer 26:26)—are uncertain.

**2. The Rivers of Paradise.** The purpose of the description of the rivers of paradise in Gen 2:10–14 is to locate the Garden of Eden in which, according to the second account of creation, God placed the first parents of the human race. Most of the geographical names in this passage occur elsewhere in the Bible and some can be identified with reasonable certainty. The "map" described should not, therefore, be dismissed as fictional: it records a serious attempt to locate the Garden of Eden in real geographical space. The Garden of Eden is sited at the headwaters of four great rivers, the Pishon, the Giḥon, the Hiddeqel and the Perat. The "Perat" is unquestionably the Euphrates, and the "Hiddeqel" the Tigris. Since the enumeration of the rivers seems to be from E to W, the remaining two rivers must lie E of the Tigris. The Giḥon may be the Diyala (the land of Cush through which it runs being the territory of the Kassites: Akkadian *Kaššu* = *Kuššu* in the Nuzi texts), and the Pishon may be the Karkheh which flows out of the Zagros Mountains (Speiser 1959). These four rivers are said to diverge from a common source in the Garden which God planted in Eden (Gen 2:8)—the latter, apparently, being the broad area in which the Garden lies. See Fig. GEO.04. The alignment of the rivers is generally N-S, so the Garden of Eden must be located somewhere in the region of Armenia. The reference to Eden being "in the east" (Gen 2:8) should not be taken (as in later Jewish tradition) to mean that it lay on the E edge of the world. Rather it indicates a position E of where the author of Gen 2:10–14 lived.

Josephus (*Ant* 1.37–39) provides the only reasonably coherent post-biblical Jewish account of the rivers of paradise. He identifies the Pishon as the Ganges (the "land of Havilah" = India). The Giḥon is the Nile, presumably because the land of Cush, through which it flows, is taken in its normal biblical sense of Ethiopia. The other two rivers are the Tigris and the Euphrates. Josephus seems to imply that all four of these rivers originate in the waters of

GEO.04. The rivers of Paradise according to Genesis 2.

the Ocean, which he describes as "the one river which encircles the whole earth," and that this one river (Ocean) originates in the Garden of Eden, which he probably located in the extreme E of the world. Other early Jewish texts also identify the Gihon as the Nile (1QapGen 21:15 and LXX to Jer 2:18; cf. Ecclus 24:27). The Palestinian Targumim to Gen 2:11 (Codex Neofiti I and Pseudo-Jonathan) equate Havilah with India, though they do not go so far as to say which Indian river is the Pishon. Later rabbinic tradition maintained that the Pishon was the Nile. This view seems to have been based on deriving *pīšōn* from *pīštān*, "flax" (an etymology proposed in *Gen. Rab.* 16:2, without mentioning the Nile). The Pishon is so called, writes Rashi, "because it grows flax, for it is said with regard to Egypt, 'The workers in combed flax will be in despair' (Isa 19:9)" (see also Saadya's Arabic translation and Nahmanides to Gen 2:11).

**3. The Table of Nations.** The Table of Nations in Genesis 10 gives the most comprehensive biblical account of the inhabited world. As it stands, the text combines both Priestly (P) and Yahwistic (J) material, the former being found in vv 1a, 2-7, 20, 22-23, 31-32, the latter in vv 1b, 8-19, 21, 24-30. Note the contradictions: according to P the Lydians are descended from Shem (v 22), but according to J they are descended from Ham (v 13); according to P Havilah is descended from Ham (v 7), but according to J he is descended from Shem (v 29). The P-source, which appears to be intact, forms the highly regular, stylized framework of the Table. Its compiler uses the principle of genealogy (derived from family and tribal history) to organize certain geographical data, viz., the nations of the world known to him. He arranges them in families, relates them in terms of descent from common ancestors, or from each other, and, by tracing them back to Noah's three sons, Shem, Ham and Japheth, integrates them into the narrative of sacred history. See Fig. GEO.05. Though the organizing principle appears to stress ethnicity (note v 20, "by their families, their languages, their lands, and their nations"; cf. vv 5, 31), it is political realities that are often reflected in the Table. Thus the Canaanites, despite being for the most part ethnically Semites are said to be descended from Ham, not Shem (v 6), presumably because the land of Canaan was regarded by the compiler of the P-Table as related politically to Egypt, one of Ham's other sons. Similar political considerations (now rather obscure) may explain the curious descent of Lud (= Lydia) and Elam from Shem (v 22).

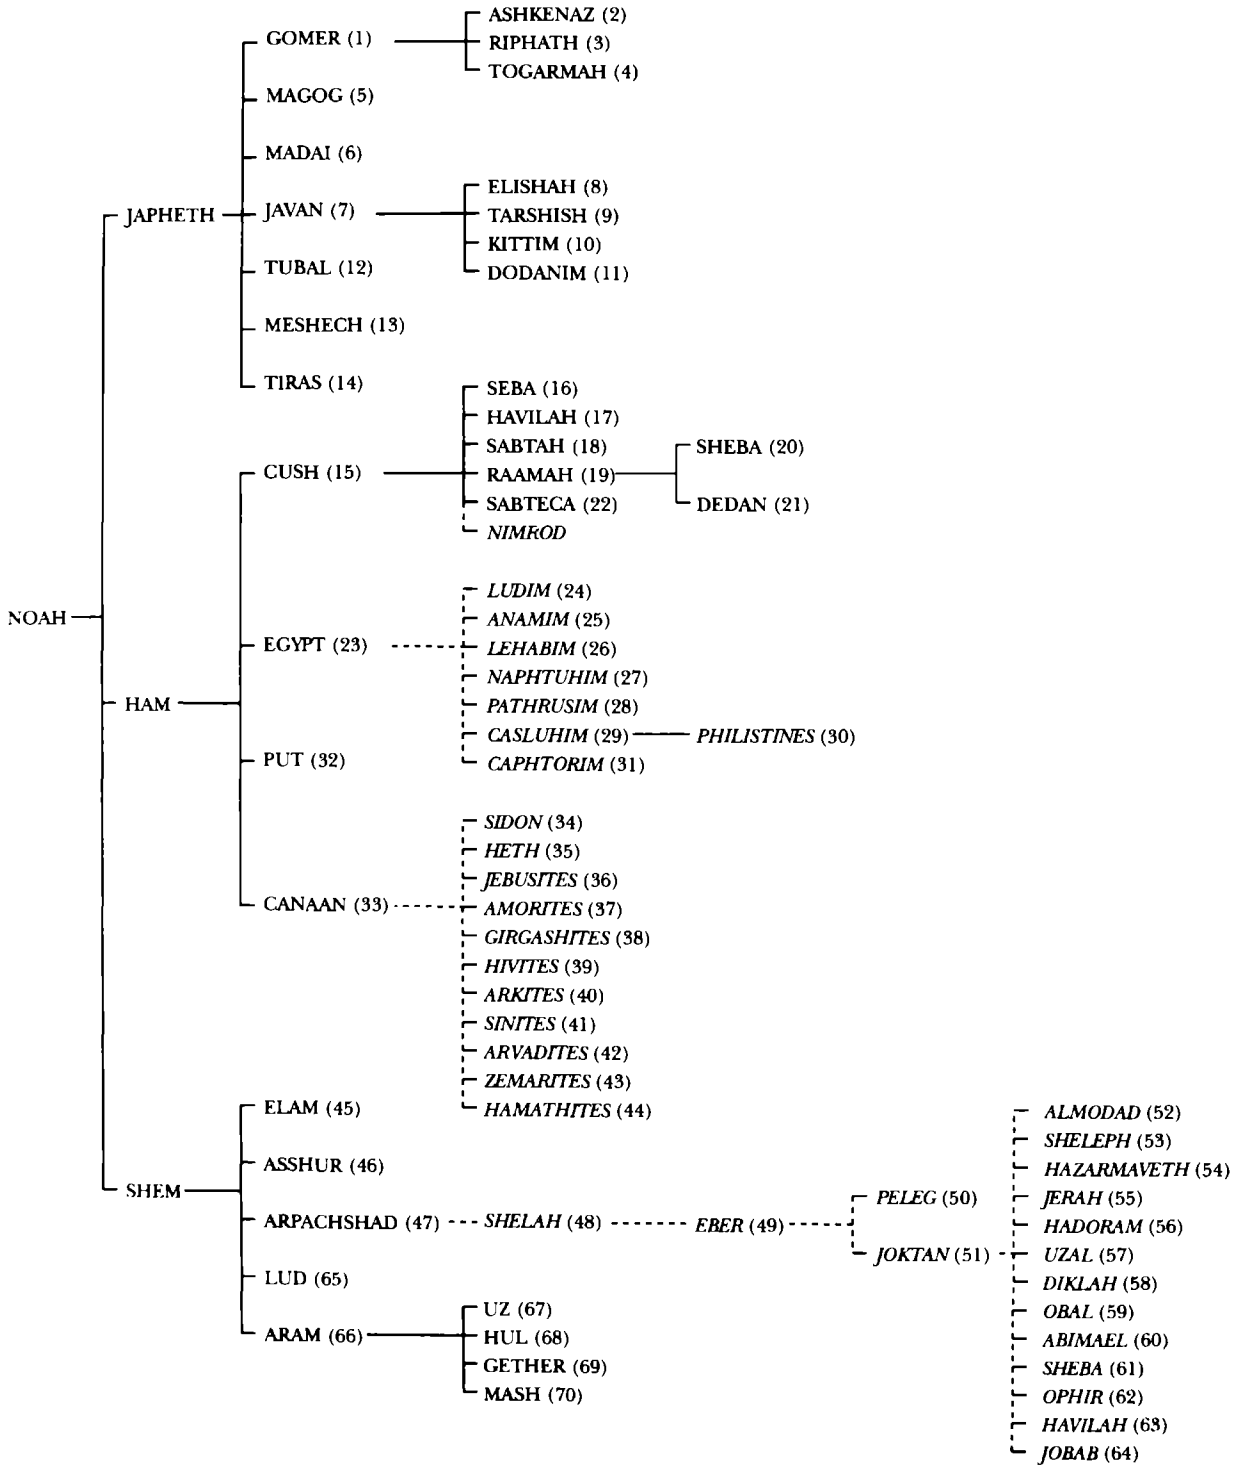

The P-Table probably originated in the 7th century B.C.E. Its geographical horizon extends from the Black Sea in the N to Nubia in the S; from the Iranian plateau in the E to Spain in the W. There is, however, nothing on the P-Table itself to locate the various nations on the earth's surface, to relate them to the reader's own position in space, or to orientate him geographically. It is assumed he already knows where at least some of them live. Von Rad (*Genesis* OTL, 139) speculates that the Table may have been accompanied originally by a drawn map, and notes that "the final form of this Priestly table may be contemporaneous with Anaximander's map of the world" (Anaximander of Miletus [ca. 610-540 B.C.E.] was, according to Eratosthenes [in Strabo *Geog.* I 1.11], the first Greek to produce a world map). This is very uncertain. However,

the fact remains that in order to tie the genealogical schema down to geographical reality the reader must already know at a minimum where some of the nations in each of the three main groups are located relative to his own position in space. If he has this information he can then very roughly locate the other nations by assuming that the closer the nations are on the genealogical tree the closer they will be on the ground. A genealogical tree as a geographical device cannot cope as well as a drawn map with spatial relationships, but it can show, in a way that a primitive map cannot, the political, linguistic, and cultural connections between peoples.

A redactor filled out the P-Table of Nations with material drawn from a J-Table. The J-Table, which was older than the P-Table and probably more restricted in geographical horizon, presumably originally covered all three sons of Noah. Only fragments of it now survive in Genesis 10; nothing remains of its account of Japheth's offspring. The purpose of these J additions is broadly to link the P-Table more directly with Israel's history. The redactor uses the J-source to relate two peoples to the Table—the Babylonians and the Philistines—who played a major role in the sacred history. The Nimrod traditions (vv 8-12) deal with the Babylonians; the additional information about Egypt's descendants (vv 13-14) deals with the Philistines. The redactor also uses the J-source to rectify the rather startling fact that Israel's relation to the P-Table is unclear. The J-version indicates that he is descended from Arpachshad through Eber (vv 24-30). Unlike the P-Table, the J-Table does to some extent attempt to tie the genealogical schema to geographical space: note vv 19 and 30.

**4. Jubilees.** The Table of the Nations formed the basic "world map" of the Jews in the biblical and postbiblical periods, and it was constantly reinterpreted to fit the changing state of their geographical knowledge. The assumption was that, being Scripture, the Table must be an accurate and comprehensive picture of the world. As the political scene shifted and new peoples came within the Jewish horizon, they were related to the Table. It was inconceivable that they should not be there somewhere (the view that the Table of the Nations is a comprehensive account of the nations of the world was held by Christians as well as Jews, right down to modern times. After America was discovered a debate raged as to whether or not the American Indians were "Adamites," and if they were, how they could be linked to Genesis 10 [Bickerman 1952: passim and esp. 77]).

If we exclude its simple reuse in 1 Chr 1:4-27, the earliest and most significant interpretation of Genesis 10 is in *Jubilees* 8-10. *Jubilees* (which dates from the mid 2d century B.C.E.) attempts to project the genealogy of Genesis 10 onto a standard world map of its day. It has been suggested that the author of *Jubilees* actually drew a map, but (as often happens with complex diagrams in manuscripts) it has not survived. Whether he did or did not, he unquestionably had an image of the world that can be expressed in the form of a map (Hölscher 1949; Alexander 1982). His description of the N coastline of the Mediterranean (9:11-12), with its three "tongues" or bays (the Aegean, Adriatic and Tyrrhenian Seas), illustrates how sharply he visualized the world. *Jubilees'* "map" is basically the old Ionian world map accommodated to the Bible. It

GEO. 05. The Table of the Nations according to Genesis 10. P-source in roman type; J-source in italics.

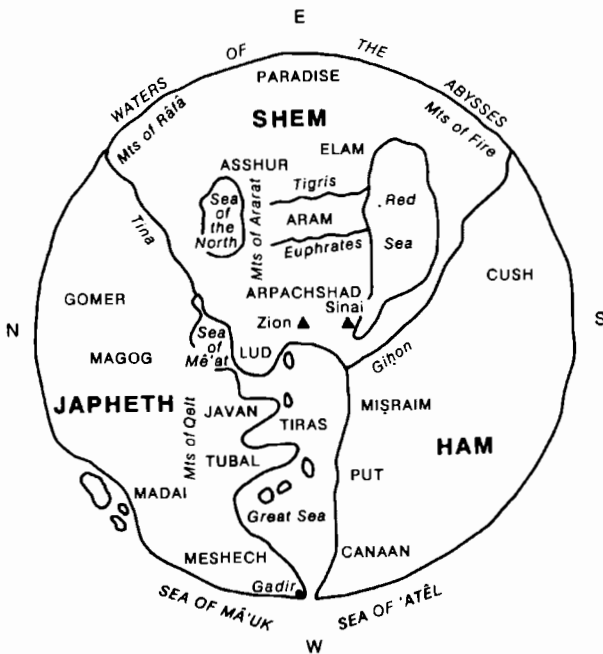

envisages the inhabited world as a roughly circular land mass surrounded by ocean. The center of the world—its “navel” (*omphalos*)—is Zion, not Delphi, as on the Ionian maps. A N-S median runs through Zion and Sinai; an E-W median through the Straits of Gibraltar, Zion and the Garden of Eden. The map is orientated with E at the top. The three continents of the Ionian geographers—Europe, Asia and Libya (= Africa)—are correlated with the three sons of Noah: Japheth = Europe; Shem = Asia; Ham = Libya. This is shown by the fact that the boundaries between the territories of the three sons correspond precisely to the boundaries between the three continents according to one school of Ionian geography. Between Europe/Japheth and Asia/Shem, the River Tina (= Tanais, i.e. the Don) marks the boundary; between Asia/Shem and Libya/Ham it is the River Giḥon (i.e. the Nile); between Europe/Japheth and Libya/Ham it is the Straits of Gibraltar. Having established this correlation the author of *Jubilees* then distributes the sons of Shem, Ham, and Japheth appropriately across their respective continents. See GEO.06.

The *Jubilees mappa mundi* is more than a piece of disinterested cartography which tries to reconcile the Bible with the science of its day. Like many other maps, it is a political statement. *Jubilees* stresses that the division of the world after the flood was solemnly agreed to by the sons of Noah: “So Noah divided their lands among their sons in the presence of their father Noah; and he bound them all by an oath, putting a curse on anyone that tried to seize what had not fallen to him by lot. And they all said, So be it, So be it, for themselves and their sons for ever” (*Jub.* 9:14). *Jubilees* notes that, according to his neat schema of conti-

nents, two nations were out of place on the map. Madai, not liking his allotted territory in the N-W of Europe, negotiated with Elam, Asshur and Arpachshad to be allowed to settle within the patrimony of Shem (10:35). Canaan also did not take up his allotted portion, which was in N Africa. Instead he violently seized “the land of Lebanon as far as the river of Egypt,” which was within the patrimony of Shem, and was roundly cursed by his father and brothers for so doing (10:27–34). That land had been allotted to Arpachshad, the ancestor of Abraham (9:4). *Jubilees*’ aim in all this is, presumably, to prove that the Jews have an ancient right to settle in the “land of Canaan” (it was the Canaanites, not themselves, who were usurpers), and to justify the territorial expansion of the Hasmonaean state. It has also been suggested that it is significant that the *Jubilees* map excludes Javan (the Greeks) from the middle east. They do not appear to be assigned territory even in Asia Minor, which is given as the patrimony of Lud, son of Shem (9:6, 10). This could be seen as an attack on Greek political hegemony and settlement in the Middle East (Schmidt 1988: 26f).

The *Jubilees* world map is the earliest example of a type of world map that, despite the advances of scientific geographers such as Eratosthenes and Ptolemy, predominated in European culture down almost to the time of Columbus. Its essential features are reproduced in a series of Christian T-O maps, such as Richard of Haldingham’s famous and elaborate Hereford Map (ca. 1290 C.E.) (Bagrow and Skelton 1964; Almagià and Destombes 1964). It is unclear whether the Christian T-O maps go back to the lost drawing of the *Jubilees* map, or whether they are derived from the written text of *Jubilees* alone. *Jubilees* was certainly known to some Christian authors in its Greek translation, and it seems to have influenced the patristic *Diamerismos* literature, which is concerned with dividing up the world among the sons of Noah (von Gutschmid 1894; Bauer 1906).

**5. Josephus.** Josephus’ detailed interpretation of the Table of the Nations in *Ant.* 1.122–47 resembles *Jubilees*’ in a number of ways—e.g. Josephus, like *Jubilees*, outlines first the broad territories of Shem, Ham, and Japheth, before dealing in detail with their descendants (Franxman 1979: 101). However, in two important respects Josephus differs from *Jubilees*. First, he does not follow *Jubilees*’ schema of correlating the three sons of Noah with the three Ionian continents. He tends to describe dispassionately the world as it is, not prescribe for how it should be. Thus he appears to see nothing wrong with the fact that Japheth’s and Ham’s sons spill over into Asia (*Ant.* 1.122,130). Nor is there any hint of the accusation that Canaan usurped the land in which historically he settled, nor any attempt to exclude the Greeks from Asia Minor: Iauanos (= Javan) is identified as “Ionia and all the Greeks” (*Ant.* 1.124), and Iauanos’ son Tharsos (= Tarshish) is located in Cilicia (*Ant.* 1.127). Second, Josephus has an essentially toponymical approach to the Table of the Nations. He is primarily concerned with discovering the modern equivalents of the biblical names, not with locating the various peoples and places on the surface of the earth. He seems to assume that once he has told the reader the modern equivalent the reader will be able to use his own knowledge to put the term in question on the map. *Jubilees*, by way of contrast, is

GEO.06. *Jubilees Mappa Mundi*.

primarily concerned with locating the biblical nations on the world map. It uses only the biblical names, and it seems to assume that once they are located on the map the reader will be able to work out the modern equivalents.

Toponymy dominates Josephus' exposition, and in a number of interesting asides he makes clear the principles on which identifications were made. He divides the names on the biblical Table of the Nations into three groups: (1) Names which refer to peoples or places which were destroyed long ago by natural disasters or wars and which, consequently, no longer have any equivalent in Josephus' world (*Ant* 1.137,139). (2) Names which have been heavily corrupted or changed. Josephus blames the Greeks for altering or replacing ancient names: *Ant* 1.125, "Theires [= Tiras] called those whom he ruled Theirians, but the Greeks changed the name to Thracians"; *Ant* 1.138, "Amathus founded Amathus which the inhabitants to this day call Amathe, though the Macedonians renamed it Epiphaneia after one of Alexander's successors." (3) Names which have been preserved essentially unchanged, so that identification is not problematic (*Ant* 1.131, 132). Identification of a name on the Table of Nations basically depends on whether the modern equivalent resembles in some recognizable way the ancient name. Such similarity may be either direct or indirect. In the former case the modern name directly reflects the ancient: e.g. *Ant* 1.124, biblical *Madaioi* [Madai] = modern *Medoi*. In the latter case the ancient name survives, not in the modern name itself, but in something connected with it. Josephus speaks of this link between the original name and the modern equivalent as a "sign" (*sēmeion*): e.g. *Ant* 1.125, "The Meschenians, founded by Meschos [= Meschech], are today called Cappadocians, but a clear trace (*sēmeion*) of their ancient designation survives; for they still have a city of the name of Mazaca, indicating to the expert that such was formerly the name of the whole race." Josephus' principles of toponymy are standard for the Greek historians and antiquarians. They also explain many of the identifications of biblical peoples and places found in rabbinic and in other early Jewish texts.

**6. Other Catalogues of Nations.** Pseudo-Philo, *Liber Antiquitatum Biblicarum* 4:1–10 (1st century C.E.) gives a version of the biblical Table of Nations notable for its profusion of exotic names. It lists numerous descendants of the sons of Noah not mentioned in the Bible. Most of the names are unintelligible. If they ever had any real geographical reference, it must be assumed that they have become hopelessly garbled in the transmission of the text from Hebrew, through Greek, into its present Latin form.

Acts 2:9–11 catalogues the nations residing in Jerusalem when the Spirit was poured out at Pentecost. It is puzzling how this short list of nations can be taken as representing "every nation under heaven" (Acts 2:5). One solution proposes that an astrological schema correlating the various nations of the world with the signs of the zodiac (cf. the 4th century C.E. *Rudiments of Paulus Alexandrinus*) lies behind the list. The list is comprehensive because it gives one nation for each of the twelve signs of the zodiac (Weinstock 1948; Metzger 1980). However, if the outpouring of the Spirit at Pentecost is seen in Acts as a reversal of God's confusion of tongues after the Flood (Gen 11:7), then the catalogue of nations is most obviously related to Genesis

10. The brief list in Acts is only an allusion to the longer Table in Genesis. Acts' geographical horizon is fairly limited: it stretches from Persia in the E to Italy in the W, from the Black Sea in the N to Egypt in the S.

Later Jewish literature contains various interpretations of the Table of Nations. *Genesis Rabba* (redacted 4th century C.E.) is most concrete and geographical in its commentary on the N nations, the sons of Japheth (*Gen. Rab.* 37:1–8). The Jerusalem Talmud (redacted ca. 400 C.E.), commenting on *m. Meg.* 1.8, "Scripture may be written in any language," discusses the languages of the world in terms of a commentary on the Table of Nations (*j. Meg.* 71b). The Babylonian Talmud (redacted ca. 500 C.E.) presents an exposition of the Table of Nations in order to answer the question, "From where do we know that the Persians are derived from Japheth?" Three recensions of the Palestinian Targum to the Pentateuch, Codex Neofiti 1, Fragmentary Targum, and Pseudo-Jonathan (redacted between 4th and 8th centuries C.E.) offer numerous identifications of the names on the Table of Nations. Targum 1 Chronicles 1 contains also many equivalents, drawn mainly from the Palestinian Targum to the Pentateuch (Alexander 1974: 72ff.). Saadya's Arabic version of the Pentateuch (10th century C.E.) reproduces many of the Targumic equivalents, but introduces some of its own which involve an adjustment of the Table to his historico-geographical horizon. *Sefer Josippon* (10th century C.E.) opens with a very detailed exposition of the sons of Japheth on the Table of Nations as a preface to its account of the antiquities of Italy and the rise of Rome (the Romans are said to be descended from the Kittim mentioned in Gen 10:4). It is quite common in medieval chronicles to begin with a *Diamerismos* (Flusser 1980: 1, 3; cf. 2, 98ff.). Josippon displays a detailed knowledge of early medieval Europe: it refers to the Franks, Bretons, Hungarians, Saxons, Russians, Lombards, Danes and Slavs. Its horizon is consonant with a geographical standpoint for its author in Italy. Rabbinic literature often refers to the 70 (or sometimes 72) nations/languages of the world, without going into detail as to who they are. This figure is derived from counting the names on the Table of Nations (Ginzberg 1968: 194 n. 72).

**7. 1 Enoch.** *1 Enoch*, the bulk of which can be dated no later than the end of the 1st century C.E., is a thesaurus of early Jewish lore on astronomy, meteorology, botany and geography. Two passages are important for its image of the world: *1 Enoch* 76–77 and *1 Enoch* 17–36. The Ethiopic manuscripts are in considerable confusion, and even with the help of the Aramaic fragments from Qumran, it is extremely difficult to reduce the text to order, or project its cosmographical ideas in the form of a map. Grelot (1958) and Milik (1976: 15–19, 34–41), however, have derived maps from the data of the text which, despite being highly speculative in parts, appear basically to be valid. *Enoch's* geography is often referred to as "mythological" (Grelot 1958), or even as "mystical" (Neugebauer 1985: 407), because it is full of fantasy, but such descriptions should not disguise the fact that *1 Enoch* has a model of the world which is meant to organize phenomena and explain how they work. Parts of that model are clearly visualized and must have constituted for their author(s), a *mental*, if not a *drawn* map.

a. *1 Enoch* 76–77. *1 En.* 76:1–14 describes a wind-rose, consisting of twelve winds (four bringing prosperity and eight disaster) that blow from twelve points of the compass. The rose is orientated with E at the top: note how N is said to be on the left and S on the right (76:2). The winds are imagined as blowing into the world through twelve gates spaced at regular intervals round the world's rim. Chapter 76 apportions three of these gates to each of the four quarters of the world; chap. 77 opens with an explanation of the names of these four quarters, which it enumerates in a clockwise direction—E, S, W, N (77:1–3a). Two of its explanations convey cosmographical information. “North” (*šippūnā*) is so called because “in it all the heavenly bodies hide [*sāpēnūn*], gather, go round and proceed to the E of the heavens.” The idea is that the heavenly bodies after setting in the W go round the N rim of the world (presumably behind the N mountains) to rise again in the E. “South” (*dārōmā*) is so called “because the Great One dwells (*dā'ēr rabbā*) there.” If the allusion here is to Sinai, as many suppose, then it suggests that *1 En.* 77 locates the Mountain of God in the S quarter of the world, whereas *1 En.* 17–36 appears to locate in the NW. *1 En.* 77 next divides the earth into three parts: the 1st part is for human habitation, the 2d is for seas and rivers, and the 3d is for deserts and for the Paradise of righteousness (77:3b). Milik (1976: 15) is probably correct in seeing these three parts as concentric circles: the 1st, the *oikoumenē*, is in the center; the 2d is the encircling Ocean; the 3d is the wasteland beyond the Ocean, in which Paradise is located. Milik's restoration of the Aramaic text so that it refers to seven regions in this transoceanic zone (one of them Paradise), though bold, may well be correct (Milik 1976: 15). The remainder of *1 En.* 77 (vv 4–8) gives a highly schematic description of the *oikoumenē*. It mentions the Great Sea (= the Mediterranean) and the Red Sea (= the Indian Ocean, the Persian Gulf and the present-day Red Sea). These were probably envisaged as great bays protruding from the surrounding Ocean into the circular *oikoumenē*. *1 En.* 77 refers, without any toponymical detail, to the seven highest mountains, the seven greatest rivers, and the seven largest islands of the world. The mountains are not located, though their tops are said to be covered with snow (77:4). They are probably to be found among the ten mountains listed on the *Jubilees* map. One of them may be Hermon, the “Mountain of Snow” (Targum Pseudo-Jonathan to Num 34:11; *Sifre Num* §131). Another may be Sinai. Three of the rivers can be located with reasonable certainty. The two flowing from the N into the Red Sea must be the Tigris and Euphrates. The one flowing from the W into the Great Sea is presumably the Nile. The westerly alignment of the Nile is found in some Greek geographers. “The remaining four rivers,” says *1 En.* 77:7, “come from the N side towards the sea, two to the Red Sea, and two empty into the Great Sea.” This second mention of the Red Sea is rather puzzling: why not simply say at 77:6, “four of them come from the N and shed their waters into the Red Sea?” *1 En.* 77:7 is best taken as a description of four rivers in the N half of the world, counterbalancing the three in the S half (77:5–6). If this is so, then “Red Sea” at 77:7 has possibly displaced the name of a N sea, e.g. the Black Sea (= Sea of Me'at on the *Jubilees* map). The two rivers flowing into the Black Sea might be the Don (= the Tina of

*Jubilees*) and the Danube. The two flowing from the N into the Great Sea could be any of the major rivers debouching into the Mediterranean on its N shores. As for the seven islands, five are said to be in the Great Sea and two “on land” (77:8). The former statement makes obvious sense: the *Jubilees* map probably had five major islands in the Mediterranean. The latter statement is problematic. The text may originally have read “two in the Red Sea.” The reference might be to Bahrain, the Dilmun of the Babylonians.

b. *1 Enoch* 17–36. Despite some differences, *1 Enoch* 17–36 appears to presuppose a similar image of the world to that in *1 Enoch* 76–77: the habitable earth is a circular landmass surrounded by Ocean, beyond which lies a region of outer darkness and chaos. The earth is described in terms of a series of journeys which Enoch makes in the company of angelic guides. First he travels to the W (17–25), then back to the center of the world (Jerusalem) (26–27), then eastwards to the end of the world (28–32). Finally, he goes around the extremities of the world in an anticlockwise direction, starting in the E and ending in the S (33–36). Because these journeys are so much concerned with the outer rim of the world (they include a visit to the underworld), the descriptions tend to involve fantastic features which cannot easily be related to real geographical space. The W is covered in greatest detail, partly because it is described twice over (once in 17–19, and again in 21–25). Some have supposed that this double description implies two separate journeys. It is more likely, however, that parallel accounts of the same journey have been combined. Notable features located in the W are: (a) the Mountain of God, with its summit shaped like a throne. This is “the throne on which the great Holy One sits . . . when he descends to the earth in blessing” (25:3; cf. 18:8). (b) The River of Fire flowing into Ocean (17:5). The reference here could be to the Greek Pyriphlegethon, or to the River of Fire in Dan 7:10, or to both. The heavenly bodies, when they set in the W, replenish their fires from this fiery river (23:4). (c) The storehouses of winds, thunder, lightning and other meteorological phenomena, and the chambers of the stars and other heavenly bodies (17:3). (d) Sheol, with its four hollows for different categories of souls. The description of the “middle of the earth” (26–27), as Milik has shown, fits well the topography of the Jerusalem area (Milik 1976: 36). He has also argued that the journey to the E through the spice-lands (28–31) reflects real topographical knowledge (Milik 1958). The most notable feature in the E of the world is Paradise. *1 En.* 32:2–3 appears to locate the Paradise of righteousness in the region of outer darkness beyond the encircling Ocean, on the NE edge of the world.

Some have detected Greek influence on *1 Enoch*'s image of the world (notably in the description of the W in *1 Enoch* 17–36). The major influence, however, appears to have been Babylonian. Grelot (1958: 64–66) and Milik (1976: 17) compare the famous Babylonian *mappa mundi* in the British Museum (the copy of which dates from around 600 B.C.E.). The Greek influence on the *Jubilees* map is unmistakable, and in general (though their accounts of the *oikoumenē* are compatible) the “spirit” of the *Jubilees* map is very different from that in *1 Enoch*. It is possible that these two texts represent two broad “schools”

of early Jewish geography—the one oriental, looking for inspiration to the old centers of learning in the E; the other Hellenistic, receptive of the new ideas coming from the W.

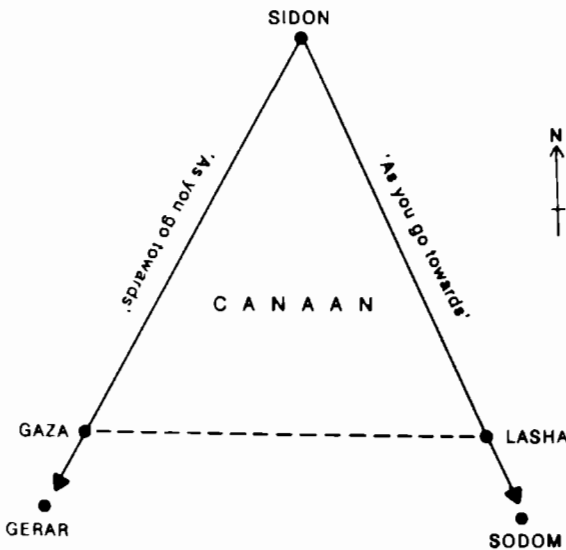

**D. "Maps" of the Holy Land**

**1. The Short Biblical Boundary Texts.** The short boundary texts in the Bible define the Land by using a small number of salient border points. According to the most basic formula the Land extends "from X to Y." The simplest and best known example of this formula is 2 Sam 24:2, "from Dan to Beer-sheba." Note also Gen 15:18, "from the river of Egypt to the great river, the river Euphrates;" Num 13:21, "from the desert of Zin to Rehob, near Lebo-Hamath." These two-point definitions all appear to be on a N-S axis. Certain four-point definitions add a second axis for greater precision: e.g., Exod 23:31, "from the Red Sea (*yam sūp*) to the Sea of the Philistines, and from the desert [in the south] to the Euphrates;" Deut 11:24, "from the desert [in the S] to [emending to *wē'ad*] the Lebanon, from the river, the river Euphrates, to the Hinder Sea [= the Mediterranean]." One would expect the second axis to be roughly E-W, but this does not appear to be the case, unless geographical reality has been very severely distorted. Genesis 10:19 offers a curious three-point definition of the Land: "The border of the Canaanite was from Sidon as you go towards Gerar as far as Gaza, (and) as you go toward Sodom [omit: and Gomorrah and Admah and Zeboiim] as far as Lasha." To make sense of this it must be assumed that Gerar lay *beyond* Gaza and Sodom *beyond* Lasha as one moves S from Sidon. The Sidon-Gerar line is marked off at Gaza, and the Sidon-Sodom line at Lasha. The Land is defined by the Sidon-Gaza-Lasha triangle. See Fig. GEO.07. Ezekiel 47:15–20

contains a further elaboration of the "from X to Y" formula. It envisages the Land basically as a rectangle with four sides (N, E, S, W). The rectangle is defined by four corner points: NE corner = Hazar-enon; SE corner = Tamar; SW corner = the mouth of the Brook of Egypt (= Wadi el-Arish), where it enters the Great Sea; NW corner = a point on the coast of the Great Sea opposite Lebo-Hamath. The picture is complicated a little, and greater precision attained, by introducing a number of intermediate border points and geographical features, between the primary corner points.

**2. The Biblical Borders of the Land of Canaan.** Numbers 34:3–12, which purports to be a definition of the land of Canaan given by God to Moses on the eve of the Conquest, offers the most detailed biblical delineation of the Land. It enumerates a series of border points, starting at the SE extremity of the Dead Sea and going round in a clockwise direction (S-W-N-E) back to the starting point. The S boundary of the Land corresponds with the S boundary of the allotment of the tribe of Judah as defined in Josh 15:1–4 (cf. Ezek 47:15–20; 48:1,28). Comparison of these texts reveals that while the border points are constant, the connecting verbs and phrases differ. This suggests that the linking elements are secondary, and that the source of this description of the boundaries of Canaan, which may have been a late 13th century B.C.E. document in Egyptian or Akkadian defining the Egyptian district of Canaan (Aharoni 1967: 68f.), contained simply a list of border points connected by "and." It is unclear whether the different connecting verbs used—the border "shall turn" (*wēnāsab*), "go out" (*wēyāšā'*), "cross over" (*wē'ābar*), "go up" (*wē'alāh*), "go down" (*wēyārad*)—have any precise geographical significance. The fact that one such verb—*tā'ar* "to turn"—is used in the Hebrew Bible only in the delineations of the tribal allotments in Joshua (e.g. Josh 15:9) suggests it was a technical term in border descriptions. These connecting elements probably go back to the original redactors who incorporated the lists into the biblical narrative. Their general purpose was to indicate clearly that one had to imagine a continuous line drawn through the points mentioned. It was necessary to stress this in the case of the tribal allotments in order to distinguish the border delineations from the town lists for the various tribes. The points enumerated on the town lists are *not* to be imagined as points on a continuous line.

The borders of Canaan as defined in Num 34:3–12, form the framework of two other geographical texts in the Hebrew Bible: (1) the definitions of the tribal allotments in Josh 15–19; and (2) the description of the land that remained to be conquered in Josh 13:1–7. Both these documents seem to presuppose Num 34:3–12: the areas they define fit quite snugly into the area defined there. The description of the land that remains is constructed on the basic formula: "all the land/districts of X, from *p* to *q*." Both documents are best seen as coming from the period of the Judges. They represent, not the territory actually occupied by the Israelites then but the territory to which they laid claim, via "the land of Canaan in its full extent" (Num 34:2), as it had been defined earlier under Egyptian administration. The originals of these texts were probably documents preserved at Shiloh, the covenant center of the tribes. (For a discussion of the historical problems associ-

GEO.07. Three-point definition of the Land of Israel in Gen 10:19.

ated with tribal allotments and related texts see Alt 1953; Noth 1935; and Kallai 1986.)

**3. *Genesis Apocryphon*.** *Genesis Apocryphon* (early 1st century B.C.E.) gives two accounts of the borders of the land of Israel. The first is based on God's command to Abram in Gen 13:14f. to view the promised land: "The next day I [Abram] climbed to the top of Ramath Hašor, and I viewed the land from this height, from the River of Egypt to Lebanon and Senir, and from the Great Sea to Hauran, and all the land of Gebal as far as Qadesh, and all the great desert which is E of Hauran and Senir as far as the Euphrates" (1QapGen 21:10–12). This is clearly based on the biblical Nile-to-Euphrates type of short boundary description, but the author has blocked in skillfully some of the main geographical features between the N and S extremities of the land. *Genesis Apocryphon's* second account of the borders is based on God's command to Abram in Gen 13:17, "Arise, walk through the Land in the length of it and in the breadth of it, for to you will I give it." In 1QapGen 21:15–19 Abram walks round the outer edges of his patrimony in a symbolic act of claiming it as his own. He starts out from the River Giḥon (= the Nile), moves northward along the shore of the Mediterranean till he comes to the Mount of the Bull (*tūr tōrā*) = the Taurus Mountains which some Greek geographers envisaged as a spine of mountains running W-E across N Syria. He turns eastward along the Taurus range until he comes to the Euphrates. He then follows the course of the Euphrates in a southerly direction down to the "Red Sea" (*yammā* <sup>2</sup> *šim-mōqā*), the Erythrean Sea of the Greeks, i.e., the Persian Gulf and the Indian Ocean. He turns westward and proceeds until he reaches the tongue of the "Reed Sea" (*yam sūp*) "which goes out from the Red Sea" = the present-day Red Sea. He follows this till he comes back to his starting point at the Nile. *Genesis Apocryphon's* image of the Land is very coherent and easily related to geographical reality. Its "map" corresponds very closely to the corresponding section of the *Jubilees* "map," and may be based on it. Neither at Gen 13:14f. nor at Gen 13:17 does the underlying biblical text mention any geographical names. 1QapGen has derived its names from both the short and the long boundary descriptions of the land. It is notable that it takes the maximal definition of the borders, as indicated in some of the short boundary texts. This suggests that it took the short texts as primary and accommodated the longer texts to them.

**4. The Targumim.** Three recensions of the Palestinian Targum (= PT)—Codex Neofiti I, Fragmentary Targum, and Pseudo-Jonathan—identify many of the places mentioned in the definition of the borders of the land of Israel in Num 34:3–12. All the texts represent the same tradition and give the same picture, but Ps-J has the fullest account and identifies virtually every name which is not self-evident. The base stratum of the PT to Numbers 34 gives a broad Nile-to-Euphrates definition of the borders of the Land. An addition at Num 34:12, found only in Ps-J, uses four of the points from the complete border list to summarize the Targumic picture: "Reqem Ge'a [= Petra] in the south; Taurus Amanus in the north; the Great Sea in the west; the Salt Sea in the east." The PT definition agrees well with 1QapGen's borders and probably reflects pre-70 tradition. Like 1QapGen the PT has harmonized the long

and short boundary texts of the Bible, using the latter as the framework for its identifications.

Num 34:13–15 makes it clear that the borders defined in Num 34:3–12 relate to the territory of only nine and a half tribes. Although the two and a half tribes that settled E of the Jordan are mentioned, the Bible at this point does not attempt to define their territory. PT rectifies this omission by constructing a border definition for the two and a half tribes similar to that contained in Num 34:3–12. Codex Neofiti I and Fragmentary Targum insert this definition at Num 34:15. Pseudo-Jonathan inserts most of it at the same point, but scatters part of it confusingly through its definition of the borders of the nine and a half tribes. Thus PT offers a comprehensive account of the territories of all *twelve* tribes, of the whole land of Israel. It derives its border points for the two and a half tribes from Num 32:33–42, Deut 3:1–17, and similar texts which describe the allotments of the two and a half tribes. Certain elements in the Targumic definition of the two and a half tribes appear to be related to the Tannaic Boundary List (see below). It is probable that an attempt was made to rework the very broad Targumic boundaries of the Land to make them conform to the narrower rabbinic definition. This has resulted in some geographical incoherence in the Targumic texts.

The PT at Num 34:6, exploiting the redundant *ūgēbūl* ["and (the) border (thereof)"] in the biblical text, defines the territorial waters of the land of Israel: "For the western border you shall have the Great Sea, Ocean, and the border thereof, that is the waters of creation, with the primaevial waters that are in the midst of it" (Ps-J). The sense appears to be that the Targum carries the territorial waters of the Land all the way westwards to the Ocean (i.e. the Atlantic!). The text goes on to claim the "airspace" (*byr* = Greek *aēr*) above this territory as part of the land of Israel.

**5. Rabbinic Definitions.** Prompted by the need to decide what towns and regions were subject to the "commandments pertaining to the Land," such as tithes and the sabbatical year, rabbinic literature gives a number of definitions of the borders of the land of Israel. Rabbinic thinking on the borders of Israel changed as rabbinic halakhah became more accepted by the Jewish communities of Palestine. The earliest traditions use very simple formulae, which set the borders very wide and follow basically the Nile-to-Euphrates short boundary texts of the Bible. Gradually, however, the formulae become fuller and more precise, and the territory defined as land of Israel more restricted and realistic.

**a. The "Taurus Amanus" Formula.** This, the earliest border definition, states that "all that runs from Taurus Amanus and inwards is the Land of Israel; from Taurus Amanus and outwards is outside the Land" (*t. Ter.* 2:12; *t. Hall.* 2:11; *y. Hall.* 60a; *y. Šeb.* 32d). "Taurus Amanus" (with which the PT identifies "Mt. Hor" in Num 34:7) refers to the range of mountains just N of Antioch on the Orontes, so this formula includes the Syria within the Land.

**b. The "Three Regions Formula."** "There are three regions with regard to the Seventh Year Produce: All that they occupied who came from Babylon, from the Land of Israel as far as Kezib, Seventh Year Produce may not be eaten nor

may the soil be cultivated; all that they occupied who came up from Egypt, *from Kezib as far as the River and Amanah*, Seventh Year Produce may be eaten, but the soil may not be cultivated; *from the River and from Amanah outwards* [reading *lahūs* for *lipēnīm*], Seventh Year Produce may be eaten and the soil cultivated" (*m. Šeb.* 6:1). The basic formula is indicated by italics. A glossator has supposed, wrongly, that Kezib marks the N limit of the land occupied by those who returned from Babylon, and the Amanus-Euphrates line the N limit of the land occupied by those who came up from Egypt, at the time of the Conquest (perhaps he is thinking in the latter case of the borders of David's kingdom). Contrast *m. Hall.* 4.8 where this gloss is absent. With this formula, Syria does not qualify as the land of Israel in the full sense of the term. Its status is weakening, but it is still not wholly outside the Land.

**c. Judah ben Ilai's Boundary Formula.** "Reqem and the country east of Reqem count as the east; Ashkelon and the country south of Ashkelon count as the south; Acco and the country north of Acco count as the north" (*m. Giṭt.* 1:2). The western border is not stated here but emerges at *j. Hall.* 60a (cf. *t. Hall.* 2.11; *t. Ter.* 2:12; *j. Šeb.* 36d; *b. Giṭt.* 8a): "As for the islands that are in the sea, you are to imagine a line drawn from Taurus Amanus [emend to "Kaphluria"; see below] to Naḥal Mišraim [here = Wadi el-Arish]. From the line inward is the Land of Israel; from the line and outward is outside the Land." R. Judah says: All that is opposite the Land of Israel belongs to the Land of Israel, as it is written, "And for the western border, you shall have the Great Sea, and the border thereof: this shall be your western border" (Num 34:6). As for the status of the islands that are on the sides, you are to imagine a line drawn from Kaphluria to Ocean, and from Naḥal Mišraim to Ocean. From the line and inwards is the Land of Israel; from the line and outward is outside the Land. The definition, though still schematic, is more precise than the other formulae. The Land is now defined on all four sides, and Syria is quite definitely excluded. See Fig. GEO.08. The definition of territorial waters on the W is noteworthy.

GEO.08. Judah ben Ilai's definition of the borders of Israel.

Rabbi Judah's ideas here correspond to those found in the PT to Num 34:6.

**d. The Tannaitic Boundary List.** This, the most complex and complete definition of the Boundaries of the land in rabbinic literature, is extant in five main recensions: (1) *Sifre Deut.* §51; (2) *t. Šeb.* 4:11, Codex Vienna; (3) *t. Šeb.* 4:11, Codex Erfurt; (4) *j. Šeb.* 36c; (5) lines 13–18 of the 7th century synagogue inscription from Tel-Rehov near Beth-shean (Sussmann 1973–74). The borders are defined basically in the manner of Numbers 34: a series of border points is given, going around (like Numbers 34) in a clockwise direction, and the border is constructed by joining the points up with lines. The area included is similar to that marked off in Judah ben Ilai's formula, and Syria is definitely outside the Land (see further Klein 1928, Neaman 1978, and Sussmann 1975–76).

**GEOMETRY.** See MATHEMATICS, ALGEBRA, AND GEOMETRY.

**GEORGIAN VERSIONS.** See VERSIONS, ANCIENT (GEORGIAN).

**GER** [Heb *gēr*]. See SOJOURNER.

**GERA** (PERSON) [Heb *gērāʿ*]. Although Gera is a common NW Semitic name (McCarter 2 *Samuel* AB, 373), in the Bible the name is restricted to members of the tribe of Benjamin. Aside from the patronymic Gera which appears in prose accounts (see nos. 5 & 6 below), the identity of the other Geras is bound up in the genealogical tree of Benjamin. In two similar lists of sons (Gen 46:21 = *Jub.* 44:25; Num 26:38–41—LXX 26:42–45), Gera appears only in Gen 46:21, as the fourth of ten sons of Benjamin. However, according to the scheme of the LXX, the ten sons are spread over a three-generational genealogy, which includes: Benjamin → Bela → Gera → Ard. Interestingly, whereas Gera is lacking in Num 26:38–41, this two-generational genealogy of five sons of Benjamin ascribes Bela as father of Ard (and Naaman).

Within the Chronicler's framework of genealogies (1

Chronicles 1–9), the name appears three times in but one of the two multigenerational Benjamin genealogies (1 Chr 7:6–12; 1 Chr 8:1–40). According to MT, Benjamin's firstborn son, Bela, is father of two Geras (1 Chr 8:3, 5), and Ehud is the father of another Gera who is father of Uzza and Ahihud (1 Chr 8:7). The sequence of generations is similar in the LXX of Gen 46:21, and in the MT and the LXX of Num 26:38–41 (—LXX 26:42–45) and 1 Chr 8:1–7; Gera, Ard (or Addar), and Naaman appear in each list. The problem of having two sons of Bela named Gera is solved variously. Based on the repetition of the name, and its absence in the Syriac text, the second occurrence can be regarded as no more than a dittography. Another suggestion is that the MT *wēgērāʿ waʿābīhūd* ("Gera, Abihud") in v 3 should be read *wēgērāʿ waʿābīʿēhūd* "and Gera, that is, the father of Ehud" (Rudolf *Chronikbücher* HAT, 76; Williamson 1, 2 *Chronicles* NCBC, 83; Baker 1980: 133). This would distinguish the first Gera from the second, and following Rudolf's reconstruction of vv 3–7 (*Chronikbücher* HAT, 76), the second Gera would be a son of Ehud. The third Gera, along with Naaman and Ahijah in v 7, would then be a repeat occurrence of the second Gera (with Naaman and Ahoah, vv 4–5). This identification assumes that MT *wēgērāʿ hūʿ heglām* means "and Gera, he is the one who carried them into exile" (Williamson 1 & 2 *Chronicles* NCBC, 84) or its negative, based on the emended text *lōʿ heglām* "however, Naaman and Ahijah and Gera did not lead anyone into exile" (Rudolf *Chronikbücher* HAT, 76). Another possibility is to treat the *hūʿ* in v 7 like the "waw explicativum" of v 3, as does the RSV "and Gera, that is, Heglam." Following the logic that the three Geras are distinguished by other associations or identifying features, we find one Gera, the son of Ehud, and another Gera, who was also named Heglam. If Heglam is not taken as a personal name, then it is taken as a verb and this Gera is linked with the relocation of the tribe from Geba to Manahath. Braun (1 *Chronicles* WBC, 125) argues that this movement need not be understood as violent, and that the period of the judges is a likely date for this event (see also Williamson 1 & 2 *Chronicles* NCBC, 83–84). The Chronicler's seemingly convoluted genealogy of Bela may be treated as a straightforward family lineage including Bela → Gera → Ehud → Gera, and it is easy to see that Gen 46:16 and Num 26:38–41 utilize the same names, but in different ways.

1. The fourth of Benjamin's ten sons (Gen 46:21; see also *Jub.* 44:25). See the foregoing discussion for a treatment of the differences between the MT and the LXX genealogies here.

2. The second son of Bela and grandson of Benjamin (1 Chr 8:3). In 1 Chr 7:6–12, where Bela is one of Benjamin's three sons, Gera is not among the five named sons of Bela. If we accept the translation "Gera, that is, the father of Ehud" (1 Chr 8:3, see discussion above), this Gera could perhaps be identified with Gera no. 4 below.

3. The seventh son of Bela and grandson of Benjamin according to the MT of 1 Chr 8:5. As discussed above, textual considerations lead us either to delete this occurrence, or to identify this Gera as the son of Ehud, and therefore the great-grandson of Bela.

4. A son of Ehud the Benjaminite, and father of Uzza and Ahihud (1 Chr 8:7). He may either be identified with

Gera no. 3 above, or simply as another Gera who was also called Heglam (see discussion above).

5. The father of Ehud the judge (Judg 3:15). This is perhaps also asserted in 1 Chr 8:3 (see Gera no. 2 above). Whether "father of Ehud" (Heb *'ābī 'ēhūd*) should be regarded as a clan designation (Boling *Judges* AB, 86) or a direct statement of parentage (McCarter 2 *Samuel* AB, 373) is not clear.

6. A Benjaminite, a member of Saul's family and father of Shimei, the man who pronounced a curse on King David during the revolt of Absalom (2 Sam 16:5; 19:16—MT 19:17; 19:19; 1 Kgs 2:8). Shimei is repeatedly identified as coming from Bahurim, a Benjaminite town, which presumably was the home of Gera. Since Saul's clan is identified as Matrite in 1 Sam 10:27, it is best not to understand "son of Gera" as the designation of Shimei's clan (McCarter 2 *Samuel* AB, 373).

RICHARD W. NYSSE

**GERAH** [Heb *gērā*]. See WEIGHTS AND MEASURES.

**GERAR** (PLACE) [Heb *gērār*]. A town in the W Negeb which is associated with the lives of the Patriarchs. In the Table of Nations, Gerar is used as a geographical landmark for the S border of Canaan (Gen 10:19), probably because of its proximity to, and political association with, Gaza. Gerar figured prominently in the lives of Abraham and Isaac, who settled here at the invitation of its king, Abimelech (Genesis 20, 26). The reference to Philistine Gerar reflects a situation during the early Iron Age when the region known as "Negeb of the Cretans" was under the political patronage of Gaza and later of Philistine Gath. During the period of the monarchy (Hezekiah?), families of Simeon settled here and the land of Gerar became part of their tribal inheritance (1 Chr 4:39–41; assuming "Gedor" of the MT [and RSV] should read "Gerar" according to the LXX). Following the invasion of S Judah by Zerah the Ethiopian, the Egyptian military expedition was defeated by King Asa and pursued "as far as Gerar" resulting in the destruction of all the cities around (2 Chr 14:9–15). Gerar is not mentioned in extrabiblical sources (Gerar in 2 Macc 13:24 appears to be another site; cf. Goldstein, 2 *Macc* AB, 468–69). In the Roman-Byzantine period the name Gerar is preserved in the imperial estate *Saltus Gerariticus* and a monastery was established in the "brook of Gerar." According to Eusebius (*Onomast.* 60.7), it was located 25 roman miles S of Eleutheropolis (Beit Govrin), making the identification of Gerar with Tel Haror (M.R. 112087) most likely.

#### A. Site and Identification

Tel Haror is located on the N bank of Nahal Gerar about 20 km W of Beer-sheba and near the main road from Gaza to Beer-sheba. The ancient mound comprised a lower tel or trapezoidal-shaped compound that covers about 40 acres and descends to the deep gorge of Nahal Gerar. In the NE corner rises the 4 acre, oval-shaped, upper tel which is 130 m above sea level and ca. 10 m above the surface of the lower tel.

Earlier identifications of Haror with cities in the terri-

tory of Simeon, relied upon assumptions that the site was uninhabited prior to the Iron Age. Surface surveys by D. Allon and Y. Aharoni (1954) in the 1950s indicated, however, that Tel Haror has been inhabited during the Bronze and Iron Ages, and this enhanced its identification with the Canaanite-Philistine Gerar, the city of Abimelech. Mazar (1974: 123, 136; 1975: 114) maintained that Gerar was not a city, but the name of a region to be equated with the Roman-Byzantine imperial domain *Saltus Gerariticus*.

#### B. Excavations

Five seasons of excavations (1982–88) at Tel Haror under the direction of E. D. Oren indicated that the site has been occupied since the Chalcolithic period. The major periods of occupation were (all dates B.C.E.):

Iron Age IIB–Persian	8th–4th centuries	Areas D, E, G, K
Iron Age I	12th–11th centuries	Areas B, D, K, L
LB II	15th–14th centuries	Areas K, L
MB II–III	18th–16th centuries	Areas B, K, L

1. **Middle and Late Bronze Ages.** Surveys and excavations demonstrated that Tel Haror was one of the largest MB settlement sites in S Canaan, covering an area of ca. 40 acres. Preliminary investigations ascertained that the city was fortified by an elaborate system of earthen ramparts and defense walls like the fortification systems at neighboring Tell el-Ajjul and Tell el-Fara (S).

Excavations in area K yielded the architectural remains of a well-preserved temple complex. In the NW section of area K a thick mudbrick wall on stone foundations enclosed a spacious open courtyard and various structures and installations. A small chamber was built against the enclosure wall and included a number of low benches, niches, and stands for offerings. Nearby stood a partition wall with niched recesses and a mudbrick block that served as an offering table or altar, as well as some cup marks around it. Two refuse pits (*favisae*) were encountered just outside the enclosure wall. The floor was covered by a thick layer of ashes and charcoal, animal bones, and broken cult vessels. Around the altar were hearths, ash pockets, and large collections of animal bones and pottery vessels, implying that certain ceremonies such as burning of offerings were performed in this part of the temple. The ceramics included many miniature (votive) vessels, decorated stands topped with wide bowls, and vessels applied with bull heads and snakes. See Fig. GER.01. The collection of animal bones is represented largely by sheep and goats (50 percent) and birds (44 percent) though a few dog puppies were also recorded. The study of animal bones supports the conclusion that sacrificial slaughter, mainly of young sheep and goats, took place in the temple area. Excavations under this building exposed some architectural remains of what seems to have been an earlier MB II cult building. The temple site at Tel Haror was abandoned, but not destroyed, in the late MB.

The evidence retrieved thus far indicates that the LB settlement was considerably smaller than that of the MB, totaling no more than a few acres. The LB site was restricted to area L in the NE corner of the lower tel and overlooking the springs of Nahal Gerar. It is represented by at least four phases of occupation that overlie perhaps

GER.01. Handle of jug with serpent from Tel Haror, Gerar—MB. (Courtesy of E. Oren)

the disused MB fortification system. The uppermost remains, including thick walls and a large pebbled courtyard, probably belonged to a patrician house or a small fort that guarded the nearby springs. Tell el-Ajjul provides a close analogy whereby the enormous MB city shrank in the succeeding LB to a single palace or citadel structure. Area L yielded an exceptionally rich assemblage of imported Cypriote ceramics. Also, a refuse pit that was dug into the remains of the MB temple in area K produced among other LB finds, fragments of cult vessels that perhaps originated from a cult place nearby.

**2. Iron Age and Persian Period.** The early Iron Age settlement at Tel Haror, perhaps the "city" of Philistine, is on the NW corner of the lower tel and covers an area of about one acre in area B. The four strata of occupation were built over the remains of the MB settlement. The eroded remains of the uppermost stratum of the late 11th century B.C.E. belong to a fortified settlement enclosed by a 6 m thick mudbrick wall, complete with structural compartments. Earlier occupational strata in the 12th–11th centuries B.C.E. included sections of structures, plastered floors, a stone-lined grain silo, and refuse pits. The ceramic assemblage included masses of early and late types of beautifully decorated Philistine pottery. One of the 11th-century refuse pits produced a large collection of scrap iron tools and vessels, implying some processing of iron implements. The rich early Iron Age settlement at Tel Haror testifies to the dynamic eastward expansion of Philistine culture from the S coast into the Judean Shephelah.

Excavations on the upper tel uncovered impressive evidence of a well organized town with its elaborate fortifications and carefully designed public architecture. The fortification system—rampart, defense wall, and glacis—determined the overall shape of the upper tel.

The defense wall was exposed for some 60 m; it is 4 m thick, plastered on both faces and preserved about 4 m in height. In area D a massive tower projects from the wall

and a complimentary buttress was added inside against it. Nearby, a massive mudbrick platform, over 150 m<sup>2</sup>, was constructed probably to support a corner tower.

A trench was cut in area E to examine the fortification system and establish the sequence of construction. The system was founded on massive earth and *kurkar* ramparts and anchored by a belt of large *kurkar* fieldstones which was topped by thick deposits of ash and brick material. The mudbrick wall was then erected in a foundation trench on top of the rampart and its base was supported by an enormous mass of bricks, brick material, and soil. Against the city wall was built a glacis which was faced with *kurkar* stones affixed in, and coated with, gray clay. The glacis underwent a major repair, perhaps during the last phase of the Iron Age city. Systematic excavations inside the walled area encountered a series of floors, fill material, and buildings that were constructed against the city wall. The earliest floor abutting the wall and on top of the earthen rampart is associated with characteristically 8th-century ceramic types. The major destruction phase which was on one of the upper floors dates to the 7th century B.C.E. above which were remains of the Persian period. It is thus evident that this enormous defense system was constructed in the late Iron Age, ca. 8th century B.C.E. and destroyed in a great conflagration in the 7th century B.C.E.

Excavations in area G uncovered a complex of public buildings—storehouses with symmetrically disposed long halled units that were constructed against the defense wall and erected on mudbrick platforms. At some stage in the late Iron Age the fortification system and buildings inside underwent a major renovation that involved raising the floors some 2 m, blocking the windows and entrances to accommodate a tremendous fill, as well as adding new sections of glacis. The town was destroyed in a major conflagration that was evident in the upper floors of the storehouses. The storehouses yielded large collections of artifacts including a broken clay weight inscribed in ink with the letters *pym*, and a storage jar inscribed with the word *lbgd* ("belonging to Bagad") alongside an Egyptian *ankh* sign and the hieratic number "8" incised four times. The development of Tel Haror was part of an overall military and economic organization of the Assyrian administration in S Philistia and on the border of Egypt. Evidently the well-planned fortified town was established as an administrative center in the late 8th century B.C.E. (Sargon II?) and destroyed in the second half of the 7th century B.C.E., apparently by an Egyptian military expedition of the Saite kings.

Following the destruction of the fortified Iron Age town, the site was occupied during the Persian period in the 5th–4th centuries B.C.E. by one or two phases of settlement which are represented in area G by a large building, paved floors, as well as grain and refuse pits. One of the probe squares in area K yielded a badly preserved burial associated with Egyptian pottery and a Greek fibula. The settlement at Tel Haror falls in line with the densely populated map of the W Negeb in the Persian period.

ELIEZER D. OREN

**GERASENES** [Gk *Gerasēnos*]. The name of people in whose country Jesus encountered two demoniacs (cf. Matt 8:28), and where he exorcised the demons, allowing them to enter a herd of about 2,000 pigs which “rushed down the steep bank into the sea and were drowned” (Luke 8:26; Mark 5:1). The location of this miracle is disputed in the NT manuscripts. The best current Greek text (Nestle-Aland, 26th edition) reads Gadara in the text of Matthew but Gerasa in the texts of Mark and Luke. See also GAD-ARENES. All three texts have variant readings which contain the other two alternatives (Gergesa is added as a third). Part of the reason for the confusion is that all three words are spelled similarly in Greek and there are three locations on the E side of the Jordan that may be identified by these names. The name “Gerasenes” is to be associated with the modern city of Jerash, located in Transjordan, 22 miles N of Amman. Josephus located it on the E borders of Peraea (*JW* 3.3.3) and its present identification is based on several inscriptions found in Jerash which refer to its inhabitants as “formerly the Gerasenes.” The modern Arabic name is similar to the ancient one, which it perpetuates. Coins and inscriptions allude to it as “the city of the Antiochenes on the River Chrysorrhoeas, formerly of the people of Gerasa . . .” The name Antioch, which it wore for a time, was given in honor of either Antiochus III or IV, after Transjordan was taken from Egypt by the Syrian Seleucids.

Archaeological remains indicate that a settlement of some kind stood here in the Stone, Bronze, and Iron Ages. However, the NT city, whose walls enclosed about 200 acres, stood from Hellenistic times on its present location. Situated on the international N-S King’s Highway, it was one of the most important cities E of the Jordan River. The Romans included it among the ten cities of the E frontier which were organized into a DECAPOLIS.

Gerasa, modern Jerash, can hardly be the location of the miracle story because it is 37 miles SE of the Sea of Galilee—too much of a run for the pigs. Gadara, which is to be identified with modern Um Qeis, is also too far away, 5 miles SE of the sea. This leaves Gergesa, modern El Kursi, on the E bank of the sea as the only reasonable possibility, if any credence is to be given to the geographical statements of the gospels. The fact that this is stated to have happened in the “country” or “territory” of these cities cannot mitigate the clear assertion that the pigs ran down a steep cliff into the sea. The only place fitting this description on the entire E side of the sea (“the other side” according to Matthew and Luke) is adjacent to El Kursi.

Eusebius, in the 4th century, located the event here: “Gergesa where the Lord healed the demons. A village is even now situated on the mountain beside the sea of Tiberias into which also the swine were cast headlong.” (*Onomast.* 74.13; author’s translation). Nothing has been

found at Gerasa which would indicate early Christian interest in the city as a holy place. However, at El Kursi, a lavish church was built in the 5th century, which was found in 1970 and has been excavated. It contained beautiful mosaic floors, indicating considerable expenditure and thus a site of some importance. According to Cyril of Scythopolis, St. Saba visited the holy places across the Sea of Galilee in A.D. 491 and prayed in the church at Chorsia (Koursi).

Halfway up the steep hill behind the monastic compound containing the church is a two-part building containing a small mosaic paved chapel with an apse in one part and the base of a tower-like structure in the other. The latter structure encloses a huge boulder, 22 feet high, which it may have been erected to preserve. V. Tzaferis, the excavator, thinks the memorial tower and chapel, as well as the monastery compound below, were constructed in the late 5th or early 6th century to mark the spot as the place of the miracle.

Although Gerasa cannot have been the place of this story, it is interesting in its own right. According to an early tradition, Alexander the Great founded the Hellenistic city for his veterans. An inscription mentions Macedonians among the earliest settlers of the city. It was captured by Alexander Jannaeus around 85 B.C. (*JW* 1.4.8), and subsequently taken by Pompey for the Romans in 63 B.C. About this time it was included in the Decapolis as a city-state. During the first revolt against Rome (A.D. 66–70), this city, along with others in Syria, was sacked by Jews in retaliation for the Roman massacre of Jews at Caesarea Maritima (*JW* 2.18.1) but was later brutally retaken by order of Vespasian (*JW* 4.9.1).

By about A.D. 75, the city was arranged on the Hippodamian plan, with its streets running in checkerboard fashion. Portions of the main N-S street and two main E-W streets are still well preserved. The 1st century A.D. also saw the construction of the unusual, elliptically shaped forum, built in Ionic style and opening to the S. The *Cardo Maximus* (N-S street) ran N out of it. A 3000 seat theater was constructed sometime after the mid-1st century, just inside the S walls of the city. A later inscription (Domitian) was found at the front of the stage. A Temple of Zeus Olympius was built between A.D. 22 and 43 next to the S theater. Outside the S city walls a hippodrome was constructed, either in the 1st or 2d century, which was 800 ft long and would seat 15,000 spectators.

Gerasa reached its zenith in the 2d century, when colonnades were added to the main streets and perhaps the tetrapylons as well. The *Cardo Maximus* was named the Via Antoniniana after the Antonine Emperors of the time. The walls of the city in the imperial period were 10 ft thick and embraced a two-mile circle with a diameter of 3,500 ft. A triumphal arch was erected 1300 ft S of the city, dated by an inscription to A.D. 130, when Hadrian visited the city. The N tetrapylon, built at the intersection of the *Cardo Maximus* and the N *Cardo Decumanus*, was constructed under the Severans. Around A.D. 150, the huge Temple of Artemis was constructed on the W side of the main street, in the heart of the city. The temple was built on a podium, entered from the E, and was surrounded by columns—11 E and W, and 6 N and S. Another smaller theater was built in the N part of the city, between A.D. 162

and 165, and a large bath complex was erected about the same time just E of the N theater. A thousand-seat festival theater, built to celebrate a special Syrian gala in honor of Artemis, was put up less than a half-mile N of the city walls in the Severan period.

Gerasa was graced with many Christian churches in the Byzantine Period, most of them in the 6th century (Church of Procopius, of Saints Peter and Paul, of Saint John the Baptist, of Saint George, of Damian, and the "Synagogue Church," which had remains of a synagogue beneath it). Earlier churches were constructed as well: the 5th century (Church of the Prophets, Apostles, and Martyrs), and the oldest church in Gerasa, the Cathedral, built around A.D. 400. The latter stood just W of the *Cardo Maximus* on the S side of the Artemis Temple. The Church of Bishop Gene-sius was built in A.D. 611.

Gerasa was first discovered in 1806 by U. J. Seetzen and subsequently explored by J. L. Burkhardt in 1812, J. Buckingham in 1816, G. Schumacher and others between 1871 and 1902, and O. Puchstein in 1902. From 1925 till 1956, extensive excavation and restoration was carried out by numerous British and American archaeologists including G. Horsfield, J. W. Crowfoot, C. S. Fisher, N. Glueck, and L. Harding.

### GERGESITE [Gk *Gergesaios*]. See GIRGASHITE.

**GERISA, TEL** (M.R. 132166). A large mound (2.6 hectares) located on a *kurkar* hill at the fork of the Yarkon and Aijalon Rivers. Because of its location, it was very likely the major harbor of the central coastal plain during the Bronze and Iron Ages. The site was first excavated by E. L. Sukenik, who conducted five seasons over a period of 25 years (between 1927-1951). The name of the site was adopted from a nearby Arab village, Jerisheh.

Excavations, directed by Z. Herzog, were renewed in 1981, and so far, four seasons have been conducted (1981-83, 1986).

The site was apparently first occupied in the EB III, but the only remains encountered are scattered sherds in later fills; the excavations since have not yet reached the lower levels.

The MB remains present a more complex stratigraphic picture than was assumed by Sukenik (and published by S. Geva), who attributed them solely to the MB II. Not one, but three fortification systems were identified in the renewed excavations, dating to the MB I-II.

The lowest MB I wall is 1.70 m wide. A thick layer of debris containing bricks from collapsed walls and burnt destruction material is deposited against its inner face, but the floor has not yet been reached. A second floor was laid over this debris.

The second MB I wall (2.20 m wide) was erected on a

higher level, about 0.90 m further inside the city. Two floors abutted its inner face, while on the outer side a formidable glacis covered the slope of the mound. At this spot the glacis was composed of about a dozen sloping brick layers, coated with a covering of crushed *kurkar*.

The third fortification system, unearched just below the surface, was a 3-m-wide brick wall. A series of large rooms and courtyards were constructed against this wall in Middle Bronze Age II.

The high elevation of this sector of the site indicates that it accommodated the socio-political elite of the city, who built and rebuilt their royal palaces throughout the MB. A decline in LB I is apparent from the small size of the rooms of this period and the poor standard of their construction (Stratum AII). No later building remains are preserved at this spot, but there are two phases of pits (for storage or refuse) from LB II and Iron Age I.

Evidence for LB occupation came mainly from Area C at the center of the mound, where a monumental brick-walled structure with stone pavement was erected. Political and administrative functions may have been transferred to this part of the city, perhaps because it was closer to the city gate (not yet uncovered). In the area S of the conjectured gate location, an open space with a white plastered paving is interpreted as the local marketplace. This function is inferred from the relatively large quantities of imported pottery, scarabs, and weights found on and around the pavement. Since there were no later occupational levels in this sector, the LB remains suffered from continuous erosion and plowing.

In Iron Age I, there were two separate settlements, one at the N and one at the S end of the mound. The N one seems to have been of shorter duration, since two phases of occupation in stone and brick houses were followed by two phases of pits, probably used to store grains. These could have been harvested from cultivation of most of the mound by the settlers of the contemporary small village at the S end.

The settlement at the S end was excavated by Sukenik, and much of the data is lost. In the renewed excavations, the remains of two houses were found nearby. Both were partitioned internally by rows of wooden columns, whose stone bases were preserved; both had been destroyed by fire. The rich ceramic assemblage collected from the houses indicates that this was a small village of the Philistines, contemporary with the larger Philistine settlement at neighboring Tel Qasile.

The final Iron Age occupation was a small farmstead of the 10th century B.C.E. on the SW end of the mound, followed by two millennia of desertion.

In addition to trade, probably much of it maritime, the economy of the site was supported by cultivation of the fertile land in the Yarkon valley, animal husbandry, fishing and limited hunting.

The poor remains of Iron Age II do not support the identification of Tel Gerisa with the Levitical city of Gath-rimmon (Josh 21:24; 1 Chr 6:69), as some have suggested (cf. Aharoni, *LBHG*, 434).

ZE'EV HERZOG

**GERIZIM, MOUNT** (PLACE) [Heb *har gērizīm*]. A place known today as Jebel et-Tor (M.R. 176179) located just SW of the ancient city of Shechem. It lies on the S side of the Nablus valley, with Mt. Ebal standing opposite it on the N. Its valley became an important E-W pass and road. The summit's elevation reaches 2,849 ft, 228 ft less than Mt. Ebal. The mountain is made up of three summits. The Samaritan high place (still in use), a Muslim weli, the Christian ruins of the Theotokos church, and other fortification remains from the time of Emperor Justinian lay on the highest peak. It overlooks the nearby N-S highway, which gave it an important strategic position. Early in Mt. Gerizim's history it was the site of Abram's first altar after arriving in Canaan from Mesopotamia (Gen 12:6) and Jacob's well lies NE in the valley (Gen 33:18–20; John 4:5, 6).

Mt. Gerizim holds religious importance even though it is only mentioned directly four times (John 4:20–21 referred to it as "this mountain"). Deut 11:29 and 27:12, as well as Josh 8:33 show the liturgical significance assigned this location. The texts tell of the huge mass of Israelites who assembled on the sides of Mts. Gerizim and Ebal, with the ark of the covenant and the levitical caretakers between them in the valley. There the law was read and the blessings and curses were announced. Moses specified Mt. Gerizim as the spot for the declaration of blessings and Mt. Ebal for the curses.

In Judg 9:7, Jotham broadcasted his unusual parable from an uncertain location on the mountain. Some have proposed that the Tananir ruins is this spot, with its projecting crag recognized as a natural platform. Archaeological excavations in this area found what is thought to be a temple from various phases of the MB Age (Boling, *Judges* AB, 172).

Interestingly, Judg 9:37 has a reference to Mt. Gerizim described as in the Heb *tabbur hā'āreš*, which may be translated as "center of the land." The LXX renders it as *omphalos tēs gēs*, "navel of the earth," giving the phrase more significance. It reveals the "axis mundi" of the territory that surrounds it. The mountain is understood to be a connection between heaven and earth, therefore consecrating the area for those who live and worship near it. This idea is widespread coming from the Mesopotamia conceptualization, also found in Iranian, Greek, Roman, and even Chinese thought.

Josephus (*Ant* 11.8.2, 4) tells of the construction of the Samaritan temple on top the mountain by Sanballat, at the time of the great confrontation between the Jews and Samaritans. This division eventually led to the destruction of the Samaritan temple in 128 B.C. by John Hyrcanus, the Jewish King (*Ant* 13.9.1; *War* 1.2.6).

The writer of 2 Macc (5:23; 6:2) mentions both the Jerusalem temple and Samaritan temple as spots of desecration in a context that reveals no hostility and may in fact give the Samaritan temple some legitimacy (Goldstein, 2 *Maccabees* AB, 261). The temple on Mt. Gerizim was renamed for Zeus, the patron of strangers, by Antiochus IV Epiphanes in the 2d century B.C.; the text of 2 Macc 6:2 recounts that Mt. Gerizim's inhabitants requested the renaming. Although there is some controversy about this text, Josephus (*Ant* 11.5.5 §§257–64) presents the petition

from the Samaritans for exemption from persecution and the renaming of their temple on Mt. Gerizim.

It may have been that to some of the Jews and the Samaritans the renaming was inconsequential. Naming it after Zeus may have been considered justified by using the common usage of the name, that of "God." The deity's residence "Olympios" related to the ethereal location of heaven. Also, the understanding of the appellative "Xenios" as only the "protector of the rights of strangers" gave the community an acceptable arrangement with the Greeks (Goldstein, 2 *Maccabees* AB, 272–74).

Another indication of the Samaritan's casual attitude with respect to the renaming was that the alternate form of Zeus was Gk *Zēna* (Josephus, *Ant* 11.2.2) and Gk *Xenos* (stranger) had a Heb equivalent *gēr*; the combination of *gēr* and *zēna* would reflect the name of the mountain, Gerizim.

Around 70 A.D., 11,600 Samaritans were slaughtered on top of the mountain when the Romans surrounded and finally attacked the mount (*JW* 3.7.32). In the 2d century A.D. the Emperor Hadrian rebuilt the temple of Zeus over the Samaritan ruins. During the 5th century A.D. the Christian emperor Zeno forced out the Samaritans from their sacred mountain and built a church dedicated to Mary as the mother of God. The Samaritans retaliated and destroyed the church, but later the emperor Justinian reconstructed and fortified it (ca. 530). Finally, the Arab invasion of the 7th century A.D. totally demolished the structure.

The archaeological evidence includes the ruins of Justinian's octagonal Theotokos church, excavated by A. M. Schneider in 1928. R. J. Bull of Drew University uncovered the remains of the temple of Zeus, including an inscription "to Zeus Olympius" at the N slope in 1964 and 1966. A massive structure, it measured 14 by 20 m and had a monumental stairway leading up to the temple. Under this temple were found the remains of a Hellenistic structure that is thought to be the temple that the Maccabean revolt destroyed. It was constructed of unhewn stone and mud mortar resting on bedrock.

To this day, the Samaritan community near Nablus supports a synagogue and continues to celebrate the annual feasts on Mt. Gerizim.

JEFFREY K. LOTT

**GERON** [Gk *Gerōn*]. See SENATOR.

**GERSHOM** (PERSON) [Heb *gēršōm*; *geršōn*]. Var. GERSHON. GERSHOMITE. 1. The son of Moses and Zipporah (Exod 2:22). Gershom's birth serves as an etymological reminder of Moses' sojourn in Midian and his favorable relations with Ruel, a priest of Midian, and his daughter, Zipporah (Exod 2:15b–22). Gershom does not appear again by name in the Pentateuch outside of this reference, commonly assigned to the "Yahwist" stratum of the Pentateuchal tradition. The Yahwistic stratum also records Zipporah's ad hoc circumcision of her son, unnamed but presumably Gershom, in order to save Moses' life from the murderous intent of Yahweh (Exod 4:24–26). Gershom seems ultimately to reflect a Levitical family

associated with the priesthood and shrine at Dan (Judg 18:30). Therefore, Gershom represents "the only instance of a demonstrable element of distinctively northern tradition in the Pentateuchal narrative" (Noth *HPT*, 184). 1 Chronicles adapts Gershom and his family within the Levitical genealogical structure for the operation of the Jerusalem Temple (1 Chr 23:15–16), and even retrojects a son of Gershom, Shebuel, into the time of David as the prince (*nagid*) over the Temple treasuries (1 Chr 26:24).

2. A son of Levi and the father of one of the three Levitical families (1 Chr 6:1—Eng 6:16). Chronicles usually replaces "Geršon" from the Levitical lists in the Pentateuch (e.g., Gen 46:11; Exod 6:16) with "Gershom." Thus, Gershom becomes one of the three sons of Levi (1 Chr 6:1—Eng 6:16) and his family receives thirteen cities for their occupation (1 Chr 6:47—Eng 6:62). Gershomites even are appointed to Levitical roles in the operation of the Temple (1 Chr 23:7). Yet the Chronicles also recognizes the Levitical standing of "Geršonites" (e.g., 1 Chr 26:21; 2 Chr 29:12). This confusion has produced several explanations. The LXX of Chronicles translated Gershom as Gedson (Gk *gedson*), the same name that Gershom received in the Greek Pentateuch. Where this equivalence was made difficult by the context in Chronicles, the LXX altered the translation of Gershom further (e.g., Parosom Gk *parosom*, 1 Chr 23:7). Modern scholars have interpreted this inconsistency as evidence for secondary additions to the lists of Chronicles (*Chronicles* HAT, 51–57). The slight variation between Gershom and Geršon, as well as the clear identity of the two names within the narrative of Chronicles, may simply reflect onomastic variation at the time of the composition of Chronicles. See GERSHON.

3. A descendant of Phineas who returned from Babylon with Ezra (Ezra 8:2). Gershom occupies the first position in the list of those who accompanied Ezra in his return to Jerusalem. Significantly, he receives the first position in the list, even before the descendants of Judah's royal line (Ezra 8:2b–3). His priestly lineage via the family of Phineas may explain this fact. Gershom, therefore, was a distant relative of Ezra, who himself traced his priestly heritage through Phineas (Ezra 7:5). The list in which Gershom appears seems to provide an authentic source from the time of Ezra's return (*Ezra Nehemiah* WBC, 108–10), although important dissent from this view has existed (Mowinkel 1964: 118–22).

JOHN W. WRIGHT

**GERSHON** (PERSON) [Heb *geršōn*]. Var. GERSHOM. GERSHONITE. First son of Levi or the Levitic clan of which he is the eponymous ancestor (Gen 46:11; Exod 6:16; Num 3:17). Chronicles sometimes calls him GERSHOM (1 Chr 6:1, 2, 5, 28, 47, 56; 15:7). The origin of these names is somewhat obscure. The Bible suggests that the latter form was parsed as *gēr šām*, "a sojourner there" (Exod 2:22; Judg 17:7), but this is probably popular etymology. The root is ostensibly *grš* plus the suffix *ōn/ōm* (GKC §85t, u). Noth (*IPN*, 38, 223) points out that in Arabic *jaras(un)* means "bell," but this is without example

as a name, and *grš* is not known to have this sense in Hebrew. The root seems rather to be *grš*, "expel," which might form a clan name meaning "the Exile" (perhaps hinted at in Exod 2:22). There is also a noun *gereš* (Deut 33:14), which by context must mean approximately "harvest, produce," the connection to *grš* perhaps being "that which comes forth"; this could form a regional name, perhaps. A final possibility is that Gershom is the original, Gershon having arisen by assimilation with the many *-ōn* suffixed nouns, and that the root is *gšm* plus infixed *resh* (GKC §85w). That root, attested in the name of Geshem/Gashmu the king of Kedar (Neh 2:19; 6:1, 6; see Dumbrell 1971 on an extra-biblical allusion), means "body" or perhaps "big." The name *gršn* may also be attested in Punic (Slouschz 1942: 348).

According to the Zadokite genealogies of P and Chronicles, Gershom is the first of the three Levitic clans Geršon, Kohath and Merari (Gen 46:11; Exod 6:16; Num 3:17; 26:57; 1 Chr 5:27—Eng 6:1; 6:1—Eng 6:16; 23:6). Geršon is divided into the clans Libni/Ladan and Shimei (Exod 6:17; Num 3:18, 21; 1 Chr 6:2—Eng 6:17; 23:7; 1 Chr 6:27–28—Eng 6:42–43) anomalously and perhaps erroneously makes Shimei the son of Jahath the son of Geršom. In the desert, the Geršonites are entrusted with two wagons (Num 7:7) for transporting the textile and skin components of the tabernacle (Num 3:25–26; 4:24–26) under the supervision of the family of Aaron, in particular Ithamar (Num 4:27–28). The number of male Geršonites is 7,500 (Num 3:22), 2,630 between the ages of thirty and fifty (Num 4:40). They camp on the E side of the tabernacle (Num 3:23). The prince of Geršon is Eliasaph the son of Lael (Num 3:24).

The register of Levitical cities, probably dating from the 8th century (Peterson 1977, Boling *Joshua* AB, 492–97), is imperfectly preserved in Joshua 21 and 1 Chronicles 6. The Geršonites are assigned to Golan and Ashtharoth in Transjordanian Manasseh; Kishion/Kedesh, Daberath, Jarmuth/Ramoth and Ein Gannim/Anem in Issachar; Mishal/Mashal, Abdon, Helkath/Hukok and Rehob in Asher; and Kedesh of Galilee; Hammoth Dor/Hammon and Kartan/Kiriathaim in Naphtali (Josh 21:28–32; 1 Chr 6:56–61—Eng 6:71–76).

The Chronicler says that Jehiel the Ladanite of the clan of Geršon (1 Chr 26:21; 29:8) supervised the collection of (precious? dressed?) stones donated in David's reign in preparation for Solomon's building the temple. In this period two hundred Geršonites were led by Joel (1 Chr 15:7; cf. 23:8; 26:22). Chronicles also mentions one Joah, the son of Zimmah and Eden (probably to be read Iddo as in 1 Chr 6:6—Eng 6:21 or Adaiah as in 1 Chr 6:26—Eng 6:41) the son of Joah, Levites who participated in Hezekiah's purification of the temple (2 Chr 29:12).

What are we to make of the similarity of the names Geršon and Gershom? In Chronicles, especially chap. 6, the two are confused. Biblical clan and personal names often appear in more than one lineage, a situation which reflects varying social and political alignments. It might seem, therefore, that some of the clan of Geršon/m claimed Mosaic descent while others did not.

A further, more speculative, analysis is possible, however. To those who assign a major role to an early Mosaic priesthood, terming it Mushite (Cross *CMHE*, 195–215), it

is a problem that the Zadokite genealogies make Mushi the last of the grandsons of Levi, i.e., the least significant, detaching him from Moses, the son of Amram, the son of Kohath. Presumably the displacement of Mushi would be the result of polemic, while the hero Moses graces the genealogy of Aaron. By identifying Mushites and Gershonites, Halpern (1974; 1976) restores this house to its place of pride, since Gershon is the first of the Levitic clans. It remains puzzling, however, that P would demote Mushi but not Gershon and leave Gershom as Moses' son. Perhaps we see a compromise: Gershonites who renounced Mosaic descent were given priority in the Levitic genealogy (but note the preeminence of Kohath in Num 4:34-45; 1 Chr 15:5-7; 2 Chr 29:12), while Gershom and Mushi were allocated less distinguished places in the genealogy.

If Gershom and Gershon were one, there were Gershonite priests at Dan (Judg 18:30), in addition to the cities listed above. Halpern (1974) notes that the tribal territories assigned under Solomon to Gershon were on the border, subject to Aramean depredations or annexation by Phoenicia, since three or four Gershonite cities were in the Cabul (1 Kgs 9:10-13). Such an assignment would, by Halpern's theory, be in effect a banishment of rivals as the houses of Zadok and David consolidated their position. And it would seem the strategy worked: Gershonites had little role in Judah, despite their prominence in Israel at Dan. After the Exile, we do not hear of their participation in the Restoration.

Much uncertainty remains, but the position of Gershon in the Levitic genealogy and Gershom's status as the elder son of Moses surely reflect the crucial role of this clan in early Israel.

WILLIAM H. PROPP

**GERUTH-CHIMHAM** (PLACE) [Heb *gērūt kīmhām*]. Name of a location near Bethlehem (Jer 41:17). It is mentioned as the stopping place of Johanan son of Kareah and his force, when fleeing to Egypt after the assassination of Gedaliah, a Babylonian appointed ruler of Judah. The name probably derives from the person, Chimham (note Heb *Q kīmhām*, *K kēmōhām*), who was honored by David in the place of Barzillai the Gileadite (2 Sam 19:38—Eng 19:37). See CHIMHAM. Since Chimham received a royal pension (1 Kgs 2:7), it has been inferred that he also received a portion of land from David's patrimony in Bethlehem, which became known as Geruth-Chimham. The word "Geruth" is a *hapax legomenon*, and probably means "habitation," "fief," or "lodging place." This rare word caused different understandings in the versions. It is

read as a name in the LXX (A = "land of Beiroth" *gei Beirōth*; B = *Gabeirōth* [Heb letters *gbrt*]). It is read as "threshing floors" [Heb *gornōt*] in the Syriac and "sheep-folds" [*gidrōt*] by Aquila and Josephus (*Ant* 10.9.5).

STEPHEN G. DEMPSTER

**GESHAN** (PERSON) [Heb *gēsān*]. Son of Jahdai, apparently of the family of Caleb (1 Chr 2:47). The name probably means "firm" or "strong." In the LXX it appears as *gēsōm*. How Jahdai relates to Caleb is not clear. Perhaps he is a descendant of Caleb, perhaps even a concubine of Caleb. On the difficulties of the genealogy in 1 Chr 2:42-50a see Braun *1 Chronicles* WBC. The name Geshan occurs nowhere else in biblical literature.

CRAIG A. EVANS

**GESHEM** (PERSON) [Heb *gešem*]. The "Arabian" who opposed Nehemiah's plans for rebuilding the Jerusalem wall (Neh 2:19). The gentilic following his name (*hāʿarabī* "the Arabian") indicated his position of authority under Persian rule, specifically, the region over which he had governance. Sanballat and Tobiah, the governors of Samaria and Ammon, joined him in his opposition, and the three derided Nehemiah's project (2:19) and repeatedly asked to meet with him while conspiring to do him harm (Neh 6:1-4). When these ploys failed, Sanballat threatened to tell the king that Geshem believed rebellious intentions to underlie Nehemiah's reconstruction (Neh 6:6). Obviously, Geshem was a figure of substantial influence if quoting him before the Persian king bore such weight.

Gashmu, a more original form of the Hebraized name Geshem, appears in Neh 6:6 (RSV Geshem, Heb *gašmū*). The meaning may be "big man" or "important man" (cf. the common Arabic verb *jasuma*, "be large").

From Nabataean, Safaitic, Thamudic, and Lihyanite epigraphic evidence, we know this name to be widely attested in the Arabian region of N Arabia. There are two inscriptions which are believed to refer to the Geshem of the Bible. The more important of these, a 5th-century Aramaic inscription on a silver vessel found at Tell el-Maskhuta in Lower Egypt, refers to "Qaynu, the son of Gashmu, the king of Kedar" (Dumbrell 1971), a powerful people who appear preeminent among the Arabian groups of the time. The second, a contemporary Lihyanite inscription found at el-ʿUla (biblical Dedan) also mentions Geshem (Rabinowitz 1956) and another Gashmu appears in a 3d-century Lihyanite king list.

Geshem was likely a Kedarite ruler and a figure of authority for neighboring peoples. Although somewhat overseen by the Persian Empire, his influence extended S and E from Judah and W across the Sinai into Egypt.

NORA A. WILLIAMS

**GESHUR** (PLACE) [Heb *gēšūr*]. GESHURITE. A small, semi-independent kingdom left unconquered W of the half-tribe of Manasseh in the Bashan (Deut 3:14; Josh 12:5; 13:11). According to Mazar (1986) Geshur is identical to the "Land of Ga<su>ru" mentioned in a letter from El-Amarna (EA, 256). It seems that Ga<su>ri was, in the 14th century B.C.E., a league of seven cities bordering the kingdom of Pihilu (Pehal—Hellenistic—Roman Pella) and the kingdom of As-tar-ti (Ashtaroth) in Bashan, found on the S and E of Geshur respectively. In EA 256: 18 two cities at the border between Geshur and Pihilu were taken by Pihilu: Ha-iu-ni that was identified at 'Ayun in the S Golan Heights (Schumacher 1888: 97; Albright 1943: 14; also mentioned as 'Ayin in the description of the border of Canaan [Num 34:11] and as 'Ayyanu in the Execration Texts, E18; also 'Iyyon in the territory of Hippos-Susita [*t. Šeb.* 4.10]); and Ia-bi-li-ma identified with Abel—classical Abila S of the Yarmuk River (Schürer, *HJP*<sup>2</sup> 2, 136; also mentioned in the Execration Texts E43).

It seems likely that the land of Geshur is therefore the geographical-administrative unit forming the S part of the Golan Heights: that is the territory of Hippos in Hellenistic—Roman times, surviving into Ottoman and recent times as Nahia Jaulan Gharbi (Hütteroth and Abdulfatah 1977: 196–97) and as Zawiyah Ghurbiyeh/Fiq (Schumacher 1888: 10).

This area covers some 350 km<sup>2</sup> of the most fertile part of the Golan Heights abounding in rich soils and springs. Its natural and administrative borders are: Nahal Samakh in the N, Nahal Yarmouk in the S, Nahal Raqqad in the E, and the Sea of Galilee in the W.

According to the archaeological surveys conducted in the Golan Heights since 1967 (Epstein and Gutman 1972; Ma'oz 1986), this area is the heartland of the settlement in the Bronze and Iron Ages in the Golan. Some of the seven Geshurite cities mentioned in EA 256 can now be identified with sites in the area: *U-du-mu* with 'Ein Umm el-Adam (Epstein and Gutman 1972: 290, No. 105), the town itself is probably buried under the modern village of Kfar Haruv. *A-du-ri* may be tentatively located at tell Abu Mdwar in Nahal Samakh (Epstein and Gutman 1972: 290, No. 170). *A-ra-ru* at the tell above 'Ein el Hariri (Epstein and Gutman 1972: 290, No. 109). *Me-es-qi* may be identified with Mashrafawi/Shukayyif, S of N Kanaf, an impressive tell surrounded by a Cyclopean Wall occupied from the MB through all periods to modern times (Epstein and Gutman 1972: 290, No. 137). *Ma-ag-da-li* is one of the MB-LB sites close to Mejdelyah (Schumacher 1888: 134) such as Bjuriyye (Epstein and Gutman 1972: No. 135) or el-Qusayyibe (Epstein and Gutman 1972: 290, No. 130). *Heni-na-bi* seems to be Tell Nab above a spring (ein-Nab; Epstein and Gutman 1972: No. 162; Schumacher 1888: 134; Albright 1943: 14) and *Za-ar-qi* may perhaps be the tell above 'ein et-Taruq (Epstein and Gutman 1972: No. 177; where Mazar 1986: 116 n. 14 places Heni-anabi).

The archaeological survey has located some twenty-seven sites occupied in the MB II, 8 in the LB, and 18 in the Iron Age I. These sites seem to represent the occupational history of the Land of Geshur. As in other regions of Canaan, there is a marked decline in the settlement density from the MB towards the LB with a revival of

occupation in the early Iron Age I (the 11th century B.C.E.).

Geshur remained independent within the Israelite conquered territories. Ruled by a dynasty of kings, the names of two of whom are known, Ammihud (Ammihur, *kethib*) and his son Talmi. Both names seem to be of Hurrite origin. David made an alliance with Geshur by marrying Maacah, daughter of Talmi, who became the mother of Absalom (2 Sam 3:3). While the kingdom(?) of Maacah, located presumably N of Geshur, joined forces with Aram Damascus against David (2 Sam 10:6; 1 Chr 19:7), it was to Geshur that Absalom fled after killing Amnon (2 Sam 13:37; 14:23). Later during the reign of Solomon, Geshur became subordinate to the kingdom of Israel.

After the division of the Israelite united kingdom, Geshur joined Aram in raiding the area of Manasseh in the Bashan, called Argob, capturing the cities of Jair from the Israelites (1 Chr 2:22–23; around 886 B.C.E. Mazar 1986: 121). Geshur seems later to have been incorporated into the kingdom of Aram Damascus (mid–9th century B.C.E.) with the reorganization of the latter (cf. 1 Kgs 20:2–4).

The battle between Ahab and Ben-hadad II (ca. 852 B.C.E.) took place on Geshur territory, close to the city called Aphek (1 Kgs 20:26–30). Aphek was recently located on a small tell in Nahal En-Gev (W. Fiq), 1 km W of Fiq. "Tell Aphek" is 2–3 dunams in size and is surrounded by walls. The site produced ceramic evidence of occupation from the EB IV–MB I period through MB II, LB, and Iron Age to the Hellenistic period.

Geshur shared the fate of the capture of Aram Damascus in 734 B.C.E. by Tiglath-pileser III (2 Kgs 16:29). The archaeological surveys show an occupational gap following the Conquest during the later Iron Age and Persian period throughout the Golan Heights.

**GESHUR BNOT YAACOV.** See JISR BANAT YA'AQUB.

**GESHURITES** [Heb *gēšūri*]. 1. The inhabitants of an area SE of Philistia, between Philistia and Sinai (Josh 13:2). When Joshua was aged and the wars of the occupation of

Canaan were subsiding, they were yet unsubdued; Israel had not yet possessed the area they inhabited. When David fled from Saul and resided in Philistia by permission of Achish, he executed forays against the Geshurites and despoiled them thoroughly (1 Sam 27:8–9).

2. The inhabitants of a district, Geshur, bounded by Gilead on the S, Bashan on the E, and Mt. Hermon on the N (Josh 13:11). They were Arameans who, with the Maacathites, remained Israel's neighbors on Israel's NE extremity. The reciprocal relationship between the Israelites and the Geshurites appears to have been ambivalent. When the Israelites occupied Canaan they neither expelled nor subdued the Geshurites, and Josh 13:13 suggests the Geshurites may have not only remained as a neighbor on Israel's border but may have intermingled with the Israelites. Whatever the relationship was between the Israelites and the Geshurites, it included periods of hostility. When Manasseh settled E of the Jordan, the judge, Jair, a Manassite leader, captured prominent Geshurite cities and numerous towns (Deut 3:14; Josh 13:30; Num 32:41). The Geshurites, in turn, recaptured some of those cities (1 Chr 2:22–23), a feat which must have evinced impressive military force and occasioned intense conflict. One of David's wives, Maacah, was a Geshurite, a daughter of Talmai, king of Geshur. This marriage certainly presupposed, included, or entailed some treaty between Talmai and David, and thus between the Geshurites and the Israelites. David's union with Maacah produced Absalom who was thus part Geshurite by blood if not by nationality. The Geshurites became Absalom's host when he fled from Israel after killing his brother Amnon (2 Sam 13:37–39).

GERALD J. PETTER

**GETHER** (PERSON) [Heb *geter*]. According to the Table of Nations (Gen 10:23), Gether is the son of Aram, the forefather of the Arameans or Syrians, who himself was the son of Shem, son of Noah. He and his descendants are thus Semitic. The corresponding genealogy in 1 Chr 1:17 places Gether as a son of Shem and brother of Aram. This is probably due to a simple copying error by an early scribe. His eye slipped from the first to the second of two lines which ended with the same word, "Aram," leading to the loss of the original line "the sons of Aram (are)" which is still found in Genesis. Little else is known about the identity or geographical location of Gether, although the association with Aram would suggest an Aramean city.

DAVID W. BAKER

**GETHSEMANE** (PLACE) [Gk *Gethsēmani*]. Garden located E of the Kidron Valley from Jerusalem (John 18:1), on the slopes of the Mount of Olives (Matt 26:30; Luke 22:39). Jesus often went to Gethsemane in order to rest, pray, and find fellowship with his disciples (Luke 21:37, 22:39; John 18:2). After celebrating the Passover with his disciples for the last time, Jesus went to pray in Gethsem-

ane, where he was later betrayed by Judas Iscariot (Matt 26:36–56; Mark 14:32–52; Luke 22:39–53; John 18:1–12).

The name Gethsemane derives from Hebrew and Aramaic words for "oil press." Presumably Gethsemane consisted of an olive orchard and an oil press to squeeze oil from the olives, both of which were common on the Mount of Olives. Matthew and Mark depict Gethsemane as a parcel of land (*chorion*) on the Mount of Olives (Matt 26:30; Mark 14:32). Luke does not mention Gethsemane, implying that the events of Matthew and Mark occurred at a place (*topos*) on the mount itself (Luke 22:39). Only John describes it as a garden or enclosure (*kepos*), though he does not refer to Gethsemane by name (John 18:1). It may have been a walled garden since John describes Jesus and the disciples as having entered it. From John's account we derive the traditional name of the "garden of Gethsemane." The garden must have been fairly large because Jesus led Peter, James, and John away from the rest of the disciples (Matt 26:36–38; Mark 14:32–34), and later Jesus withdrew further in order to pray alone (Matt 26:39; Mark 14:35).

In Gethsemane, Jesus warned his disciples several times to watch and pray against entering into temptation (Matt 26:41; Mark 14:38; Luke 22:40, 46). Jesus understood his own agonizing time of prayer as a time of temptation from completing the sacrificial will of God (Matt 26:42; Mark 14:36; Luke 22:40, 46). He prayed three times for deliverance (Mark 14:32–42). Some ancient manuscripts of Luke include the physical account of how Jesus' sweat became like great drops of blood falling down upon the ground (Luke 22:44). Jesus won the spiritual battle and faithfully met his betrayer in the garden (John 18:1–11). Some now consider the garden of Gethsemane sacred because it represents the location of Jesus' obedience to God and self-sacrificial love. Reminiscent of Gethsemane, Heb 5:7–8 reflects upon the prayers and supplications Jesus made with loud cries and tears. As a result of his godly fear and obedience, Jesus was made perfect and became the source of eternal salvation to all who obey him.

Today four rival locations claim to be the authentic site of Gethsemane, though none can trace their authenticity prior to the 4th century. Although scholars doubt the accuracy of traditions which try to locate Gethsemane, all admit that the real site cannot be far from one of the traditional ones. In general, Gethsemane was located on the hillside of the Mount of Olives above the road between Jerusalem and Bethany. The traditional Latin (Roman Catholic) site lies nearest the roadway and contains olive trees hundreds of years old, carefully preserved by Franciscans. Despite claims to the contrary, the olive trees do not date back to the time of Jesus. Even if the trees could have lived that long, Josephus records that the Roman Titus cut down all of the trees in the vicinity during the siege of Jerusalem (see *JW* 6.1 §1). Other traditional sites of Gethsemane are maintained by Russian, Armenian, and Greek Orthodox church authorities.

Early Christians conceived of Gethsemane as analogous to the garden of Eden in the divine plan for human redemption. The sinful actions of the first Adam are contrasted with the prayerful obedience of the second

Adam—Jesus Christ. Other Christians claim that Jesus' example in Gethsemane gave rise to the custom of kneeling for prayer (Luke 22:41).

DONALD A. D. THORSEN

**GEUEL** (PERSON) [Heb *gēʾūʿēl*]. One of the twelve individuals sent from Kadesh in the wilderness of Paran to spy out the land of Canaan (Num 13:15). Referred to only in this list of scouts, Geuel was the son of Machi and a representative of the tribe of Gad. He is numbered among the ten who returned from their adventure with a negative report. In translating *gēʾūʿēl* (possibly "majesty of God"), the LXX reads *Goudiēl*. Although attempts have been made to preserve this rendering on the basis of various original forms, *Goudiēl* appears more suitably as a transliteration of the Heb *gaddiʿēl* in Num 13:10.

TERRY L. BRENSINGER

**GEZER** (PLACE) [Heb *gezer*]. A site in the foothills of the Judean range. The king of Gezer is said to have participated with the S coalition of cities against the incursions of the Israelites (Josh 10:33). While Joshua is described as having killed the king of Gezer (Josh 10:33; 12:12), the Israelites were unable to capture the city and it remained in Canaanite hands (Josh 16:10; Judg 1:29). The biblical texts hint that the Philistines later occupied the site (2 Sam 5:25) corroborating the finds of the archaeological excavations. Gezer finally came into the orbit of Israelite rule when the Egyptian pharaoh conquered the city and gave it to Solomon upon Solomon's marriage to his daughter (1 Kgs 9:16). Afterward Solomon fortified the city along with special projects at Jerusalem, Hazor, and Megiddo (1 Kgs 9:15–17).

Ancient Gezer has been located at Tell Jezer (Tell el-Jazari), a 33-acre mound 5 miles SSE of Ramleh (M.R. 142140), since C. Clermont-Ganneau first made the identification in 1870. Gezer is situated about 750 feet above sea level, on the last of the foothills of the Judean range where it slopes down to meet the N Shephelah. It guards one of the most important crossroads in ancient Palestine, where the trunk road leading to Jerusalem and sites in the hills branches off from the *Via Maris* at the approach of the Valley of Aijalon. It is mentioned not only in the Bible, but in several Egyptian and Assyrian texts (see Lance 1967; Ross 1967; and Dever *fc.*).

8. Herodian Period
9. Byzantine to Modern Periods

#### A. History of Excavations

The first excavations at Gezer were conducted between 1902 and 1909 by R. A. S. Macalister for the Palestine Exploration Fund, and the findings were published in three substantial volumes as *The Excavation of Gezer* (1912). Although his notion of stratification was primitive—even judged by the standards of the day—he was able to recognize as many as eight strata (cf. the twenty-six strata of the Hebrew Union College excavations). The pottery was grouped according to seven general periods, some covering as much as eight hundred years: "Pre-Semitic," "First" through "Fourth Semitic," "Hellenistic," and "Roman-Byzantine." The remaining material was published by categories rather than by chronological periods—all the burials together, all the domestic architecture, all the cult objects, all the metal and lithic objects—and scarcely a single item can be related to the general strata, let alone to specific buildings.

What was to have been the beginning of a second series of excavations was sponsored at Gezer by the Palestine Exploration Fund in the summer of 1934 under the direction of A. Rowe (1934). Bedrock was reached in a short time, however, and the excavations were abandoned. G. E. Wright attempted a history of Gezer in 1937, but he was forced by the inadequacy of the published material to confine himself to an article on some of the earliest periods. In 1964, Wright initiated a new ten-year project at Gezer, sponsored by the Hebrew Union College Biblical and Archaeological School (now the Nelson Glueck School of Biblical Archaeology) in Jerusalem and supported chiefly by grants from the Smithsonian Institution in Washington, with some assistance from the Harvard Semitic Museum. The project was directed in 1964–65 by Wright (thereafter, he was advisor), from 1966–1971 by W. G. Dever (again in 1984); and in 1972–74 by J. D. Seger. Gezer was the largest and longest-running American excavation of the time in Israel, and pioneered many of the stratigraphic and interdisciplinary methods in widespread use today, as well as the exclusive use of student volunteers for labor.

#### B. Results of Excavations

The following brief reconstruction uses the latest excavations as a framework, but it incorporates the earlier excavations as well as the literary sources where these can be utilized (for semipopular summaries see Dever 1967; *fc.*; Dever *et al.* 1971).

**1. Chalcolithic Period.** The earliest occupation in stratum XXVI is represented by Macalister's "Cream Ware," which was found in crevices in the bedrock and was evidently deposited by primitive campsites. More of the material was recovered in the latest excavations in field 1, again from hearths and thin deposits on the surface of the bedrock. Both the ceramic and the lithic industries are similar to those of the Ghassul-Beersheba horizon and are to be dated toward the end of the Chalcolithic period, about 3400–3300 B.C.

**2. Early Bronze Age.** The beginning of the EB is fairly well represented, although domestic occupation was not substantial, and there is no evidence that the site was fortified at this time. Most of the EB material published by Macalister (mixed in his "Pre-Semitic" and "First Semitic"

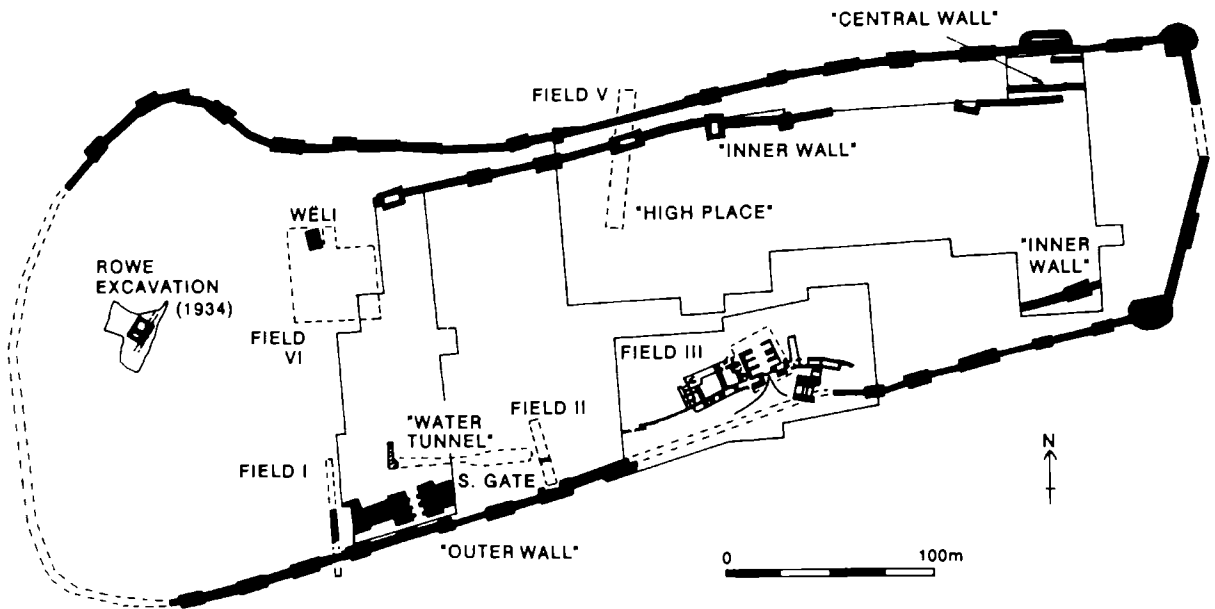

periods) came from the "Troglodyte Dwellings"—caves in bedrock that were initially used for habitation and storage and were later reused as burial places. The recent excavations cleared another of these enlarged and modified caves in the rock, Cave I.3A, from which came a variety of store-jars filled with grain, some stone vessels, and several grindstones and other implements (Seger 1989). We may designate this stratum XXV, belonging to EB IA, about 3300–3100 B.C.

EB II (about 3100–2650 B.C.) is represented by rather meager evidence, principally in fields I and V, with their unimpressive domestic constructions. There are at least two building periods (str. XXIV–XXIII), and if most of the elements of the town plan of Macalister's "First Semitic" belong here, as seems likely, occupation may well have spread over most of the mound. However, the pottery and small objects of this period from the latest excavations were scant and rather poor, as they were from Macalister's excavations. Further evidence for the relative obscurity of Gezer in EB II is the fact that among the large, strategically located sites known from this period, it is the only one which remained unfortified. Whether the site was destroyed or simply deserted, occupation seems to have come to an end by EB IIIA at the latest. The gap in occupation continues throughout EB IV ca. 2400–2000 B.C.

**3. Middle Bronze Age.** It was in the MB that Gezer enjoyed its greatest expansion and prosperity, with the main developments already underway before the end of MB I (str. XXI, about 1900 B.C.). Although the city was not yet fortified, fairly elaborate domestic installations

were found in field VI on the acropolis. Houses and courtyards were well planned and constructed, with fine plaster floors. Rock-hewn cisterns were filled by runoff water carried from catchment areas by plastered and stone-capped drains. A partly subterranean granary was extremely well built, with substantial stone foundations, a mudbrick superstructure, and walls and floors sealed against moisture and rodents by a thick coat of plaster. Cist tombs of this period were found by Macalister, and there were also several intramural infant jar burials found by the recent excavations (Dever et al. 1986).

Gezer reached the zenith of its power in the MB II–III periods (ca. 1800–1500 B.C., str. XXI–XVIII). To this phase belong the first fortifications of the city (str. XIX–XVIII). Macalister traced the "Inner Wall" for nearly 450 yards, or one-third of the way around the mound. Eight rectangular towers were located by Macalister and one by Rowe in 1934, so the wall may have had twenty-five or more such towers. The only known gate is Macalister's "South Gate," a typical three-entryway MB city gate, reexcavated as field IV. On the W, it is flanked by Tower 5017, a citadel fifty-three feet wide and the largest single-phase MB defense work known in Syria–Palestine. See Fig. GEZ.01. The wall itself was constructed of large, roughly-dressed stones, some of them almost cyclopean, with a mudbrick superstructure. It averaged 12–14 feet in width and is still preserved as much as 15 feet in height. It was set into a deep foundation trench reaching almost to bedrock. Pottery from this trench as well as from associated structures dates the Inner Wall in both its phases to the MB III

GEZ.01. Site plan of Gezer. (Redrawn from W. G. Dever, BA [1971]: 96, fig. 2)

period, ca. 1650–1500 B.C. Outside the wall is Glacis 8012, made up of alternating, closely packed fills of debris from the mound and freshly quarried chalk, topped with a thick plaster coating. It sloped up for about 35 feet at a 30 degree angle, leveling off in places to form a horizontal platform before abutting the "Inner Wall" (Dever et al. 1970; 1974).

Another piece of monumental architecture belonging to this period (str. XIX–XVII) is the famous "High Place" discovered by Macalister. See Fig. GEZ.02. It consists of a row of ten monoliths, some over 10-feet high, erected in a N–S line just inside the "Inner Wall" in the north-central area of the mound. To the W of the alignment is a large stone block, perhaps a basin or a socket for a now-missing monolith. The surface over the area is plastered and is surrounded by a low stone curb wall. Macalister dated the main installation to his "Second Semitic" period (MB–LB) and compared it with later biblical "high places," interpreting the steles as typical Canaanite *'asherôth* and construing burial jars in the vicinity (now known to be earlier) as evidence for child sacrifice. While most of Macalister's theories must now be discarded as fanciful, renewed investigation of the "High Place" in 1968 (field V) demonstrated that it was constructed in MB III, with a possible reuse phase in the LB. A cultic interpretation still seems best, perhaps in connection with the covenant renewal ceremony of a tribal or city-state league (cf. Exod 24:1–11; Dever 1973).

Domestic structures of MB II–III show continuity with MB I levels, especially in field VI, where there is an unbroken sequence. The prosperity and artistic development of the period is attested by several rich tombs found by Macalister, especially Tomb 28 with its alabasters, scarabs, and gold jewelry.

The MB city was brought to an end by a destruction that left three feet or more of burned bricks in every field investigated. Along the inner face of the city wall, just W of the "South Gate," there was found a row of hovels and storerooms containing quantities of grain-filled store-jars

and other vessels, crushed under an accumulation of burned beams, ashes, fallen mudbricks, and debris from the collapsed wall. Imported Monochrome and local Bichrome, as well as other transitional MB–LB pottery, suggest a date as late as possible for this destruction. Provisionally, it may be correlated with the first campaign of Thutmose III (ca. 1482 B.C.), when he claims to have destroyed Gezer in his well-known inscription on the walls of the Temple of Amon at Karnak (Dever et al. 1970; 1974).

**4. Late Bronze Age.** Apart from a few hints in Macalister's material, the LB IA (early 15th century B.C.) is scarcely represented, so a partial desertion may have taken place following the Thutmose III destruction. Stratum XVII of LB IB (late 15th century) is also poorly known, except for Cave I.10A of field I, cut into the bedrock outside the "Inner Wall." Most of the several dozen burials deposited in the lower level of this cave during a generation or so show signs of advanced arthritis, probably from stoop labor, which may be an indication of the hardships of life during this period. However, imported Cypriot pottery, Egyptian glass, alabaster, ivory vessels, and a unique terracotta sarcophagus of Mycenaean inspiration, all indicate international trade (Seger 1989).

A renaissance was underway by the beginning of LB IIA, undoubtedly associated with the well-known Amarna period when Palestine was under Egyptian domination. Stratum XVI, which should provide the context for the ten known Amarna letters from Gezer (Lance 1967; Ross 1967) was exposed extensively only in field VI, where unfortunately it had been almost entirely disturbed by later pits. Mere hints were preserved of what must once have been an impressive material culture. "Palace 14120" had walls as much as 6 feet thick that were exceptionally well constructed. Thick plaster surfaces ran across floors and outdoor courtyards and sealed stone-capped drains. Among the small objects were quantities of Egyptian imports, especially fragments of Amarna Age faience bowls, glass beads, faience pendants, scarabs, fragments of gold

GEZ.02. "High Place" at Gezer. (Courtesy of W. Dever)

foil, and a statuette base bearing the name of "Sobeknefru-ankh." Local objects included a clay crucible for copper smelting and a perfectly preserved bronze serpent about 6 inches long (Dever et al. 1986).

To this period, in all likelihood, belongs the construction and first-phase use of the "Outer Wall," which Macalister traced for some 1300 yards, or four-fifths of the way around the perimeter of the mound (attributed to his "Third Semitic" period, or roughly our LB Age). It supplanted the ruined MB "Inner Wall," following a line farther down the slopes and enclosing perhaps one-fourth more area, particularly on the NW. See Fig. GEZ.01. In most places, the wall was set into a deep trench reaching bedrock and destroying the earlier *glacis*. It averaged 12–14 feet in width and is still preserved as much as 15 feet high. A rather crude *glacis* was added to the exterior. The gateway has not been located, but it almost certainly lies below the Solomonic Gate on the S slopes (field III). If our date is correct, this city wall is unique in being the country's only defense system *originally* constructed in the LB and not reused from an earlier period (Dever 1986 and references there to other views).

It has been suggested that Macalister's Water Tunnel (see Fig. GEZ.01) may have been dug in this period, but the shaft was cut off from its context by Macalister and cannot now be dated. It may belong instead, like those at Hazor, Megiddo, and Gibeon, to the Iron Age II.

The LB IIB period may have witnessed something of a decline at Gezer, as elsewhere in the post-Amarna age. No large-scale destruction had taken place at the end of stratum XVI, but some disturbance may be evident in the fact that in both fields I and VI almost no element of the architecture survived to be reused in stratum XV, and the rather unimpressive buildings which succeeded were built on a new orientation.

The end of stratum XV toward the late 13th century B.C. presents a problem. In field II, domestic occupation was interrupted by a destruction that left quantities of smashed pottery and other objects lying about a heavily burned courtyard. It would be tempting to relate this to the destruction claimed by Pharaoh Merneptah on the famous "Israel Stele," about 1210 B.C.; among Macalister's finds was a pectoral bearing the cartouche of Merneptah. Stratum XIV is attested only by a partial hiatus, marked by extensive trenching. These may explain the curious fact that nowhere did the excavations encounter a real destruction accompanying the arrival of the Philistines or "Sea Peoples" in the early 12th century B.C. The site may already have been partially destroyed and deserted. An alternative would be to attribute the disturbance to an Israelite destruction and brief occupation, but the literary tradition in the Bible is explicit that Gezer was not taken in the conquest (Josh 16:10; Judg 1:29).

**5. Iron Age.** Early Iron I, or the Philistine period at Gezer, is especially well attested, with strata XIII–XI all belonging to this horizon. On the acropolis several sub-phases are characteristic of the energetic but stormy cultural history of the era. Although there is continuity in basic architectural elements, and certainly in the typical local painted pottery, no less than three major destructions are evident. In the first, sometime in the early 12th century, a large public granary was destroyed and then re-

built. After the second destruction in the mid-12th century, it was abandoned, and the adjacent threshing floor was converted into an area of fine private houses. Two large courtyard houses on the upper terrace have been excavated. Both were destroyed by fire toward the end of the 12th century, then rebuilt, destroyed again, and finally rebuilt very poorly, before being abandoned in the mid-11th century B.C. Elsewhere, in fields I and II, two or three Philistine phases are also evident, though with less dramatic demarcations. Macalister's Tombs 9 Upper, 58 Upper, and 59 Upper may all be ascribed to this period. The pottery of this horizon, particularly in the 12th century, is a mixture of local traditions of the degenerate LB Age, plus the sudden appearance of the characteristic Philistine Bichrome wares. The distinctive Philistine painted wares are relatively scarce (perhaps less than 5 percent), and they decline in both number and quality toward the end of the period (Dever et al. 1986).

In fields II and VI, two ephemeral "post-Philistine/pre-Solomonic" phases were discerned, strata X–IX (late 11th–mid-10th centuries B.C.). These phases were marked by a distinctive pottery that was no longer painted but was merely treated with an unburnished, thin, red slip, especially on small bowls. The architecture following the Philistine strata was poor. Everywhere they were investigated, these levels came to an end in a violent destruction, which may be correlated with the campaigns of the Egyptian pharaoh who according to 1 Kgs 9:15–17 had "captured Gezer and burnt it with fire" before ceding it to Solomon, probably around 950 B.C. (It has been suggested that this pharaoh was Siamun, of the ill-fated 21st Dyn., but this is uncertain on present evidence; cf. Lance 1967).

The first Israelite level is stratum VIII, to which belongs Macalister's "Maccabean Castle." This structure, only partially excavated, was first recognized by Y. Yadin (1958) as a typical Solomonic four-entryway city gate, almost identical to those previously published from Megiddo and Hazor. The recent excavations in field III have fully confirmed the date and have filled in many details concerning the plan and construction. See Fig. GEZ.01. The inner gate was exceptionally well built, with foundations in the guardrooms going some 6–8 feet below the surface and with fine ashlar masonry at the jambs. Plastered benches skirted the three walls of each of the inner chambers, a feature considered so essential that each time floor levels were raised the benches were also raised and replastered. Roofs over these inner chambers are indicated by a plastered downspout drain at the rear corner of the gate structure. Shortly after its construction about the mid-10th century B.C., the gate was altered by the raising of the street level and the addition of a large drain, over 3-feet wide, running down the middle of the street and under the threshold. An outer two-entryway gate and short stretch of wall connecting with the "Outer Wall" were recleared in 1984 (Dever 1986).

The casemate wall connected with the upper gate has been investigated in field II as well, and it is also Solomonic in date. See Fig. GEZ.01. In all probability, the towers of ashlar masonry, which Macalister demonstrated as being an addition to the "Outer Wall," are of this period. Apparently, Solomon simply repaired and reused the LB fortifications wherever possible, adding his own distinctive type

of city wall and gateway only in the area where we conjecture that the ruined LB gate had been situated, connecting the gate with the casemate wall upslope and the reused "Outer Wall" downslope (Dever 1986). See Fig. GEZ.01. The 1984 season revealed part of a large barracks/administrative complex just to the W of the upper gate, "Palace 10,000," perhaps comparable to "Palace 6000" at Megiddo (Dever 1985, 1986).

The domestic architecture of stratum VIII was unimpressive, indicating perhaps that Gezer under Solomonic control was little more than a token administrative center. In field VI, large ashlar identical to those in the gate were found in secondary use in a citadel wall of about the Assyrian period—virtually all that survives here of the post-Philistine period—so it is possible that there was a Solomonic fortress or palace on the acropolis. No tombs were found in the recent excavations, but Tombs 84–85 Middle, 96, and 138 of Macalister's excavations have good mid-10th century material. The pottery is typical of the period, with the red-slipped wares of the previous period now hand-burnished. Among the small objects, one may note a small limestone incense altar inscribed with a stick figure who resembles the Canaanite storm god Ba'al, with an uplifted arm grasping a bundle of lightning bolts.

A destruction, particularly heavy in the vicinity of the gateway, brought stratum VIII to an end in the late-10th century B.C. This was probably the work of Shishak about 924 B.C., as part of his well-known raid in Palestine (cf. 1 Kgs 14:25).

Macalister's arbitrary selection and publication of the material of the Iron Age II (mixed in his "Fourth Semitic" period) had led most scholars, including Albright, to assume that the site was virtually abandoned in the 9th–7th centuries B.C. However, Macalister's Tombs 28, 31, 84–85 Upper, and 142 certainly belong to Iron Age II, and the "gap" has been closed by strata VII–V of the recent excavations. Nevertheless, it is evident that occupation was rather sparse, and the site seems to have declined in importance following the Shishak destruction.

In stratum VII (9th century B.C.), the Solomonic gate was rebuilt as a three-entryway gate, identical to that of Megiddo IV-A. Field VII produced several fine pillared-courtyard houses of strata VII–VI. The gate survived until stratum VI was destroyed, probably by Tiglath-pileser III in the Assyrian campaigns of 734/33 B.C., which are depicted in a well-known relief found long ago at Nimrud (Calah). "Palace 8,000," above the ruins of "Palace 10,000" W of the upper gate, was also destroyed at this time. A chamber of the adjacent casemate wall was filled with destruction debris, including iron arrowheads (Dever 1985). Domestic levels elsewhere were also brought to an end, these in a conflagration that has left dramatic evidence in field II.

Stratum V (7th century B.C.) is of little importance, except that it provides a context for Macalister's Neo-Assyrian tablets and the several royal-stamped jar handles found. Although little evidence survives, the gate apparently was converted at this time into a two-entryway gate like that of Megiddo III. Shortly after, it was destroyed so badly, probably in the Babylonian invasion of the 6th century, that it was never rebuilt as a chambered gate. In fields II and VIII, stratum V domestic levels were also

found badly destroyed. In the casemate of the city wall in field II, there was found a quantity of smashed pottery, some of the sherds marked by firebrands, and a spill of calcined limestone.

**6. Persian Period.** A gap follows the end of stratum V, which stratum IV of the Persian period (5th–4th centuries) only partially fills. Macalister's "Philistine Tombs," with their rich deposits of silver vessels, belong here. The recent excavations produced very scant material, although typical Persian pottery was found in small quantities in stratum IV. Otherwise, only a few pits and some flimsy walls of the Persian period survive.

**7. Hellenistic Period.** Strata III–II are Hellenistic, spanning the 3d and nearly all of the 2d centuries B.C. but representing for the most part the Maccabean era, as the literary sources lead one to expect (esp. 1–2 Maccabees). From the Ptolemaic period, to which stratum III seems to belong, there is little material from the recent excavations, although Macalister's *Yehûd* and *Yerushalayim* stamp impressions attest to occupation. Somewhat later, the gate in field III was rebuilt, perhaps by the Syrian general Bacchides. For the Hasmonaean period, a fairly extensive exposure in fields II and VII has produced several fine courtyard houses. From the ruins of the last phase came a coin of Demetrius II (ca. 144 B.C.). In fills beneath the floors was a coin of Antiochus VII (ca. 138–129 B.C.). Rhodian jar handles, lead weights, and a mass of iron tools were also found. The gate of field III was rather hastily repaired, the threshold being narrowed nearly a meter, and only parts of the interior structure reused (Macalister's "Maccabean Castle"). It seems certain that the "Outer Wall" was retrenched and reused, Macalister's semicircular bastions being added around the towers at this time. With the destruction of stratum II sometime toward the end of the 2d century B.C., Gezer's long history as an important city in Palestine came to a virtual end.

**8. Herodian Period.** Stratum I belongs to about the Herodian era (late 1st century B.C.–1st century A.D.), as shown by material from both the earlier and the more recent excavations. The site was virtually deserted, and most of the known material comes from Macalister's *kokhim* tombs in the vicinity. The well-known Gezer boundary inscriptions, found in an arc some distance from the mound, are further evidence that in the Herodian period Gezer was no longer an independent city but merely part of a large private estate, thinly occupied and no longer of consequence. The owner or administrator, whose Greek name "Alkios" is given on the inscriptions, may have been Jewish, but that is uncertain. Macalister's "Syrian Bath" probably belongs to this period and may be a *mikveh*.

**9. Byzantine to Modern Periods.** The only later material consists of tombs excavated by Macalister, most of which are Byzantine (4th–6th centuries A.D.), and faint traces of occupation in the vicinity of the mound. Two coins attributed to Chosroes II (about A.D. 614–628) attest to the era of the Persian conquest in 7th century A.D. Gezer was identified by Clermont-Ganneau with *Mont Gisart* of the Crusaders, but this identification is without supporting evidence. A few coins and some vessels of the Mameluke period in reused Byzantine tombs are evidence of an occupation in the 13th century A.D. A small *weli* (Muslim shrine of a holy man) was built on the acropolis in the 16th

century but is now destroyed, as is the modern village of Abu Shusheh on the W slopes, which was founded in the late 18th or early 19th century. Nearby, Kibbutz Gezer perpetuates the name.

WILLIAM G. DEVER

**GHASSUL, TULEILAT EL-** (M.R. 207135). Tuleilat, the diminutive plural form of Arabic "tell," describes a series of small low mounds in the lower Jordan Valley, mounds once covered with a thick growth of a brushwood plant from which a washing (Ghassul) soda was extracted. The name literally means "the small hills of the washing soda plant."

The site is situated at the NE corner of the Dead Sea, approximately 5 km to the E of the river Jordan and between 290 and 300 m below sea level. In modern times the area is hot (summer temperatures often in excess of 50° C [ca. 120° F]) and dry; but with recent irrigation from the East Valley Canal the soil has proven suitable for market garden produce.

The ancient settlement was large, about 20 hectares, and, at the time of its initial settlement, founded on sandbars in the midst of slow moving fresh water. This swampy environment supported a luxuriant natural growth of sedge, alder, reeds, and mosses (Webley 1969).

The importance of Tuleilat (or often Teleilat) Ghassul was first recognized by Pere Mallon of the Pontifical Biblical Institute and excavations were conducted on two occasions; initially from 1929–1938 (Mallon, Koepfel, and Neuville 1934; Koepfel, et al. 1940) and again in 1960 under the direction of Robert North (North 1961). In 1967, a further series of excavations were instituted; however, the program was interrupted by the war of 1967, but it resumed in four more seasons between 1975 and 1978 (Hennessy 1969; 1982).

The stratification of the site has been complicated by the action of successive earthquakes, some which undoubtedly

account for the destruction of the prehistoric settlements; but more recent seismic activity since the Chalcolithic period has continued to split the site, a result which has been accentuated by the soft, sandy base of the ancient settlement.

There are about 5.6 m of accumulated settlement remains, representing almost 1000 years of occupation. Carbon 14 analyses suggest an original Late Neolithic settlement at about 4600 B.C. and a final desertion of the Chalcolithic town ca. 3600 B.C. Both figures are Libby half-life and uncalibrated.

The initial Neolithic occupation consisted of half-sunken rounded houses or pits. Evidence of the settlement was found at the bottom of areas A and E and the dwellings were dug into natural sand. The flaked-stone industry and ceramics of these first settlers are similar to those of Jericho Pottery Neolithic A and B.

Above the Neolithic settlement in area A there is about 5 m of deposit containing eight major building phases, separated from each other by camp floors. Throughout the deposit the architecture is uniform. The buildings appear to be domestic and consist of large rectangular rooms with dimensions up to 15 × 5 m, though the average is somewhat less.

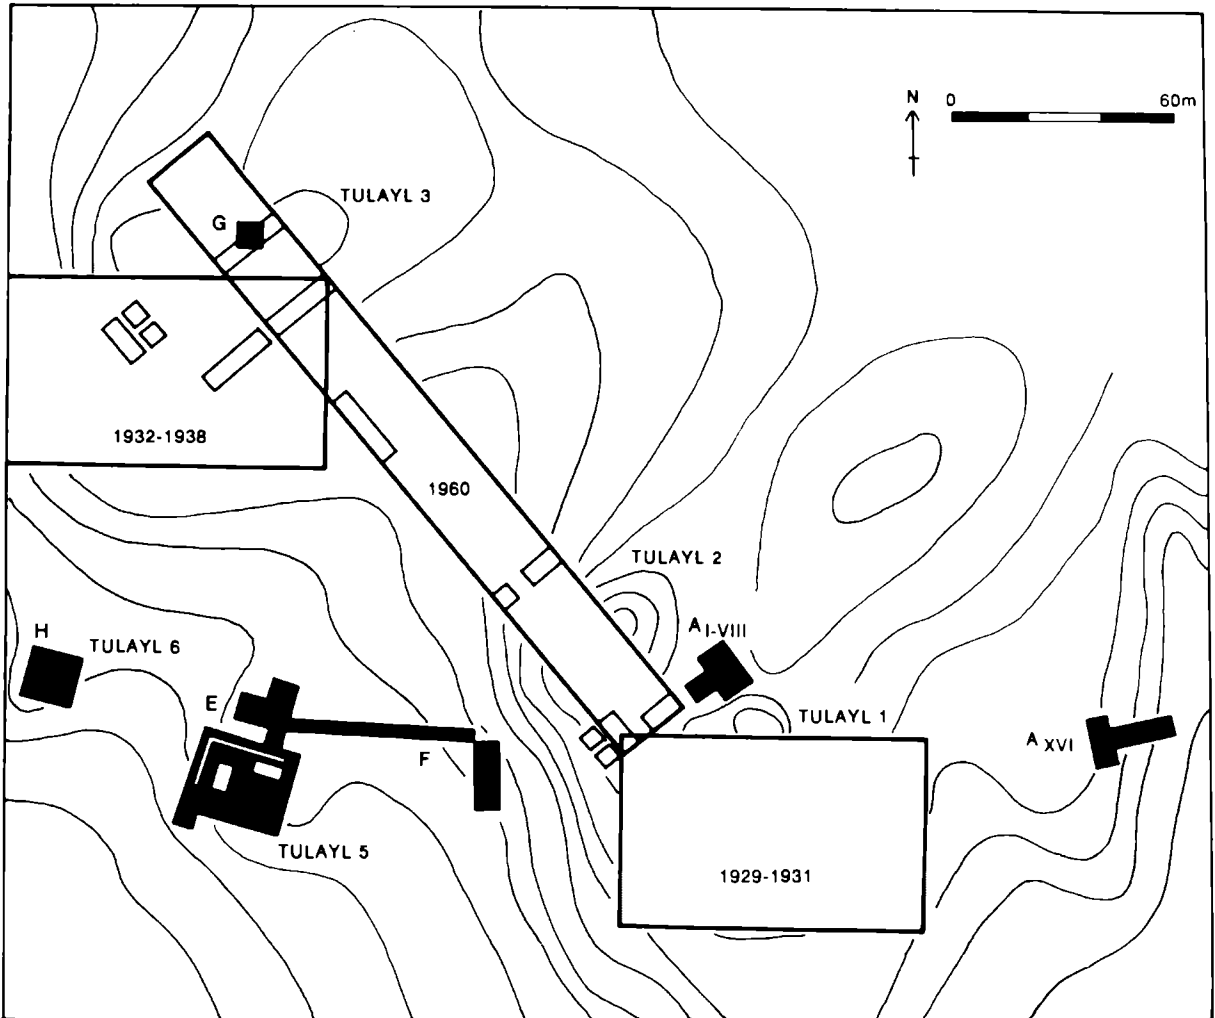

The normal method of construction was a single foundation course of heavy river stones, probably from the nearby Wadi Djarafa, and a superstructure of mudbrick. The bricks were bun-shaped, about 25–30 cm in diameter, sun-dried, and were laid in a mud mortar. Entrance to the building was through a single doorway, usually in one of the long sides. Roofs appear to have been pitched and constructed of reeds and a mud capping over a heavy timber frame. In some of the larger buildings central timber posts appear to have been used to support the roof.

Floors were usually of packed mud or earth, though pebble floors were sometimes used and occasionally finished with a coating of thick lime plaster. The same plaster was used to line inner-wall surfaces and the faces of pits and silos cut into house and courtyard floors.

In many instances the plaster-coated walls were painted with scenes of geometric and naturalistic patterns. The wide variety of colors, red, green, black, white, and yellow, in varying shades, appear to have been mineral based. Walls were recoated and painted; in some instances more than twenty replasterings have been counted. The painted buildings occur in all phases of the rectangular architecture. One of the earliest was lifted and conserved. It shows a human procession of richly garbed figures approaching what appears to be a building—perhaps the cult center of area E. A comparable construction appears in the background of the famous "star fresco" found in 1933 (Mallon, Koepfel, and Neuville 1934: 135–40). Stone-lined hearths and storage pits were found both inside houses and in courtyards.

Two of the rectangular buildings (area E) were enclosed by a mudbrick wall on stone foundations. Although the E and S sides of the enclosure wall had been eroded, the general plan immediately calls to mind the cult area at En Gedi, and the contents of the two buildings at Ghassul supports the suggestion that the area was a cult center.

No adult human skeletons have been found; but well-preserved remains of newly born children are quite com-

GHA.01. Site plan of Tuleilat Ghassul.

mon beneath the floors of houses. They occur in a corner of the room, either inside jars or covered by large pithos sherds, and may be evidence of foundation sacrifices.

Throughout the occupation of Ghassul, the economy appears to have been based on agriculture and pastoralism, though some hunting is evidenced.

In brief, the archaeological significance of an sequence at the site is as follows:

1. The site was a large one, without any real evidence of technological specialization in any area of the settlement. The only isolated region appears to have been the sanctuary area.
2. There is no evidence of any temporal significance to the various mounds—all areas tested show the same general sequence.
3. The site was occupied for about 1000 years, ca. 4600–3600 B.C. There is strong evidence in some areas that

at least one building phase had been eroded from the top of the site.

4. The basic culture assemblage shows changes throughout the 1000 years of occupation, but nothing which could not be explained as simple internal change or development.

The changes which do take place in the 1000 year history of Tuleilat Ghassul are most clearly seen in the ceramic industry. In general terms, the changes were in shape and decoration; the fabric and firing of the pottery remained fairly uniform.

Buff wares tend to be more common in the earlier strata, but even there the majority of the pottery is red to gray ware with gritty inclusions, but well-fired. A notable feature of the developed Ghassulian ceramics is the technological skill of its manufacture. Many sherds show evidence of having been taken to a point of vitrification and held

there. No wasters have been found on the site, and it is presumed that the firing took place outside the settlement area, probably nearer the foothills of the E range where timber for the kilns could have been more readily available.

However, three major periods can be seen in the ceramic phases. In phase 1, the earliest pottery (cf. Hennessy 1982: fig. 2) belonging to the period of the sunken round houses and earliest rectangular architecture, had simple and plain rims, with shallow bowls and jars; the ware was dark-faced and coarse, but with a notable percentage of buff clays. The surfaces occasionally had matte red slips (burnishing was rare) or were grass wiped, textured, incised, or with stabbed decoration. Painted decoration was extremely rare and when it did occur it was limited to a red band painted around the rim of shallow bowls. The bases were usually flat and often splayed, but ring bases did occur; round-weave mat impressions are clear on the bases.

The middle phase 2 (cf. Hennessy 1977: figs. 7–8) was represented by an elaboration of rim shapes and the common appearance of the cornet with a uniform hard-fired red to gray ware (buff wares were less common). The appearance of simple geometric painted ornamentation became more common, but was still rare; chevrons, solid triangles, and loops also occur; mat impressions change from a round weave to a square weave.

In the upper levels (cf. Hennessy 1977: figs. 5–6) the wares were often smear washed and painted; the cornet became more common and lighter and was commonly decorated. A large variety of deep and shallow bowls, jars, and jugs with the common appearance of small multiple lug handles appeared.

Distinctions within the flaked-stone industry are less well marked, apart from a solid Neolithic content in the earliest phases, where there are: (1) blades with broad denticulation—but also fine denticulates; (2) notched blades; (3) serial flaked blades.

These three elements disappear with the appearance of rectangular architecture. Axes, chisels, points, burins, steep and flat scrapers (round or fan) are common in all periods, and chisels tend to become longer and more slender as time advances. Certainly, on our evidence, hollow ground and polished cutting edges are a late feature.

There is no obsidian and all flaked stonework was on local chert and flint. A number of blanks were found and a knapper's workshop in area A demonstrates that the flaked-stone industry was a local one. Arrowheads, with or without tangs, do occur.

As yet, the study of the faunal and floral evidence is incomplete, but from observations in the course of excavation, there appears to be no major change. Varieties of wheat, barley, peas, olives, and flax are common and often found in large storage jars. Remains of pig, goat, sheep, deer, and cattle are present at all levels. The suggestion of a mixed pastoral, agricultural, and hunting economy would suit the evidence at Tuleilat Ghassul well.

A developing metal industry is attested in the upper levels (Mallon, Koepfel, and Neuville 1934: 75–77) and malachite was traded for beads—presumably with the area of the Wadi Feinan to the S of the Dead Sea.

The bone and ground-stone industries remained uniform throughout the site.

The C<sub>14</sub> dates, the Neolithic flaked-stone types, and the earliest pottery would certainly suggest connections with the Pottery Neolithic cultures of Jericho and the upper phases at Ard Tlaili, Middle and Late Neolithic Byblos, and the S Neolithic sites of the Beqa<sup>c</sup>, but nowhere, so far, are the connections sufficiently close to allow one to fit the earliest Ghassul sequence into a certain slot in the Late Neolithic/Early Chalcolithic cultures of the Levant.

Most of the normally accepted criteria for Late Neolithic—burnished wares, bow rims, herringbone incisions, and burnished red-on-cream wares are either missing or rare in the lower levels at Ghassul.

With a few notable exceptions (javelin and projectile heads and tanged arrowheads), the flaked-stone industry is close to those Late Neolithic and Early Chalcolithic sites mentioned above, and right from the beginning, chisels are a dominant feature. They occur by the hundreds and fit well into Copeland/Perrot's suggestion of an increased dependence on wood and woodwork from the beginning of the Middle Neolithic.

At the other end of the scale, the relationship with the Beer-sheba sites are fairly clear; but there are a few points we should note. Cornets, which have an early origin at Ghassul are more common than they are on the W sites. On the other hand, churns which are comparatively common on the W sites are rare at Ghassul. The smeared-washed wares of Ghassul are again comparatively rare outside Ghassul.

It seems that the relationships between the W sites and Ghassul, are confined to those features which are common at Ghassul only in phases A and B, the very final stages of occupation at the site.

JOHN B. HENNESSY

**GHAZZA, KHIRBET.** See 'UZA, HORVAT.

**GHOSH** (PLACE). See ABU GHOSH (M.R. 160134).

**GHOST.** See MAGIC (OT).

**GHRAREH** (M.R. 191956). Ghrareh is an Edomite site of the 7th-6th centuries B.C. It has not thus far been equated with any biblical site.

Ghrareh is located in S Edom at the head of the Wadi Delaghah, one of the few practical routes to the Wadi Arabah and the W from this point on the plateau. It is situated on a projecting spur which slopes steeply to the N, W, and S and is approximately one km from the nearest source of water—the perennial spring at 'Ain Reseis.

Ghrareh was first discovered by the Edom Survey Project in 1984 (Hart and Falkner 1985). It was sounded during the 1985 season (Hart 1987a and 1987b) and in 1986 a full season of excavation was undertaken (Hart 1988). The top of the hill is enclosed by a substantial defensive stone wall, part of which may have been of casemate construction. In the center of the enclosure (area A) is a single courtyard house with a cistern and associated structures attached to the S. The main gate to the fortress was not found but was probably located at the E end of the site which has suffered badly from Nabatean stone-robbing and recent ploughing. It would appear from surface remains that most of the enclosure was open or contained makeshift structures.

The central building (area A) is built of the local limestone using large blocks (up to 1.5 m long) with some snecking. Bedrock, with plaster in places to smooth out irregularities, forms the only floor. In plan the building consists of a central courtyard divided by a line of pillars. Rooms adjoin to the W and S. On the N side there is no room but rather a "verandah" raised on overlaid stones. Towers occupy the corners of the building and project on either side of the front doorway (the E).

Pottery is standard Edomite 7th-6th centuries B.C. with many parallels in the Buseirah and Tawilan corpora.

STEPHEN HART

**GIAH** (PLACE) [Heb *gīah*]. An unknown site close to which Joab and Abishai rallied supportive Benjaminites in their pursuit of Abner (2 Sam 2:24). The text is difficult, if not corrupt. Neither the name Giah nor the hill of Ammah, which it is said to be near, are otherwise attested. LXX reads Gai, a transliteration of *gay*<sup>7</sup> (meaning valley), but that does not help us since, by itself, it is also completely unknown as the name of a particular place. The identity of the location is further complicated by the fact that the men are said to have been moving towards the desert of Gibeon. Since Gibeon is not in a wilderness or desert region, we are probably justified in accepting S. R. Driver's (*NHT*, 244) suggestion that Geba be read in place of Gibeon. Geba stands near the desert region leading down to Jericho. While the exact location of the site is indeterminate, we can say with some assurance that it is in the tribal district of Benjamin.

ELMER H. DYCK

**GIANTS, GIGANTISM.** See SICKNESS AND DISEASE.

**GIBBAR** (PERSON) [Heb *gibbār*]. Name of a family returning to Palestine with Zerubbabel shortly after 538 B.C.E., the end of the Babylonian exile. Ezra 2:20 includes the "sons of Gibbar" in a list of the "men of the people of Israel" (Ezra 2:2b-35), distinguishing them from the priests, Levites, and temple-servants. Since the parallel list of returning exiles in Neh 7:7b-38 records the "sons of Gibeon" (7:25) in the place corresponding to the Gibbar entry in the Ezra 2 list, it has been conjectured that Gibbar is a corruption of the place-name Gibeon. This idea is further strengthened by the observation that many other place-names begin to appear in the Ezra 2 list, especially in 2:21-35 (immediately after the Gibbar entry). However, there is no additional evidence to support any connection between Gibbar and Gibeon; it is also uncertain as to which form is the more original.

STEVEN R. SWANSON

**GIBBETHON** (PLACE) [Heb *gibbētôn*]. A Levitical city belonging to the tribe of Dan (Josh 21:23). In the parallel list in 1 Chronicles, Gibbethon is omitted. Gibbethon was assigned to the tribe of Dan as a part of its inheritance (Josh 19:44) before the tribe migrated to the N. The city is also mentioned in two narratives concerning the Philistines and Israel. Baasha made a conspiracy against Nadab, king of Israel, and killed him while his army was attacking Gibbethon (1 Kgs 15:27). Some twenty-six years later, when Elah, son of Baasha, and all his descendants were assassinated by Zimri, Gibbethon belonged to the Philistines. Zimri had not taken into consideration his rival to the throne, Omri, who was proclaimed king over Israel by his troops. Omri's army encamped against Gibbethon, and when Zimri saw that the city had been taken by Omri, he went into the citadel of the king's house, set it on fire, and died in the blaze (1 Kgs 16:15-18). These two events point out the importance of this city on the W edge of the Judean hills (*LBHG*, 45).

Outside the Bible, Gibbethon appears in two major campaign lists. Thutmose III led an important campaign into Palestine and secured a decisive victory in 1468 B.C.; one of the cities on his city list (#103) is identified as Gibbethon (*LBHG*, 151). The second extrabiblical reference to Gibbethon appears in the description of the campaign of Sargon II against Azuri (713 B.C.) and Lamani (712 B.C.), kings of Ashdod (Tadmor 1958). Although this battle is reported in 2 Kgs 17:3–6 and Isaiah 20, Gibbethon is not mentioned there. When Sargon's army invaded Palestine, he conquered Gath, Ekron, and Gibbethon on the way to capturing Ashdod and establishing it as part of an Assyrian province.

Two sites have been associated with biblical Gibbethon. The first, Tell Malat (M.R. 137140), was first proposed by von Rad (1933: 30–42). Tell Malat is located near the E boundary of the coastal plain only 20 km E of the Mediterranean, 5 km SE of Rehovot and 7 km S of Ramla. Tell Gezer sits boldly and alone on the horizon to its E. When looking at Gezer from Tell Malat one is impressed by the size of Gezer and by the close proximity that would almost certainly force a close relationship between the two sites. Surveys and trial probes at Tell Malat have yielded EB, MB II, LB, Iron I, Iron II, Persian, Roman, Byzantine, and Arabic artifacts. During the Iron II period there was a strong concentration of 9th/8th century occupation.

The second proposed site for Gibbethon is Ras Abu Hamid (M.R. 139145), located 3 km SE of Ramla and 6 km NW of Gezer. The tell is a low, oblong mound lying in the fertile coastal plain, situated at the fork of the old and new roads to Jerusalem. Like Tell Malat, Ras Abu Hamid is on the E branch of the Via Maris, which in itself would emphasize the special importance of the site, particularly in its relationship to Gezer. In 1951 a group of Mazar's students conducted a survey of the Dan region. As a result of this survey, Kallai suggested that Ras Abu Hamid be identified with Gibbethon. Prior to the survey in 1951, the early geographers who visited Ras Abu Hamid identified Iron I, Iron II, Roman (2d and 3d centuries), Byzantine, and Arab periods. Mazar's students confirmed this occupational history that the early geographers had indicated and noted Persian remains as well. Missing from all reports was evidence of LB occupation which, of course, raises questions about the Thutmose III campaign.

The most important factor in determining which tell should be associated with Gibbethon is the reference in 1 Kgs 16:17–18. Here Gibbethon is referred to as a fortified city and citadel. Ras Abu Hamid is not fortified and does not have a citadel. On the other hand, Tell Malat is a prominent fortified tell, dominating the whole region. When one looks at the history of biblical Gibbethon, including the records of Sargon, it must be concluded that biblical Gibbethon is more likely to be identified with Tell Malat.

**GIBEA (PERSON)** [Heb *gib'ā*]. Son of Sheva and grandson of Caleb's concubine Maacah (1 Chr 2:49, cf. v 48). The name probably means "highlander." In the LXX it appears as *gaibaa*. There is some speculation (Braun *I Chronicles* WBC, 42) that this name might relate to the place name Gibeah (see Josh 15:57). It is possible that other names in the genealogy of 1 Chr 2:42–50a may also refer to cities.

CRAIG A. EVANS

**GIBEAH (PLACE)** [Heb *gib'ah*]. Four places in the Hebrew Bible use this name, which simply means "hill."

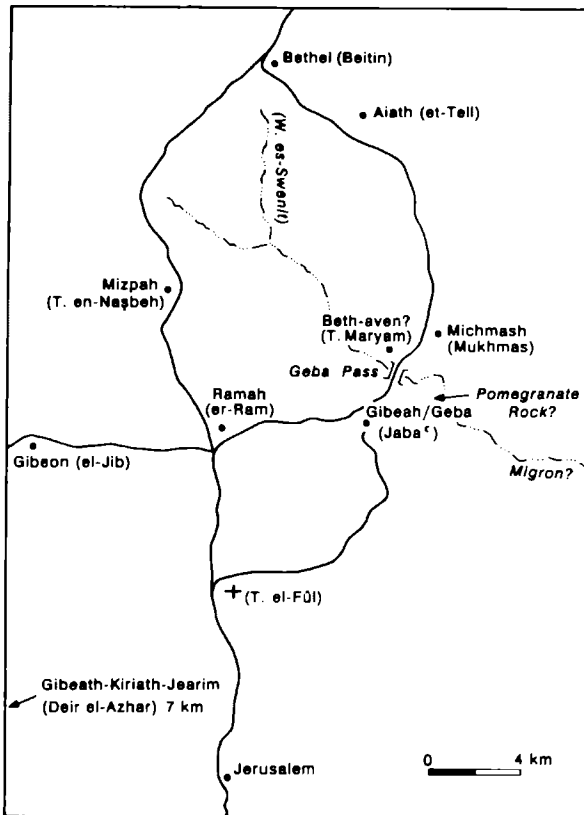

1. A town listed in a group of ten cities in the hill country of Judah (Josh 15:57) and among the cities belonging to the sons of Caleb (1 Chr 2:49). Each list associates Gibeah of Judah with towns in the region S of Hebron, otherwise its precise location is unknown.

2. Ephraimite burial place of Eleazar, son of Aaron (Josh 24:33). It is unclear whether the Hebrew here indicates an appellative ("in a hill") or a proper toponym ("in Gibeah"). If the reference indicates a city, the lack of additional biblical information makes its location impossible to determine. Eusebius mentions a "Geba" in Ephraim five miles N of Gophna (Jifna). Suggested modern candidates for this site have included Jibia (M.R. 165156), 5 km NW of Bir Zeit, and et-Tell (M.R. 174158), 1 km S of Sinjil.

3. The MT toponym "Gibeath-Kiriath" (LXX: "Gibeath-Jearim") in the Benjamite town-list (Josh 18:28) is probably a textually truncated form of an original "hill of Kiriath-Jearim" (Miller 1975: 147–50), a site known from 1 Sam 7:1–2 and 2 Sam 6:2–4 as the resting place of the ark of the covenant until it was removed to Jerusalem by David. Kiriath-Jearim is commonly identified with modern Deir el-Azhar (M.R. 159135), near Abu Ghosh, and its "hill" was probably a "high place" in this vicinity.

4. An important city in Benjamin whose name appears in a wide variety of forms; e.g., "Gibeah" (Judg 19:13), "Gibeah which belongs to Benjamin" (Judg 19:14), "Gibeah of Benjamin" (1 Sam 13:2), "Gibeah of the Benjaminites" (2 Sam 23:9), "Gibeah of Saul" (Isa 10:29), "Gibeah of God" (1 Sam 10:5), and possibly "Geba" (1 Sam 13:3).

The location and modern identification of Gibeah is a long-disputed issue. In 1841, E. Robinson first proposed that "Gibeah" and "Geba" were variant toponyms referring to the same city which once existed at the site of modern Jaba<sup>c</sup> (M.R. 175140), 9 km NE of Jerusalem. See Fig. GIB.01. Later, Robinson emended this opinion on the basis of Judg 19:13, which supposedly located a distinct city of Gibeah on the watershed highway between Jerusalem and Ramah (er-Ram). Robinson therefore chose the prominent hill of Tell el-Ful, 5 km N of Jerusalem, as the site of ancient Gibeah, while he continued to identify Jaba<sup>c</sup> as Geba (1841: 6.440–42). Yet scholarly debate over Gi-

GIB.01. Area map of proposed sites for Gibeah.

beah's location continued until W. F. Albright's excavations at Tell el-Fūl in 1922–23 and 1933 revealed early Iron Age remains, which were associated with the "Gibeah" of Judg 19–20, and the foundations of an Iron Age tower, which Albright identified as the fortress of Saul (1 Sam 11–15), the first king of Israel (1924: 7–17; 1933: 6–12). Most scholars found these connections conclusive, and virtually every biblical atlas thereafter has identified Tell el-Ful as Gibeah.

However, P. Lapp's excavations at Tell el-Fūl in 1964, which ostensibly refined and confirmed Albright's hypothesis (1965: 2–10), actually tended to raise new questions about Tell el-Fūl. First, the remains from the so-called Iron I (Judg 19–20) village were meager and of questionable provenance (Franken 1963: 82), while "Saul's Fortress" (the base of a tower) could not be dated more precisely than ca. 1025–950 B.C., which includes the reigns of David and Solomon. Secondly, Lapp shifted Tell el-Fūl's Iron II occupation to the "late 7th–early 6th century B.C. horizon rather than the 8th–7th century B.C." (1965: 3) which implies that the site was unoccupied at precisely the time in the late 8th century B.C. when "Gibeah" clearly appears

in the oracles of the contemporary prophets Hosea (5:8) and Isaiah (10:29).

In view of these discrepancies, J. M. Miller's literary-critical studies suggested that Robinson's original placement of Gibeah/Geba at Jabaʿ was probably correct (1975: 151–62). Such an identification is consonant with biblical information which consistently associates Gibeah closely with the area near the Geba/Michmash Pass (Arnold 1987: 101–8). A preliminary archaeological survey of Jabaʿ (Kochavi 1972: 183) indicated Iron Age and Persian remains at the site, though more precise archaeological investigations are needed.

If it was located at Jabaʿ, ancient Gibeah was perched high on a hill above a deep, cave-pocked canyon (Wadi es-Swenit) on the N fringes of Benjaminite territory. Judges 20 contains vestiges of a tradition which described an elaborate ambush of the city by neighboring Ephraimite warriors who sprang out of hiding-places in the Geba Pass and massacred Gibeah's civilians after its defenders had been lured from the city. The surviving Gibeahite soldiers then reportedly fled to the nearby "Pomegranate Rock" (see RIMMON) where they remained four months (Judg 20:47). This tradition behind the presently edited text probably reflects historical intertribal conflicts between Benjamin and Ephraim early in Israel's history; the editorial additions to the chapter rendered the event as a pan-tribal attack on Gibeah by the entire cultic confederacy of united Israel.

The putative cause of the Gibeah massacre, the rape-murder of a Levite's wife (Judg 19), is apparently a later fictional literary addition to the tradition for the purposes of legitimizing Ephraim's participation in the slaughter.

Gibeah is also prominent in stories relating the rise of Saul as king of Israel. 1 Sam 9–14 seems to contain an ancient pro-Saul narrative, now rearranged and edited (Miller 1974), which once described how young Saul was sent on a mysterious mission to "Gibeah of God" (10:5; see GIBEATH-ELOHIM) where he struck down a Philistine official (13:4). The Philistines responded by fortifying neighboring Michmash while Saul established his base across the valley in the village of Gibeah (13:15), or in the nearby "Pomegranate" cave (14:2) in the valley itself (see MIGRON).

The original conclusion to this Saul narrative seems to have been replaced by a Judean narrative in 14:1–46 (Blenkinsopp 1964) which describes how Jonathan single-handedly defeated the Philistines at Michmash from his base at "Geba," probably a later Judean toponym for the site known in earlier Benjaminite lore as "Gibeah." This narrative probably arose in pro-Davidic circles intending to discredit Saul's accomplishments (Arnold 1987: 184–218).

The successful expulsion of the Philistines from the Benjaminite hill country enabled Saul to establish his headquarters at the city, so that it acquired the epithet "Gibeah of Saul" (1 Sam 11:4; 15:34; 2 Sam 21:6; Isa 10:29). There is no evidence that Gibeah served as Israel's "capital" in the modern sense, but only as Saul's base-camp for his campaigns against surrounding enemies (1 Sam 22:6; 23:19). Yet Gibeah evidently remained the home of Saul's progeny after his death, for seven Saulides were executed there by Gibeonites at the behest of David (2 Sam

21:6), ostensibly in atonement for an otherwise unrecorded massacre at Gibeon.

After the mention of David's hero "Ittai, son of Ribai of Gibeah" (2 Sam 23:29 = 1 Chr 11:31), references to Gibeah disappear permanently from Judean literature (except for the archaism in Isa 10:29). Anti-Saulide hostility may have occasioned a slight change in the city's name: according to 1 Kgs 15:22, King Asa of Judah constructed new border fortresses at Mizpah (Tell en-Naşbeh) and "Geba"—modern Jaba<sup>c</sup>. After this period, references to "Geba" in Judean literature exist through the post-exilic era. See GEB A.

The last references to Gibeah both seem to refer to the same event: the Syro-Ephraimite invasion of Judah, ca. 735 B.C. Around this time, the Israelite prophet Hosea warned the N Benjaminite cities of Gibeah, Ramah, and Beth-aven of an imminent attack (5:8). Hosea seems to have regarded this approaching invasion of Judah as symptomatic of Israel's treachery "since the days of Gibeah" (9:9; 10:9), a probable allusion to the tradition of Ephraim's ancient ambush of Gibeah contained in Judges 20.

Shortly after Hosea's warnings, the Judean prophet Isaiah described the actual Syro-Ephraimite invasion force as it passed through Aiath and Michmash and crossed the Geba Pass, causing "Gibeah of Saul" to flee (10:27–29); the prophet probably uses the old term as a poetic archaism for the border fortress of Geba.

PATRICK M. ARNOLD

**GIBEATH-ELOHIM (PLACE)** [Heb *gib<sup>c</sup>at ha<sup>c</sup>ēlōhīm*]. A site, meaning "hill of God," in the Benjaminite hill country to which Samuel directed Saul in fulfillment of a third prophetic sign confirming his anointment as prince over Israel (1 Sam 10:5). The Hebrew place name, in conjunction with the report of Saul's predicted prophetic rapture in the company of celebrating prophets, indicates that the site was a cultic "high place." Evidently the shrine was temporarily under occupation in Saul's time, since a

Philistine *nešib* (perhaps meaning "governor" or "garrison") is explicitly mentioned at this location.

Since the toponym Gibeath-elohim occurs only in 10:5, most scholars agree that the site was not a completely distinct city in Benjamin, but was an alternate name, or perhaps a special precinct, associated with some well-known city. A. Demsky suggested that "the hill of God" was actually the famous shrine at Gibeon, the most likely city in Benjamin to have been occupied by Philistines (1973: 27–28). This theory is undermined not only by the lack of textual evidence to point to such a conclusion, but also by the absence of any Philistine remains from the el-Jib excavations. See GIBEON. Similar problems plague W. F. Albright's proposal to find Gibeath-elohim at Burj Beitin (1924: 28–43).

Several textual clues suggest that Gibeath-elohim ought to be identified with Gibeah/Geba of Benjamin. Samuel's third prediction that Saul would undergo prophetic rapture on reaching Gibeath-elohim (10:5) appears to be fulfilled in 10:10 when he is reported to have reached ecstasy on arrival at "Gibeah." Though Samuel ordered Saul then "to do whatever his hand found to do," the story presently lacks any fulfillment of this command. J. M. Miller, therefore, proposed that the original Saul folktale once described how Saul then struck down the Philistine *nešib* in Gibeah (cf. 13:4), thus precipitating the Hebrew revolt (1974: 157–63). A later Judean gloss, however, also credited Jonathan with the same deed in Geba (13:3), the Judean toponym for Gibeah. This report probably arose in Davidic circles with the intention of eclipsing Saul's responsibility for leading the revolt against the Philistines (Arnold 1987: 73–77).

Gibeath-elohim should, therefore, be regarded as the cultic name for the "high place" in or near Gibeah/Geba of Benjamin, located at modern Jaba<sup>c</sup> (M.R. 175140) 9 km NE of Jerusalem. No excavations have yet been undertaken at this site.

PATRICK M. ARNOLD

**GIBEATH-HAARALOTH (PLACE)** [Heb *gib<sup>c</sup>at ha<sup>c</sup>ārālōt*]. A place within the tribal territory of Benjamin near Gilgal, where the Israelites were circumcised after crossing the Jordan River (Josh 5:3). The name literally means "hill of the foreskins." The KJV understood the reference to the place *gib<sup>c</sup>at* in the list of Benjaminite towns (Josh 18:28) also to be a reference to Gibeath-haaraloth, although RSV understands it as a reference to Gibeah. Because the location of Gilgal is unknown, the location of Gibeath-haaraloth is unknown; both may have

been campsites rather than inhabited towns (see Boling and Wright *Joshua* AB, 185, 192).

Two aspects of the narrative are interesting. The first is the reference to the primitive flint knives used in the ceremony (Josh 5:3), reflecting the antiquity of the custom of circumcision. The second is the fact that this circumcision is, in fact, a *second* circumcision or *re-circumcision* (5:2; see Boling and Wright *Joshua* AB, 188–89, 193–94, for a discussion of this enigmatic passage).

Bright (*JB* 2: 573) considered Gibeath-haaraloth to be a spot where in later years the Israelite rite of circumcision was carried out in relation to the great shrine at Gilgal. Boling, however, sees it as a pre-Yahwist name associated with one of the little tells near Kh. el-Mefjir (M.R. 193143), 1.2 miles NE of Jericho. It may have been associated with a pagan ritual of circumcision—a rite of passage for marriage or war—before the Israelites took it over and reformed it along more orthodox Yahwist lines (*Joshua* AB, 189). Because circumcision in time became, along with Passover, one of the main features of continuing Jewish faith, the circumcision at Gibeath-haaraloth—symbolizing entrance into the Promised Land and into the covenant with Yahweh as well as purification for Holy War and conquest—is much more important than its single reference in the text would suggest.

HENRY O. THOMPSON

**GIBEON** (PLACE) [Heb *gib'ôn*]. An important city of Benjamin, now identified with modern el-Jib (M.R. 167139), 8 km NW of Jerusalem. See Fig. GIB.01. The village is located on a small limestone hill surrounded by agricultural fields at an altitude of some 750 m above sea level. Eight nearby springs provide an abundant water supply.

### A. History

The earliest narrative involving Gibeon (Josh 9:3–10:15) relates that Joshua's invading army was tricked into a solemn peace treaty with Gibeon's Hivite people, who had disguised themselves as foreigners requiring Israel's protection. As punishment for this successful ruse, the Gibeonites were reportedly forced to become "wood-cutters and water-carriers" for the Israelites, who, for their part, felt contractually obliged to rescue Gibeon from a retaliatory attack by five neighboring kingdoms. In the ensuing battle, Joshua's warriors drove the Canaanites from Gibeon down into the Beth-horon Valley while God "hurled huge hailstones from heaven" (cf. Isa 28:21) on them as the sun and moon stood still in their courses.

This famous story probably preserves etiological traditions explaining the historical subservient relationship of the Hivite citizens of Gibeon to the Israelites, an arrangement which may have been ratified at one point in some form of a vassal treaty—cf. 2 Sam 21:2 (Blenkinsopp 1972: 32–36). However, the present literary placement of these traditions in the account of Joshua's invasion of Canaan is problematic for biblical historians, since archaeologists have found no occupational remains at Gibeon in the LB Age in which the conquest stories are set; only a few burials from this period were uncovered (Pritchard 1961: 22–23).

Archaeological remains at el-Jib show that Gibeon was

reconstructed in the early Iron Age (1200–900 B.C.); the city is mentioned prominently in narratives relating to the rise and establishment of the Israelite monarchy, which occurred during this period. Some scholars (e.g., Blenkinsopp 1974: 1–7) have proposed that Saul established his capital city at Gibeon after the successful Hebrew uprising against the Philistines. Textual support for this argument (the occasional confusion of the toponyms "Gibeon" and "Gibeah") is rather weak. Moreover, 2 Sam 21:1 reports that Saul, in violation of the Joshua treaty, massacred the Gibeonites during his reign. This report might simply indicate that Saul attempted at one point to eliminate Gibeon as an ethnic Hivite enclave lodged in the midst of his growing Israelite kingdom.

David's forces under Joab reportedly defeated Abner's Saulide warriors at "the pool of Gibeon" in what appears to have been a ritual military contest (2 Sam 2:12–17; 3:30). This "pool" undoubtedly refers to the impressive water system uncovered at el-Jib during recent archaeological excavations (Pritchard 1962: 64–74; Cole 1980: 21–29). See Fig. GIB.02. The bottom of the main cistern, a rock-hewn shaft 11.3 m in diameter and 10.6 m deep, is connected to a groundwater chamber by a 13.7 m sloping tunnel. See Fig. GIB.03. Constructed in the late 12th or early 11th century B.C., this pool apparently remained in use until the early 6th century B.C., when it was again mentioned in the Bible (Jer 41:12). The slaughter of Abner's forces there in the early 10th century caused the area around the pool thereafter to be called the "Field of Blades" (2 Sam 2:16).

Gibeon again witnessed bloodshed as Joab murdered the renegade Amasa there at the "great stone" (2 Sam 20:8–13). This term again suggests ritual battle, since it seemingly refers to a kind of massive cultic rock that is occasionally found in Palestine. No such object has yet been uncovered at el-Jib, for only a small portion the site has been excavated.

The account of the Gibeonites' execution of seven descendants of Saul (2 Sam 21:1–9) attributes a three-year famine in David's reign to Saul's otherwise unrecorded slaughter of Gibeonites. Supposedly in retribution for this massacre, David allowed the men of Gibeon to kill Saul's progeny at Gibeah (LXX: Gibeon). This narrative apparently literarily justifies David's attempt to exterminate the surviving Saulide claimants to the throne of Israel (except Mephibosheth, kept in virtual house arrest in Jerusalem). In any case, the story underscores the impression that the Gibeonites were somehow considered a legally protected ethnic group within Israel.

Gibeon achieved prominence as a cultic site during this early monarchical period. 1 Chr 16:39; 21:29; and 2 Chr 1:3, 13, respectively, place the Tabernacle of Moses and the Tent of Meeting at Gibeon during David's reign. Though these objects are often regarded as imaginary or as late cultic projections into the past, their location at Gibeon seems to signify its holiness in this era. 1 Kgs 3:4–5 (= 2 Chr 1:5–13) similarly places Solomon's famous inaugural dream at the Gibeon high place, at which the king reportedly sacrificed 1000 whole offerings at the altar.

The fact that no sanctuary was excavated at el-Jib has led some commentators to speculate that the high place

**GIB.02.** "Great Pool" of Gibeon, ancient cistern at el-Jib. (Photograph by J. Huesman, courtesy of P. M. Arnold)

GIB. 03. Tunnel of water system at Gibeon (el-Jib). (Photograph by J. Huesman, courtesy of P. M. Arnold)

might have existed, not in Gibeon itself, but atop towering Nebi Samwil, nearly 2 km S of el-Jib. In this view, Gibeon took its name from the impressive nearby "hill," while its populace served as "wood-cutters and water-carriers" for the famous hill shrine (Blenkinsopp 1972: 7).

This important sanctuary, and its cultic personnel, might also explain Gibeon's inclusion in the list of the Levitical cities (Josh 21:17). Though set in Joshua's time, this document is widely regarded as a list of Levitical priestly communities dating to monarchic or even post-exilic times which was artificially placed within the Conquest narratives. Similarly, Gibeon's mention in the list of towns granted by Joshua to the tribe of Benjamin (Josh 18:25) probably derives from official town-list documents of the Judean monarchy or even the Persian colonial administration.

Egyptian Pharaoh Sheshonk I (biblical Shishak—cf. 1 Kgs 14:25) included Gibeon in a list of cities either visited or captured in his late 10th century B.C. campaign into

Palestine (ANET, 242). This entry is the earliest extrabiblical reference to Gibeon.

Gibeon is not mentioned again in the biblical narrative until the events surrounding the fall of Jerusalem to Babylonian forces in 586 B.C. The prophet Jeremiah's antagonist, Hananiah, who mistakenly assured Jerusalem of safety from attack, hailed from Gibeon (Jer 28:1). After the Babylonian invasion, Gibeon again became the site of bloody combat. The loyal Johanan unsuccessfully attacked Ishmael, Gedaliah's assassin, at the "great pool" of Gibeon (Jer 41:12). Ishmael managed to escape.

Post-exilic references to Gibeon are decidedly more mundane than the earlier stories about the city. Neh 7:25 reports that 95 Gibeonites accompanied those returning to Judah from exile in Babylon; many of these may have assisted in the repairs to the city wall of Jerusalem reported in Neh 3:7. The genealogies in 1 Chr 8:29 (cf. 9:35) also may have originated during the Persian era.

Gibeon was to figure one final time in historical events of the biblical period. Josephus reports that, in the course of the Roman attempt to quell the Jewish Revolt, a force under General Cestius Gallus ascended the Beth-horon Valley from the coastal plain in October of 66 A.D. and camped for the night at Gibeon. The army then continued unmolested the next day in its drive toward the capital city of Jerusalem (JW 2.19.1).

### B. Site Identification

E. Robinson was the first modern scholar to present reasons for identifying Gibeon with el-Jib (1874: 455). Robinson argued that the site of el-Jib not only matched biblical topographical descriptions, but that the modern Arabic name of the village preserved the Hebrew toponym from antiquity as well. Robinson's identification was widely accepted by scholars throughout the ensuing decades. The few remaining scholarly doubts regarding this identification were allayed after J. B. Pritchard's excavations at el-Jib in 1956, 1957, 1959, and 1960. Included among the finds were thirty-one jar handles inscribed with the name "Gibeon" (*gḇn*) in ancient Hebrew script (Cross 1962: 18–23).

**GIDDALTI** (PERSON) [Heb *giddalti*]. One of the fourteen sons of Heman who were appointed to prophesy with musical instruments under the direction of their father and the king (1 Chr 25:4). Giddalti received the twenty-second lot cast to determine duties (1 Chr 25:29). The name has the form of a *Pi<sup>l</sup>el* perf. verb, "I have magnified." Scholars have long suggested that the final nine names in 1 Chr 25:4 can be read as a liturgical prayer. For a reconstruction and translation of the prayer, a summary of interpretative possibilities, and bibliography, see ELIATHAH.

J. CLINTON MCCANN, JR.

**GIDDEL** (PERSON) [Heb *giddel*]. The name of two individuals present in the postexilic writings.

1. A temple servant who was the progenitor of a family which returned from Babylon with Zerubbabel (Ezra 2:47 = Neh 7:49). Although 1 Esdras is often assumed to have compiled from Ezra and Nehemiah, this family does not appear in the parallel passage 1 Esdr 5:30. Instead the name Cathua appears in that sequence. Such differences raise questions about the sources of and literary relationships among 1 Esdras, Ezra, and Nehemiah.

2. A servant of Solomon who was the progenitor of a family which returned from Babylon with Zerubbabel (Ezra 2:56 = Neh 7:58 = 1 Esdr 5:33). Although the NEB follows a portion of the manuscript tradition in its use of the textual variant "Isdael" for translating 1 Esdr 5:33, Hanhart (1974) prefers "Giddel" (Gk *giddel*) in his critical edition of 1 Esdras.

MICHAEL DAVID MCGEEHE

**GIDEON** (PERSON) [Heb *gid'on*]. One of the great tribal leaders in the era of the book of Judges (chaps. 6–8). He is also called Jerubba'al, for which a popular etymology is given in 6:25–32 (see below). Although his story is told at length, Gideon is not said to have "judged" (Heb *špt*) Israel, unlike most of the worthies in the book. Nor is it directly claimed by narrator or compiler that he "saved" (Heb *yšc*) Israel, as is claimed for several others: Othniel, Ehud, Shamgar, and Tola. What did Gideon do?

He was remembered for mobilizing a force which at last put an end to annual raids at harvest time, from across the Jordan into the broad Jezreel–Esdraelon plain and down the coast. The raiders were camel-riding Midianites and other "Easterners." There were also, concurrently, the annual plunderings by Cisjordan nomads (Amalekites).

Gideon was also remembered for having an exceptional penchant for oracle-seeking and divinatory inquiry, but with finally unhappy results.

It is not clear that the Midianites in these stories are

merely direct descendants from the Midianite power center of the N Hejaz in the era of Moses and the wilderness wanderings, since domesticated camels were not generally known in the area until ca. 1200 B.C.E. The stories may reflect a recent wave of Midianite immigration down the N–S desert routes, which introduced the military use of domesticated camels (most likely from E Anatolia) to both Hejaz and the wider biblical scene (Mendenhall 1973: 163–73). These domesticated camels made possible vastly extended patterns of seasonal transhumance, as well as long distance raids from oases in the eastern desert. If, as generally concluded, the stories relate to the early- or mid-11th century B.C.E., we may have events contemporary with the Edomite King Hadad's victory over Midian in S Transjordan (Gen 26:35).

While the raiding in Gideon's day extended as far S as the coastal town of Gaza, the major threat was posed for Manasseh and Ephraim.

The Israelite settlements of Manasseh and Ephraim were mostly concentrated in the Cisjordan hill country, where inhabitants lived in unwallled villages, subsisting mainly by terrace farming and small cattle husbandry (*IDBSup*, 11–13; Stager 1985). Scattered settlements out in the fertile plain of Jezreel were confronted with a new and unprecedented form of terror (Judg 6:2–6). It is difficult to imagine a more serious plight for village farmers who do not have the protection of standing armies, which early Israelites had repudiated precisely because of the high economic and social cost of such protection. The Midianites were like "a plague of locusts" (6:5; 7:12), causing harassed farmers to hide in caves or retreat to high country, leaving fields unguarded.

According to the narrative, there was also an inner-Israelite threat. The name Gideon means, roughly, "hewer, slasher, hacker." He was son of Joash (a Yahwist name), whose clan or regional village association, within the territory of Manasseh, was Abiezer. Joash and family lived at Ophrah (probably at or near 'Affuleh, a very exposed position out in the center of Jezreel valley). Joash was apostate, being the proprietor of a cult place at Ophrah where there was a sacred tree and where worship honored Baal. The place was also known for its Asherah. Thus was posed the inner threat to Israelite integrity and unity, "gods of the Amorites" ("westerners") as specified in 6:10.

The narrative of Gideon's career begins with a visit from Yahweh's recruiting angel. Like Abraham in Genesis 18, Gideon entertained God unawares. Unlike those who have fled, young Gideon is at home in Ophrah threshing wheat, not with oxen and sledge on an open elevation, but in the cramped space of a wine press, for fear of discovery by Midianites. Responding modestly to the messenger's announcement of a commission, couched in terms of Gideon's physical prowess, Gideon is partly reassured by the declaration that God is, in truth, with him—a clear echo of the call of Moses in Exodus 3 (Boling *Judges* AB, 128–37). Yet Gideon holds out for an authenticating sign, while hastening to meet the obligation of hospitality to the stranger. He prepares a banquet which becomes a sacrificial offering when the messenger, who has been resting in the shade of the sacred tree, brings forth fire from the rock (cf. the angelic audience with Samson's parents in

chap. 13). Gideon promptly builds an altar and names it: Yahweh shalom.

The story which comes next, where Yahweh speaks directly to Gideon (6:25–32), accounts differently for an altar which Gideon built at Ophrah. It also accounts for more, but it was necessary to learn first about Gideon's recruitment. In this story Gideon receives Yahweh's instructions to dismantle his father's altar, chop down the Asherah, replace them with an altar to Yahweh, and sacrifice to Yahweh his father's finest bull (Emerton 1978). He does this, but for fear of family and townsfolk, he does it under the cover of darkness. When the townsmen discover what has happened and demand the life of Gideon, Joash comes to his son's defense, having decided it will be better to let Baal, if he is a god, defend himself. With this account of his activity as reformer, the narrator legitimates by means of popular etymology the name Jerubba'al: "Let Baal Prosecute" (6:25–32).

The recently excavated 12th century "Bull Site," in the territory of Manasseh, may (Mazar 1983) or may not (Coogan 1987) have been Israelite. In any case it illustrates religious options which continued to be available after the reformation of Israel, in the post-Moses era.

Similarly, original significance of the element *ba'al* (semantic core "lord" or "master") in the name Jerubba'al is unclear. There are other examples of Israelites bearing names compounded with *ba'al*, presumably in reference to Yahweh, with no clear indication of religious syncretism. Within this narrative, however, given the description of Joash's place, the issue is Yahwism versus the old style fertility cult, in the productive plain of Jezreel. The story explains how Gideon the Yahwist reformer could properly wear a *ba'al* name. On the other hand, it was the manner in which he carried out the reform, and other deeds in the stories which follow, which earned for him the nickname "Hacker."

Gideon's reluctance and insistence upon divine assurance beforehand is also the theme of the fleece-test story. Gideon holds out for a private miracle and God complies (6:36–40).

The roles are reversed in the next two units. In the first, "the spirit of Yahweh clothed Gideon" (6:34), with the result that he rallies from the tribes of Asher, Zebulun, and Naphtali (in addition to his own Manasseh) an army far too large for the occasion. Yahweh thus resorts to his own form of testing, so that all those who are afraid of war are allowed to go home. The force is reduced to a mere three hundred Abiezrites, those who lapped water like dogs. Is there any special significance to the way they drank? Does it imply some association or allusion to the clan of Caleb ("Dog")? It is most often interpreted as showing how Yahweh intentionally chose the less alert (7:2–8) to magnify the proportions of Yahweh's achievement in activating Gideon and the three hundred. It appears that two cycles of Gideon stories, one remembering Gideon with three hundred Abiezrites and the other involving those tribes whose claims and interests impinged directly on the Jezreel plain, have been brought together by a compiler to make a theological point.

A new set of orders next instructs Gideon to conduct a nighttime reconnaissance, from which Gideon learns that Yahweh has already inspired adequate fear of Gideon in

the Midianite camp. There follows the sound and light demonstration—clay storage jars breaking to reveal blazing torches all around the camp. Terrified Midianites, unable to distinguish between friend and foe, slay many of their own before taking scattered flight with Gideon's force in pursuit (7:1–22).

At the beginning of chap. 7, the leader is introduced as "Jerubba'al" and the identity promptly clarified, "really Gideon" (7:1, again in a concluding framework verse, 8:35). Otherwise, in chaps. 7–8 the nickname is used exclusively, except in 8:29 and 35. Those verses, in turn, belong to a connective with the story of Abimelech in chap. 9, which identifies Jotham repeatedly (9:2, 5, 16, 19) as son of "Jerubba'al" (the name is Jerubba'al also in 1 Sam 2:11, but *yerubbeset* in 2 Sam 11:21).

While it is possible that the names Gideon and Jerubba'al should be interpreted as belonging originally to different individuals, it is more likely that two or more streams of tradition, each favoring one name or the other, have contributed to one continuous but sometimes disjointed story (Emerton 1976). There are other indications that this is so.

The story line continues with Gideon sending messengers throughout Ephraim, whose territory opposite the mouth of the Jabbok is in the path of Midianite retreat. Troops from Ephraim capture two Midianite princes, Oreb ("Raven") and Zeeb ("Wolf"), at sites where their execution fixed the names of Oreb's Rock and Zeeb's Winepress. Taking the heads of Oreb and Zeeb as evidence, the Ephraimites continue E and catch up with Gideon in Transjordan. They complain to Gideon about not being included in the initial muster, but are pacified by Gideon's admission that their achievement is the greater (7:24–8:3).

In the next narrative unit (8:4–28), Gideon is prowling the E Jordan valley in search of two Midianite Kings, Zebah and Zalmunna. To the towns of Succoth (probably Tell Deir 'Alla) and Penuel (Tulul edh-Dhahab?), when they refuse to provision his troops, Gideon promises retaliatory vengeance. Place names appearing in the description of the pursuit (Karkor, Nobah, Jogbehah) suggest that the Midianites were headed for the protective reaches of the vast Wadi Sirhan in the E desert. Not all of them made it to safety. When Zebah and Zalmunna are captured and interrogated by Gideon, we learn that Gideon has been using the people's militia in pursuit of private blood vengeance (8:19). Is that why Succoth and Penuel were not persuaded to provide supplies and so, subsequently, were destroyed by Gideon? Is that also, perhaps, why, in telling the exploits of this one who was in fact a savior of Israel, Gideon is severely caricatured?

While the narrative's interest lies primarily in theological and characterological matters, there is nothing implausible about the deployment and strategy, reconnaissance and timing, pursuit and search in chaps. 7 and 8. These have been lauded by military experts as admirably credible (Malamat 1953).

The final story in the sequence recounts Israelites' appeal to Gideon to be the one who will "rule" (Heb *msl*) over them. Without using the *mlk* words, it looks nonetheless like an offer of dynastic kingship. Gideon properly declines, where Yahweh is acknowledged sovereign, while requesting instead that the troops give him all the gold

rings that they had taken as booty. With the gold he makes an ephod, an object of hallucinatory aid in oracle-seeking (cf. story of Micah in Judges 17). That is, while piously declining the right to "rule," he eagerly accepted the power of oracular authority. The result was that "all Israel played the harlot" at Gideon's ephod, with dire consequences for Gideon's family (8:22–28). It is entirely possible, but not demonstrable, that at some point Gideon did bear the title of *melek* ("King"), in view of the name that he gave to the son of his Shechemite concubine: Abimelech, "My Father is King."

According to the compiler, Gideon's legacy to Israel was "forty years" (meaning perhaps "a generation") of "quiet," undisturbed by Midianite and other raiders from Transjordan. It was no doubt thanks to Gideon that "the day of Midian" became a standard way of saying "Israelite victory" (Isa 9:4 [Heb 9:3]; cf. Ps 83:11 [Heb 83:12] and Isa 10:26). Much later, Gideon is named in a NT roster of worthies who through faith had "conquered kingdoms" (Heb 11:32).

Gideon's wealth and prominence are also recalled in the tradition of his many wives and seventy sons, "his own offspring." The number seventy, which includes neither Jotham nor Abimelech, probably reflects a combination of genealogical and political relationship. There was a sonship which could be acquired by negotiation and demonstration of loyalty. Thus, at Gideon's death there would be a dissipation of leadership; this formed the basis for Abimelech's pursuit of kingship at Shechem, liquidation of the seventy, and Jotham's denunciation in Judges 9.

Gideon's career belongs to the mid-12th century, to judge from the massive destruction level at Shechem in Iron I, which is surely to be correlated with the Abimelech story.

Thus, Gideon/Jerubba'al was a military deliverer who, perhaps, for a period became "King" over a segment of the Israelite populace. Holding out for the exercise of highest authority, with or without the old labels, he had settled for something short of commendable faith in the view of the storytellers and their compilers.

ROBERT G. BOLING

**GIDEONI** (PERSON) [Heb *gid'ōni*]. Father of the chief (*nāšp*, Num 2:22) Abidan of the tribe of Benjamin. Each of the five references to Gideoni in the OT occurs in a tribal list where his mark of distinction is his status as the father of Abidan. Under the leadership of Gideoni's son

Abidan, the tribe of Benjamin participated in the census of Israelite men able to go to war conducted by Moses (Num 1:11, 36–37), presented its offerings on the ninth day of the twelve-day celebration of the dedication of the altar (Num 7:60, 65), took its proper place on the W side of the tabernacle in the Israelite camp (Num 2:22), and assumed its position in the order of march at the Israelites' departure from Mt. Sinai (Num 10:24). The name Gideoni may mean: (1) "one with a disabled hand" (Noth *IPN*, 227), (2) "a youth" (*HALAT* 173), or (3) "one who cuts down trees" (*IDB* 4: 395).

DALE F. LAUNDERVILLE

**GIDOM** (PLACE) [Heb *gid'ōm*]. According to the RSV (Judg 20:45), the name of a place near the rock of Rimmon where the Israelites slew the last two thousand Benjaminites (more likely the last "two contingents [Heb *'alpayim* of men") in the civil war that followed the rape of the Levite's concubine (Judges 19–20, esp. 20:4). The context suggests that Gidom was located in the wilderness E of Gibeah, although it is possible that the phrase *'ad gid'ōm* does not delimit the geographical extent of this final battle ("as far as Gidom") but rather its duration ("until they had been cut down"), reading *gid'ōm* as an infinitive construct with a 3 masc. pl. suffix (so NEB and Boling, *Joshua* AB).

GARY A. HERION

**GIFTS, SPIRITUAL** [Gk *pneumatika, charismata*]. Special gifts bestowed by God on individual members of the Christian community for the edification of the whole community.

- A. Background
- B. Lexical Matters
- C. Paul
  - 1. The Service of the Church
  - 2. The Assembly

**A. Background**

Biblical religion witnesses to the activity of the divine spirit (whether in the OT as *rūah Yahweh* or in the NT as the HOLY SPIRIT) which infuses the human person in worship, service, and religious ecstasy. Examples in the OT range from the visitation of *rūah* upon characters as diverse as Samson, Saul, Micah, and Ezekiel (Judg 14:6, 19; 1 Sam 10:10; Mic 3:8; Ezek 1:2) to the cultivating of natural skills and abilities in the case of Bezalel (Exod 35:30, 31) and the oracles of the prophets and sages of Israel (Wis 7:25–27; 9:17). The possession of "spiritual gifts," however, looks forward to the messianic age when Isa 11:2 was to be fulfilled and the spirit of Yahweh was believed to rest upon and endue God's anointed one. The latter event is associated with Jesus' baptism and ministry (according to the multistrand NT tradition, e.g., Luke 4:18–19) and epitomized in Acts 2:22; 10:38. After Pentecost, the birth of the Church was attested by apostolic "signs of power" as a mark of the new age of messianic fulfillment which had arrived with the exaltation of Jesus the Messiah and the gift of the divine Spirit (Acts 2:17–39). One phrase which sums up the manifestation of the

Spirit in the experience of NT Christians is "spiritual gifts," and the setting of the term in the new age, as part of the conquering, newborn elation the first believers felt, is an important factor in its understanding.

### B. Lexical Matters

The general sense of the term "spiritual gifts" covers all endowments of the Spirit found in Christian experience and designed to be of service to the Church. Two Greek words are used in the NT: *pneumatika* (employed in the sense of "spiritual gifts" in e.g., 1 Cor 14:1, 12; and most likely 2:13; 12:1 and best translated with Sullivan as "gifts of inspiration") and *charismata* which is the more important term, found only in the Pauline corpus (sixteen times) and 1 Pet 4:10. *Charisma* means literally a "gift-in-grace," deriving from *charis*, "grace." At the heart of the word is God's free favor which rules out all notion of merit (Rom 4:4) or reward (Rom 6:23). It is, therefore, a term suited to express God's initiative in restoring humankind to wholeness and harmony with the divine purpose and could stand as a synonym for "eternal life," the supreme *charisma* (Rom 5:15; 6:23; 11:29). Paul's ministry is closely bound with the experience of this gift-in-grace (2 Cor 1:11), an idea found also in 1 Pet 4:10 where *charisma* is one of service which speaks and embodies the word of "grace." The intimate association of God's grace which justifies the godless (Rom 4:5) with *charisma* is emphasized by Käsemann who regards Paul's teaching on "spiritual gifts" as "the projection into ecclesiology of the doctrine of Justification by faith" (Käsemann 1964: 75–76).

*Charisma*, then, is bound up with *charis*. This link is attested in Philo (*leg All III.78*) but the use of *charisma* is rare, not found in non-Christian Greek writers or Josephus. The LXX evidence is uncertain (Sir 7:33 has *charis* in one manuscript tradition with *charisma* in Codex S; 38:30 has *chrisma* with *charisma* as a textual variant in Codex B\*). Theodotion uses *charisma* once to render the Heb *hesed*, covenant love (Ps 30[31]: 22[21]). The NT data have to be considered on their own, without much assistance from parallel sources; and the lexical distribution shows that both *pneumatika* and *charismata* are words pre-eminently belonging to the Pauline vocabulary.

### C. Paul

From the wording of 1 Cor 12:1–11 it is clear that the issue of "manifestations of spirit" was a heated topic at Corinth. Paul pays tribute to the rich—if exotic—endowments of spiritual life found in that congregation (1 Cor 1:7). Evidently, the Corinthians had inquired of Paul how these gifts were to be exercised; hence the formula "I would not have you ignorant" (12:1) is meant to address the phenomena of enthusiasm and ecstatic utterances that were prominent features of Corinthian church life. The question raised has to do with *ta pneumatika*, best taken in the neuter sense of gifts exercised in public worship. Paul concedes that such signs of enthusiastic "spirit-power" (*pneumatika* may well be the Corinthians' own designation, conceded in 1 Cor 14:12; Schulz 1976: 454–56) are expressions of the Spirit's activity, but he proceeds to set them within a larger framework of God's *charismata*, a broader term referring to all manifestations of God's favor, finding particular and concrete expression in service

of whatever kind. In so doing Paul has introduced a new set of criteria for evaluating spiritual gifts by setting them in an order of precedence and importance, and thereby he has corrected the Corinthians' value judgments.

**1. The Service of the Church.** "Spiritual gifts" (*charismata*) in the wider application which Paul prefers relates to the service of the Church and is set within the apostolic teaching of Christian calling. The chief criterion is not the display of some supernatural or paranormal activity but the use that is made of it. "The criterion of a genuine charisma lies not in the mere fact of its existence but in the use to which it is put" (Käsemann 1964: 71). Specifically, this implies that Christians recognize the *charisma* as the Lord's gift-in-grace, and employ it as a way of expressing obedience to his call and requirement. Seen in this total way, many facets of life are brought under the rubric of *charismata* (Rom 12:6). The Pauline categories are (a) kerygmatic, the means by which the Gospel is proclaimed and applied by apostles, prophets, evangelists, and teachers (1 Cor 12:28–31; 14:3–5, 29–32; cf. Eph 4:11; 1 Tim 4:14; 2 Tim 1:6 for later development into "office"); (b) diaconal, gifts of service (1 Cor 12:5: "acts of service") involving deacons, deaconesses, administrators, those who give assistance to others in distress, including almsgiving, hospitality, and care of the sick and widows (Rom 12:7–8, 13; 1 Cor 12:28; Phil 1:1; cf. 1 Tim 5:9–10, 16–17; Titus 1:8); (c) miracle-working and healing ministries covered by the term in 1 Cor 12:6 which takes in the role of those who practice healing with prayer, laying on of hands and exorcism (1 Cor 12:10, 28); (d) the endurance of suffering for the Gospel's sake (2 Cor 1:5–7; 4:7–12; 12:9–10; Col 1:24–25; and especially Phil 1:27–30 where both apostle and congregation are "gifted" [1:29] with the privilege of suffering on behalf of Christ); (e) special vocational giftedness which includes such general references as Rom 1:11 ("some spiritual gift"); 1 Cor 1:7 ("you do not lack and *charisma*") and more particular callings like that of celibacy or self-restraint within the married state (1 Cor 7:7). The fact that Paul can regard such abstinence from sex as a concession and as applicable for only a limited time (7:5) suggests that the *charisma* of continence within marriage is a special case and may not be available to those who practice normal marital relations. His eye is possibly on an unusual Corinthian practice of sexless marriage (1 Cor 7:36–38).

It is evident that Paul as himself an apostle of Christ (Rom 1:1; 2 Cor 1:1) appealed to the witness of his "mighty works" (Rom 15:17–20) as tokens of divine power which accompanied his ministry, though he is careful to hedge about these statements by never appealing to such signs as validating proofs and by qualifying his assertions with his stress on "Christ working through him" (Rom 15:18). In a polemical passage (2 Cor 12:11–13), he insists that what counted for him was fidelity to his apostolic call, not the "signs, wonders and miracles" which his opponents evidently laid claim to (2 Cor 12:12). Also to be considered here is Paul's own ecstatic or transcendental experience as "a man in Christ" (2 Cor 12:1–10). He was the recipient of "visions and revelations" and heard heavenly messages (12:4) which may be the same as what he elsewhere (1 Cor 2:9–10) refers to an unmediated contact with God by the Spirit. The "journey to paradise" motif (2 Cor 12:2) is

based on Jewish apocalyptic idiom (Revelation 4) which is mentioned in connection with favored Jewish heroes and holy people who were raptured to God's presence. In view of the special nature of this "mystical" experience for Paul—he summoned it from the past over fourteen years ago (2 Cor 12:2)—it is significant that he never built his case for apostolic authority on what was seen and heard, and has set the experience within a double frame (2 Cor 11:30–33 the flight from Damascus as he was lowered in a basket; 2 Cor 12:7–10 the dialogue with the Lord who did not grant his request for the removal of his thorn in the flesh) that emphasizes vividly his frailty and continuing weaknesses. His critics at Corinth charge him with being deficient in spiritual ecstasies (2 Cor 10:10; 13:9). In reply Paul makes it clear that such dissociative experiences as he has known (2 Cor 5:13; 1 Cor 14:18) have not brought him nearer to God than at other times. They have been marked by an intimacy too precious to reveal, and too exceptional for any case of apostolic validation to be built upon them. Paul gloried in his weakness. The failure on the part of the Corinthians to appreciate this led to serious consequence. As Lang (1986: 18) puts it, overrating the *charismata* misled the Corinthians into devaluing the cross of Christ.

**2. The Assembly.** Because of problems within the Corinthian community and in particular its services of worship Paul devotes considerable attention to spiritual gifts in a liturgical setting. In the section of 1 Cor 7:7 "each person has his *charisma* from God," Paul elaborates the rule expressed as to each person his or her own gift. Each person in the assembly is gifted with some *charisma*, though not all have the same gift. The setting here is seen in the dialogue-analogy of 12:14–21 (reflecting the unity of the human anatomy): the foot has no reason to object that because it is not the hand it is not part of the body; conversely the eye must not say to the hand, I have no need of you. God has designed the ecclesial body to be one, yet composed of many members (12:12, 20, 27). He has fashioned *charismata* to express unity-in-diversity, with no division within the body (12:25: *schisma* looks back to 1 Cor 1:10), no rivalry between the parts since all the members share a common life-in-the-Spirit (12:12, 13), and no justifiable sense of superiority since the stronger parts (those gifted with a more active faith based on "knowledge" and "wisdom," 12:8–9) have need of the weaker elements in the Church (those possessing only limited endowment). In fact, there should be a mutual interchange (12:25) and a complementarity based on the way all the *charismata* cohere to fit with the divine scheme (12:18).

The fact that the Spirit imparts *charismata* "as he determines" (12:11) and each gifted part of the ecclesial body is to occupy a place "as God chooses" (12:18) sounds the death knell to inordinate pride on the one side, and low self-esteem on the other. All the members have a special *charisma*, but one does not have all the *charismata*; and some *charismata* are not universally available (12:29–30; these rhetorical questions expect the answer no).

The second criterion laid down by Paul is that all the *charismata* serve one purpose, stated as the "good of all" (2 Cor 12:7). This axiom will be elaborated in chap. 14 where the apostolic directive is that all the gifts on display in

congregational assembly should be directed to the up-building (*oikodomē*) of the entire company (14:5, 12, 26). In the list of nine gifts in 12:4–10 a representative number are itemized, probably in descending order of Pauline evaluation. There are three groups, each with a distinctive aim: (a) pedagogical ministries in the utterances of "wisdom" and "knowledge" twin capacities highly prized at Corinth and needing to be brought under the control of the Spirit lest they should minister to pride and speculation (1 Cor 8:1), and reliance on a private gnosis which benefits only the possessor. "Wisdom of this age" (1 Cor 1:20–25; 2:5–6; 3:19) does not serve to build up the congregation; but wisdom as a God-given insight into divine mysteries (2:7: cf. Eph 3:10–11; Col 1:9) does; (b) supernatural powers exemplified in deeds of faith, miracle-working abilities, and effective healings (12:9, 28, 30) suggest the presence of divine activity in relation to human weakness, sickness, and distress, though the Paul of Acts (Acts 14:8–10; 16:16–18; 19:11–12; 28:3–6, 7–10) is given a reputation as a wonderworker that is only marginally represented in the epistles (by contrast 2 Cor 12:1–10; cf. 2 Tim 4:20). (c) gifts of communication are expressed in the following terms—prophecy linked to the ability to evaluate the inspired utterances (of the prophets? 1 Cor 14:29–31); glossolalic speech, often simply called "tongues" (1 Cor 12:10, 28; 12:30; 13:1, 8; 14:5–6, 22–23, 39) or a "tongue" (14:2, 4, 9, 13–14, 26–27), best understood as an ecstatic cry or type of prayer-speech thought to articulate the language of heaven (*T. Job* 48–50) as a vehicle of praise and communication. So, because Paul will have the "tongue" express meaning for others and not simply serve to build up the glossolalic (14:2, 4a), he insists on the need for "interpretation of tongues" (1 Cor 12:10; 14:26), and the presence of an "interpreter" (14:28) who will exercise this *charisma* (12:30; 14:5, 13, 27). Only thus—in Paul's pastoral counsel—will the church be edified and worship be brought under the aegis of the rational in tandem with the affective. See 1 Cor 14:6 for Paul's preference for the more noetic gifts of "revelation" (uncovering the will of God for his people perhaps as directives and commands); "knowledge" of God's salvific plan in all its ramifications for the Church; "prophecy," inspired utterances which, unlike glossolalia, are marked by intelligibility and comprehensibility in the minds of the hearers; and "teaching," perhaps scriptural expositions based on the OT. Glossolalia, on the other hand, is to be understood as "speaking" and "praying" when the mind is inactive (14:14). For Paul this is less desirable on the ground that the congregation is not built up by this exercise (14:11); rather the individual glossolalic serves only to build up himself (14:4). Prophecy, to the contrary, involves the interplay of spirit and mind, and aims to edify the hearers, whether one's fellow-believers (14:3, 16–17) or outsiders (14:24–26).

This last reference introduces yet another criterion for the right and profitable use of *charismata* in the Pauline churches. It may be stated as a concern for good order and seemly behavior among the worshippers not only because other types of corporate practice—such as the confusion of all speaking in a strange tongue (14:11) or all speaking together—lead to disarray (1 Cor 14:17–28) but because Paul looks to the character of God as setting the

standard. He is not a God of disorder but of peace (harmony) (14:32), and any tendency that promotes the abandonment of control and produces the onset of uninhibited and unrestrained outpourings in glossolalic speech suggests that the worshippers are "possessed" by a demonic spirit (14:23). Thereby, they betray the nature of worship under the lordship of Christ (12:1-3). So the apostolic call is to permit glossolalia, with the necessary safeguards; to give priority to intelligible prophecy and revelation (14:30); and above all to promote good order and decorous conduct (14:40).

Another way of putting these three criteria—the unity to be safeguarded amid competing interests at Corinth, the concern for upbuilding of the entire company at worship, and the restraints needed to retain a semblance of good order—is to make love the indispensable accompaniment of whatever *charismata* are found in the Church. "Love" (*agapē*) is not one of the *charismata*; it is rather the Spirit's fruit (Gal 5:22). As such, it is the test of all the *charismata*, for if love is absent, all the gifts, however valued and heroic they may appear, lose their value (1 Cor 13:1-3). Only love, best defined as a determination to seek and apply the interests of God in other people, can act to ensure that the true meaning of a spiritual gift may be properly achieved. That implies that its function is controlled and channeled along those lines which promote the intention of God whose nature for Paul as for the other NT writers is most adequately described as love. Even gifts that Paul otherwise would applaud, such as "knowledge" and "prophecy," have their true function within a relationship of love; and even so they are limited to this age, in Paul's eschatology (1 Cor 13:8-13). Love which is as eternal as God's nature endures.

RALPH P. MARTIN

**GIHON** (PLACE) [Heb *gihôn*]. The name of two sources of water; though it is possible that they are not independent of one another.

1. According to three connected communications, an important spring in Jerusalem, presented as the place where Solomon is said to have been anointed king (cf. 1 Kgs 1:33, 38, 45). The communication about a sacred tent from which the priest Zadok took the horn of oil for anointing (1:39) leads to the suggestion that the sacred ark had its place at the spring. There is no reason, however, to identify the tent for the ark pitched by David (2 Sam 6:17) with an institute outside the walls and never qualified as a

sanctuary elsewhere. So the historical value may be doubtful. If instead of Gihon a better-known sanctuary (such as Gibeon) had been named here originally (Görg 1967: 129, but cf. Schmitt 1972: 191-93) or if the communication about the tent is based on a metaphorical use of the term *ōhel* meaning a temple building in Jerusalem (Rupprecht 1977: 84) or on a literary interpolation (Langlamet 1981: 88), is open to further discussions. According to 2 Chr 32:30, the spring had been blocked by king Hezekiah, who channeled the water down to the W side of the city. This information would be sustained if the so-called Inscription of Siloam (now in Istanbul) would refer to Hezekiah's activity giving a report about the last phase of the work possibly connected with the defense system against the Assyrians (but see Shiloh 1984: 23 who claims for a difference between an earlier "Siloam Channel" and "Hezekiah's Tunnel").

King Manasseh is said to have rebuilt an outer wall W of the spring (2 Chr 33:14), a communication without parallel within the report about Manasseh's reign in 2 Kings 21, and therefore of limited historical value.

Archaeological work at the spring of Gihon, now identical with 'En Sittî Maryam (Arabic 'En Umm ed-Dereğ), leads to identifying the spring as the "basic factor in the existence of the earliest Jerusalem" (Kenyon 1974: 39). The spring itself, "quite different in hydrological character from the ordinary sources on other sites, which generally are fed by regular sources or by the water table" (Shiloh 1984: 23), had been accessible by a shaft from the higher slope of the hill. This shaft, first identified by Warren in 1867 and reexamined by Vincent in 1911, has been regarded by Kenyon as the earliest access used for military purposes already by the pre-Israelite inhabitants of Jerusalem. According to Shiloh (1984: 24) Warren's Shaft belongs together with the "Siloam Tunnel" to a water system from the 10th-9th century B.C. connecting "the northern part of the city of David (and perhaps even its citadel) with the water source." (The entrance area excavated in 1984 under the direction of Shiloh is now part of the "City of David Archaeological Garden.")

2. According to Gen 2:13 the second mentioned river of the four headwaters separated from the main stream watering the paradise of Eden. The river is said to wind through the entire land of Cush. For identifying the water many attempts had been made (see Westermann *Genesis* BKAT, 297f.) The equation with the Nile River sustained by the African Cush (Ethiopia) and by translation in Jer 2:18 (LXX) lacks philological evidence, as is the attempt to identify the Gihon with the Nubian (Sudanese) part of the Nile. Further proposals regarding the later named Tigris and Euphrates point to a Mesopotamian river running to one of these main streams (cf. Lemaire 1981); but there is no name comparable with Gihon under the well-documented Mesopotamian geographical names. So should it be the best solution to identify the Gihon with the above-cited watering as the most important river for Jerusalem, and Zion itself as the center of the world (cf. Eising *TWAT* 1: 1010). Moreover, if the Pishon should be the Nile in mythical connection with the extending primordial ocean (cf. Görg 1987: 11-13), Gihon may be the next important river from the view of a Judean author being well acquainted with Egyptian ideas of primordial waterings. The

so-called geography of the paradise offers a kind of cartography, setting Jerusalem into the midst of the world and regarding Cush as a country in the S encircled by the river, possibly an allusion to the special contact of Jerusalem under Hezekiah to the Egyptian neighbor dominated by the 25th (Ethiopian) Dynasty.

This view may be strengthened by considering the prophetic vision of a spring gushing forth from under the Temple (cf. Ezekiel 47) as a utopic description of a river growing up to a stream of universal relevance. Such an aspect may correspond to the metaphorical reception of the Gihon together with the other rivers of paradise and the Jordan River by Sirach (24:23–33) in order to praise the growing of the Torah (cf. Eising *TWAT* 1: 1011).

M. GÖRG

**GIL'ADI, KEFAR.** See KEFAR GIL'ADI.

**GILALAI** (PERSON) [Heb *gilālay*]. The son of a priest who participated in the Great Procession as one of the musicians during the dedication of the Wall of Jerusalem (Neh 12:36). He lived during the time of Ezra and Nehemiah in the 5th century B.C.

GARY C. AUGUSTIN

**GILBOA, MOUNT** (PLACE) [Heb *gilbōa'*]. One of a pair of mountains overlooking the Valley of Jezreel. The other is the Hill of Moreh. It was in this area that Saul fought the Philistines in the battle in which he lost his life. (1 Sam 31:1, 8; 1 Chr 10:1, 8). The Philistines gathered for battle at Shunem (M.R. 181223 modern Sölem on the S slope of Mount Gilboa [McCarter *1 Samuel* AB, 420]), while the Israelites mustered at Gilboa (1 Sam 28:4, the latter perhaps with reference to a town rather than the mountain as a whole since the MT lacks the full name "Mount Gilboa" at this point, cf. 1 Sam 31:1; so Reed *IDB* 2: 396). Mount Gilboa is modern Jebel Fuqu'ah, in the hills to the W of the Jordan valley midway between the Sea of Galilee and the Dead Sea.

The difficulty in the account of the battle of Gilboa (1 Samuel 28–31 and its aftermath in 2 Samuel 1) has to do with the order of the narrative. As many commentators

have noted (Driver *Samuel* ICC, 213–14; Hertzberg *1 and 2 Samuel* OTL, 217; McCarter *1 Samuel* AB, 422–23), 1 Samuel 28, which begins the account of the battle, appears to be interrupted by chaps. 29–30, which narrate David's rescue of Ziklag and his defeat of the Amalekites. In 1 Sam 29:1 the Philistines are said to be gathering at Aphek, which is N of the gathering-place (Shunem) mentioned in 1 Sam 28:4 and so logically prior to Shunem according to what would be their normal line of march (Driver *Samuel* ICC, 213–14; cf. Koizumi 1976: 63–64 who also reads the order of events this way). 1 Samuel 28 (the story of Saul and the witch of Endor on the evening of the battle of Gilboa) flows more naturally into 1 Samuel 31 (the account of the battle itself). Similarly, 1 Samuel 27 (David in the service of the Philistine Achish) flows naturally into 1 Samuel 29–30 (David released from Achish's service and the rescue of Ziklag). It is likely then that in terms of the order of events, 1 Samuel 29–30 are displaced.

Additionally, Samuel's speech (as a ghost) in 1 Sam 28:17–18 reminds the reader of Saul's failure to destroy the defeated Amalekites (1 Samuel 15), an episode which the prophetic editor of the books of Samuel understands as leading to YHWH's rejection of Saul. This material is likely an interjection which prepares the way for the story of David's defeat of the Amalekites at Ziklag (McCarter *1 Samuel* AB, 422–23).

The other references to Mount Gilboa refer back to the battle in which Saul dies (i.e., 2 Sam 1:6, 21; 2 Sam 21:12).

JEFFRIES M. HAMILTON

**GILEAD** (PERSON) [Heb *gil'ād*]. Three individuals in the Hebrew Bible bear this name.

1. The son of Machir and grandson of Manasseh (Num 26:29; 36:1; 2 Chr 2:21, 23). His six sons, whose descendants became significant tribal clans, were Iezer (Abiezer in Josh 17:2), Helek, Asriel, Shechem, Shemida, and Hephher (Num 26:30–32; Josh 17:2). The Manassite genealogy in 1 Chr 7:14–19 also names Gilead as the son of Machir but presents the other family relations in a way that is substantially different from that in Numbers 26. The text of 1 Chronicles 7 is corrupt at this point, and a number of different proposals have been made to correct it (Albright 1925: 28; Rudolph *Chronikbücher* HAT, 68–71; Braun *1 Chronicles* WBC, 110–12).

Elsewhere, Gilead's name is used to designate his descendants or their land as a whole (cf. Judg 5:17; 10:18; 1 Sam 13:7; 2 Sam 2:9), and it is often difficult to know which is intended. According to the folk etymology in Gen 31:47–48, "Gilead" derives from "Galeed" (*gal'ēd*, "mound of witness") and originally designated the pile of stones that commemorated Jacob's covenant with Laban (Gen 31:43–50). A more recent suggestion, though, proposes that the name "Gilead" originally meant "rugged country" (cf. Ar *jalid*, "rough," "rugged"), describing the terrain of Gilead in contrast to Bashan (Cohen *IDB* 2: 397).

2. The father of Jephthah, who lived in the land of Gilead and begot his famous son by a prostitute (Judg 11:1–2). Gilead had other sons by his wife, and these sons

expelled Jephthah from the family home in order to keep the inheritance for themselves.

3. A Gadite mentioned only in 1 Chr 5:14. He was an ancestor of Abihail, the father of the eleven (or ten; see SHAPHAT) sons listed in 1 Chr 5:12–13. Neither Gilead nor the others named in the Chronicler's genealogy for Gad (1 Chr 5:11–17) appear in other lists of Gadites (Gen 46:16; Num 26:15–18; 1 Chr 12:9–16—Eng 12:8–15) or elsewhere in the Bible.

M. PATRICK GRAHAM

**GILEAD** (PLACE) [Heb *gil'ād*]. GILEADITE. An area on the E side of the Jordan River that became part of the Israelite inheritance.

### A. Etymology and Usage

The name *gil'ād* is difficult to explain both as regards etymology and original usage. It is established in the OT forty-seven times as indeterminate and fifty-three times as determinate. The OT derivation of the word is found in Gen 31:48, from *gal'ed* "witness cairn," reminiscent of popular etymology. The name survives in Arabic in the form *gel'ad*. It has been considered that the word incorporates a consonantal dissimilation. The root should be *g'd*, meaning "curly (of hair), difficult (of terrain)." Since there are parallel examples of naming an area after the nature of the ground and Gilead was also forested (2 Sam cf. Jer 22:6), the meanings correspond to the structure of the landscape E of the Jordan. The word is both masculine and feminine. The indeterminate form has mostly the character of a *nomen gentile* or *nomen tribus* instead of the appellative designation of an area, but this is not always the case (cf. 1 Chr 2:21, 23; 7:14; and Josh 17:1).

Outside the OT the word is found in Ugaritic, Text 170 as a *nomen loci*, in Text 301 as a personal name, and in a royal Assyrian inscription from Nimrud, K 2649/III R 10, 2 "the town of *ga-al-'a-a-(za)*," possibly identical with Ramoth-gilead.

Whatever usage the name Gilead may have in the OT—as *heros eponymos* of a tribe (Num 26:29; Judg 11:1) to whom Machir was the father (Josh 17:1; 1 Chr 2:21, 23; 7:14), as the designation of a "tribe" (Judg 5:17; Hos 6:8), or as the name of a territory (Gen 37:25)—it is always connected with the region to the E of the Jordan. The inhabitants are often called Gileadites (Num 26:30; Judg 12:4–5).

### B. Geography

In its widest extent Gilead covers the area from the Arnon in the S to Bashan in the N. The N limit is very vaguely expressed in the OT. The Yarmuk is never mentioned. To the E, the area is bounded by the desert. The Jordan in the W has never played the role of a historical border but is more of ideological character (Josh 22:19). The Jordan has several fords and although the valley is very deep, on both sides of the Jordan is an easily traversable plain several kilometers wide extending N from the

Dead Sea. The Jordan River meanders from the Sea of Galilee (ca. 212 m below sea level) to the Dead Sea (ca. 394 m below sea level). The Jordan Valley is cut by numerous wadis which empty into the Jordan or the Dead Sea. The most outstanding wadis are Yarmuk, el-Jabes, Nahr ez-Zerqa, and the Jabbok in the N and wadis Kufrein, Wala, Mojib, and the Arnon in the S. Nahr ez-Zerqa is the main divider of Gilead and is regarded as the border of the Ammonites (Deut 3:16; Josh 12:2). N of this wadi, the landscape rises sharply to a height of nearly 1500 m forming the Ajlun mountains. The hill country S of the Jabbok is called Belqa and continues to the area just E of the Dead Sea with the Abarim summits including Mt. Nebo and Mt. Pisgah, which form the W limit of the plains of Moab (also named Mishor in the OT). A general description of the area is found in Deut 2:36–37. Sometimes the designation "half of Gilead" is used both of the area N of the Jabbok (Josh 12:5; 13:31) and S of the same cleft (Deut 3:12; Josh 12:2). This designation could have its origin in the topography or in the early history. Gilead together with Bashan is said to have been governed by two Amorite kings, Sihon in the S and Og in the N (Num 21; etc).

One topographical designation in the OT is *har gil'ād* (Cant 4:1) or *har haggil'ād* (Gen 31:21, 25; Deut 3:12; Judg 7:3) which refers to the mountain district of Gilead, otherwise *'ereš gil'ad* (five times) and *'ereš haggil'ad* (ten times), "the land of Gilead," are used. "The cities of Gilead" (mentioned in Num 32:3, 26; Deut 3:12; Josh 13:25; and Judg 12:7) refers to the cities of Reuben and Gad. Havvoth-jair is placed in N Gilead according to Num 32:41 and Judg 10:4 (cf. Deut 3:4). Very few city names occur in the N, but lists count several cities in the S (Num 32:3, 34–38; Josh 13:16–20; Isa 15–16). Most of the same names are also found on the Moabite stone.

One of the products which made Gilead famous and reappears in the book of Jeremiah (8:22; 46:11), was balm, a drug which was evidently exported to Egypt (Gen 37:25). According to Pliny (*HN* 12.117) balm was very rare and in the days of Alexander the Great only a spoonful of balm could be collected on a summer day. Vespasian took balm plants to Rome and Pompey boasts of carrying them in his triumph (Pliny *HN*, 12.111).

From the Dead Sea bitumen or asphalt was brought and used as insulation or packing material, e.g. in tombs (Tell es-Safidiyeh).

### C. History

Gilead is mentioned for the first time in Gen 31:23 in relation to Jacob's settlement with Laban in the mountains of Gilead. Ideologically it is not by mere accident that Jacob consents to a contract with Laban in this area. We are told about a treaty which tends to show Jacob as the dominant party. He succeeded in shaking off the Aramean yoke, would have another settlement with his brother Esau/Edom, and after his enigmatic wrestling at the ford of the Jabbok, the name Israel was given to him (Gen 32:29). Jacob, *heros eponymos* of the N kingdom, thus legitimated the area on the other side of the Jordan as Israelite property. When conquering Gilead, Moses had to defeat the two Amorite kings, Sihon and Og, who together governed all Gilead and Bashan (Deut 4:47–49). The tribes of Reuben and Gad asked for and got their inheritances in

the S, (cf. Num 32 and Josh 13) and the E branch of Manasseh settled in the N. The E Jordan Valley fell to Gad.

The history of Machir is enigmatic. He is named "the father of Gilead" (Num 26:29; Josh 17:1). Machir took Gilead (Num 32:39) and Moses gave him Gilead (Deut 3:15). Machir was certainly a Cisjordanian tribe (Judg 5:14) until he settled in the E. There are also other sub-clans as Jair and Nobah. Gilead as a tribal name is mentioned together with Reuben in Judg 5:17 and seems to represent the N part of the area. These tribes did not take part in the Cisjordanian war. There was marked dissension between the Israelite groups in the W and in the E. Ephraim's impatience over the statements of independence among the Gileadites under Jephthah (Judg 12:1-6), points to a W self-confidence of domination over Gilead. The ideological and tribal connection between E and W also involved the question of political power.

Saul built up his kingdom by winning loyalty in the E by rescuing Jabesh-gilead (1 Sam 11) when the city was besieged by the Ammonites. And from Gilead he could then attack the Philistines in the W. After Saul's death, his son, Ishbaal, tried to create a center of power in Mahanaim to reconquer the Cisjordan (2 Sam 2). It failed as the history worked for David. When the latter had taken "the reins of the land" in the W (2 Sam 8:1), he established his hegemony over the area E of the Jordan, and through his victories over the Arameans and the Ammonites he got definite control of Gilead, where David himself had to retreat when his son Absalom revolted against him (2 Sam 15-18).

The reasons for the severe battles for sovereignty over Gilead were not only militarily strategic, but also commercially so. When David broke the power of the Philistines in Cisjordan and signed a treaty with Hiram of Tyre, he controlled the W trade route between Egypt and Damascus, the *Via Maris*, and by his take-over of Gilead he was in a position to control trade along the King's Highway (Numbers 21). The census which concludes 2 Samuel and which forms the epilogue to David's powerful reign includes the land E of the Jordan, which Israel had claimed since the period of the Conquest.

For Solomon, Gilead was a matter of domestic politics (1 Kgs 4:7-19) and three of his administrative districts covered Transjordan. The information on Solomon's building projects (1 Kgs 9:15-22) does not mention a single town in the E but there are indications that copper was refined in the Jordan Valley (1 Kgs 7:46).

After the division of Solomon's empire, Gilead in its widest aspect was joined to the N kingdom although Rehoboam was of Ammonite blood on his mother's side (1 Kgs 14:31). It is possible to discern in Jeroboam's activities a strategic tendency in the organization of the new N kingdom. He fortified Shechem and Tirzah in the W and Penuel in the area of the Jabbok. It may have been an ideological complement to Mahanaim in line with the revival of the Bethel cult (Gen 32:24-32). Shoshonq's invasion of Palestine (1 Kgs 14:25-26), yields in the Karnak inscription reference to at least four towns, Adama, Succoth(?), Penuel, and Mahanaim, which were pillaged in the E, on which the OT is silent.

During the divided kingdom, control of Gilead was an essential element in the policy of the N Israelite kings. But they had to fight the Arameans in the N, especially at

Ramoth-gilead and the Moabites in the S. The effort of the Omride kings to keep a strong hand on Gilead may be regarded in terms of economic policy. The state of tension between E and W which sometimes arose became the demise of King Jehu. He was killed by Shallum, the son of Jabesh, a Gileadite (2 Kgs 15:10). Israel's chances of freeing itself from the Arameans depended on Assyria and Adad-nirari III who finally crushed Aram, who had "threshed Gilead with threshing sledges of iron" (Amos 1:3).

Jehoash and Jeroboam II recovered all the region, but Israel's star began to wane during the later years of Jeroboam's reign and after him there was one palace revolution after another. Pekahiah was murdered by Pekah who was supported by the Gileadites (2 Kgs 15:25). Pekah also entered a coalition with Rezin of Damascus and according to 2 Kgs 16:6, a campaign materialized E of the Jordan in which the Arameans forced their way through Gilead as far S as Elath. Pekah was then overthrown by a pro-Assyrian phalanx led by Hoshea. Gilead became just an Assyrian province (Isa 8:23) and was conquered by Tiglath-pileser (2 Kgs 15:29). We do not know if Josiah had any special interest in Gilead. Ishmael, the murderer of Gedaliah, had support from the Ammonite king Baalis and he was possibly the last important usurper from the E (Jer 41).

In the OT, the history of Gilead is written from a Cisjordanian point of view. Since the tribes Reuben, Gad, and half-of-Manasseh (and with them related clans) are said to have settled there, the land of Gilead was regarded as a part of the land of Israel. Gad is mentioned in the Mesha Inscription, but in the so-called P ideology, Gilead is excluded and the river Jordan is regarded as frontier (Num 34:12; Ezek 47:18) and in Josh 22:19, Transjordan is considered unclean (cf. Num 32). There were three Levitical cities E of the Jordan (Deut 4:41-43). Psalms 60 and 108 speak of Gilead as belonging to God's patrimony and in the prophetic talk of restoration, Gilead is specially mentioned (Jer 50:19; Mic 7:14; Zech 10:10; Ob 19).

#### D. Archaeology

The warm climate of the Jordan Valley gave possibilities for very early civilizations and Jericho, together with Beidha, had communities more than 10,000 years ago. Archaeological surveys show that humans lived there from the beginning of the Old Stone Age around 450,000 years ago. Remains of a Neolithic culture are also found in the Wadi Yarmuk. Excavations have been carried out since 1930 at Tuleilat el-Ghassul where remains from an outstanding Chalcolithic culture have been found. Houses were decorated with painted frescoes in polychrome. Some of the hundreds of dolmens spread over the area seem to have been erected in this period. The EB is represented, and at Bab ed-Dhra in the Lisan a very extensive cemetery from this period has been found. No major MB sites have been excavated so far, but the typical fortification of the period, the *glacis*, has been found. The theory that Transjordan was a nomadic area between 1900-1300 B.C. can no longer be accepted. Surveys and excavations show that the area continued to flourish during the LB (1550-1200 B.C.). Sites as Tabaqat Fahil (Pella), Deir Alla, Tell el-Mazar, Tell es-Safidiyeh, Madaba, Jalul, etc. and cave tombs in the

Baq'ah Valley show a large wealth of objects and pottery typical for this period. The Square Temple at the Amman airport is dated to the LB as is possibly the building found at El Mabrak. The first written records appear now at Tell Deir Alla and at Balu'a.

During the Iron Age (1200–586 B.C.), Gilead was governed sometimes by the Israelites, sometimes by the Arameans, and sometimes by the Ammonites and the Moabites. Architectural remains from several sites indicate that the Iron Age cultures E of the Jordan attained a high degree of prosperity. There were large cities, well planned with magnificent water installations. Finds of glass beads of very high iron content (50 percent) in burial caves in the Baq'ah Valley suggest an iron industry in the area already in Iron Age IA (ca. 1200–1050 B.C.). There are iron mines in the Ajlun area. Numerous megalithic forts were positioned along the trade routes. Several inscriptions and ostraca provide many interesting details of the history. The Moabite Stone, found in 1868 at Dhiban, gives the E opinion of the Israelite hegemony in the area N of the Arnon in the 9th century B.C. At Tell Deir Alla was found (in 1967) a remarkable inscription on cement. On paleographic grounds, it is dated to the 8th century B.C. and tells about the nightly visions of "the seer of the gods, Balaam, Beor's son" (cf. Num 22–24).

At Tell Mazar in the Jordan Valley ostraca have been found, which date to the 7th–6th century B.C. Hebrew, and especially Ammonite, influences are evident in the texts (cf. the inscriptions from Tell Siran, the Amman Citadel, and the Amman Theatre). From the Persian period (ca. 539–332 B.C.), little is known except that citadels were built along the routes (Tell es-Sa'idiyeh). The Hellenistic period (ca. 332–63 B.C.) offers especially one place of biblical interest, namely Araq el-Emir situated W of Amman. There the Tobiad family resided until Hyrcanos was overwhelmed by the Seleucids in ca. 175 B.C. A great Qasr surrounded by an artificial moat was built, and in a short inscription on stone the square letters of the Hebrew alphabet appear for the first time (ca. 190 B.C.).

**GILEAD, BALM OF.** See BALM.

**GILGAL** (PLACE) [Heb *gilgāl*]. A common place name in the OT. In all but two cases (Josh 5:9; Josh 12:23), it is prefixed with the definite article (*haggilgāl*), or the definite article and preposition (*baggilgāl*, as in Josh 4:19). The name appears to mean "circle (of stones)," apparently based on a duplication of the root *gll* "to roll" or "roll away." The MT refers to at least three, and perhaps as many as five, distinct locations by this name.

1. A place near Jericho where the Israelites established their first encampment after crossing the Jordan River (Josh 4:19). As a memorial of passing over the Jordan on dry land, the Israelites set up at Gilgal twelve stones taken out of the dry river bed (Josh 4:20). It was here that the generation born during the wilderness wanderings was circumcised (Josh 5:2–9). The connection of the name Gilgal with the verb form "I have rolled away" (*gallōti*) is perhaps better seen as a word play rather than a folk etymology. The Israelites celebrated their first Passover in the promised land at Gilgal (Josh 5:10–11), at the conclusion of which the provision of manna ceased (Josh 5:12). During their encampment at Gilgal, the Israelites were approached by emissaries of Gibeon, who "tricked" them into agreeing to a nonaggression pact (Josh 9:6). In fulfillment of this agreement, the Israelites used Gilgal as a base for their attack on the anti-Gibeonite coalition (Josh 10:6–7, 9, 15), and it was to Gilgal that they returned after their victorious sweep through S Canaan (Josh 10:43). It was also here that Joshua granted Hebron to Caleb as a reward for faithfulness during the wilderness wanderings (Josh 14:6). The allotment of tribal territories recorded in Joshua 15–19 is also implicitly associated with Gilgal. Judg 2:1 records the movement of the angel of the Lord from Gilgal, where he had previously appeared to Joshua (Josh 5:13–15), to BOCHIM, apparently signaling a downturn in Gilgal's significance. It is possible that this downturn resulted from the capture of Gilgal by the Moabites, for it is in the vicinity of Gilgal (Judg 3:19) that EHUD assassinates Eglon, king of Moab.

In the time of Samuel, Gilgal appears to have undergone a renaissance, becoming an important cultic center. It was one of the three places where Samuel sat during his yearly judicial cycle (1 Sam 7:16). Following their initial encounter, Samuel asked SAUL to await him at Gilgal (1 Sam 10:8). It is here that Samuel makes Saul king (1 Sam 11:14–15), and here where Saul rallied the Israelites after Jonathan's victory over the Philistine garrison at GEBA (1 Sam 13:3–4). Impatient because Samuel was late, Saul

presumptuously made burnt offerings at Gilgal, resulting in a stinging rebuke from Samuel (1 Sam 14:8–15). That such offerings were considered appropriate at Gilgal under certain circumstances is demonstrated by the reference to peace offerings performed when Saul was made king (1 Sam 11:15). After his victory over the Amalekites, Saul met Samuel at Gilgal (1 Sam 15:12–13), where his failure to destroy the flocks of the Amalekites called forth another rebuke from Samuel (1 Sam 15:22–30), resulting in Saul's rejection as king. Saul's unacceptable excuse, that he was saving the flocks for sacrifice at Gilgal, is further indication of the cultic significance of the site at this time. A few years later, the men of Judah gathered at Gilgal to greet David on his return from exile following the death of Absalom (2 Sam 19:15).

Gilgal fades into obscurity until the 8th century, when in the thought and words of Amos and Hosea it becomes a symbol of apostasy. In the book of Amos, Gilgal appears in parallel with Bethel as a symbol of transgression and illegitimate sacrifice (Amos 4:4), and the people are encouraged to seek Yahweh instead of Bethel and Gilgal (Amos 5:5). Hosea warns the sons of Ephraim against entering into Gilgal (Hos 4:15), tells them that they have been rejected because of the evil they have done in Gilgal (Hos 9:15), and informs them that sacrifices in Gilgal are useless (Hos 12:11). Only Micah presents a positive image of Gilgal when, as part of Yahweh's legal case against his people because of their violation of the covenant, he asks them to "remember what happened from Shittim to Gilgal" (Mic 6:5).

Some scholars (e.g., Kraus 1951) have argued that the description in Joshua 3–6 of the events surrounding the crossing of the river Jordan reflect an annual cultic celebration in which these events were reenacted. This is a provocative, but also highly speculative, theory. It is difficult to believe that such a celebration would have been entirely ignored in other portions of the OT, especially if it were associated with one of the other major feasts of the cultic calendar.

The only OT clue to the exact location of ancient Gilgal occurs in Josh 4:19, where it is located "on the east border of Jericho," meaning, of course, the territory of Jericho and not the city itself. Although Tell en-Nitla, about 3.5 km E of Jericho, seems to provide the best fit for this description, excavations have yielded no evidence for occupation before the Byzantine period (Muilenberg 1955: 19–20). Two more promising candidates are to be found in the vicinity of Khirbet Mefjir (M.R. 193143), about 3 km NE of Jericho. Archaeological soundings at one of these sites, a little N of Khirbet el-Mefjir, yielded characteristic Iron Age pottery (Muilenberg 1955), while work at the other site, slightly W of Khirbet el-Mefjir, left the question unanswered (Bennett 1972; Landes 1975). Although it seems quite possible that ancient Gilgal is to be found somewhere nearby, its exact location remains enigmatic.

2. A location in the S hill country of Samaria, near Bethel. It was here that Elijah and Elisha began their final journey to Transjordan (2 Kgs 2:1). Although some have identified this place with Gilgal near Jericho, the context clearly refers to a location from which one "went down" to Bethel (2 Kgs 2:2). This seems to indicate a place higher

in altitude and perhaps to the N of Bethel. It has most commonly been identified with modern Jiljulieh (Muilenberg *IDB* 2: 398), which occupies the summit of a hill approximately 12 km N of Bethel (M.R. 171159). Despite the clear reflection of the ancient name, it is not yet known whether the site was occupied during the Iron Age. It is possible that the miracle in which Elisha purified a bowl of accidentally poisoned pottage (2 Kgs 4:38–41) is to be associated with this hill country Gilgal, although it could just as well be connected with Gilgal near Jericho.

3. A station on the N border of the tribal allotment of Judah (Josh 15:7). Alt (1953) has persuasively argued that the border list of Joshua 15 is derived from an ancient legal document delineating the territorial claims of the tribes during the period of the Judges. In the parallel passage (Josh 18:17) describing the S border of Benjamin, the name Geliloth appears in place of Gilgal. Given the fact that both words are derived from the same root (*gll*), these are obviously variants referring to the same border station. There are no objective criteria that allow us to choose one variant over the other. Although some scholars have sought to identify this border point with Gilgal near Jericho, the context clearly indicates a location much closer to the ascent of Adummim, convincingly identified with a ridge approximately half-way on the road between Jerusalem and Jericho whose red color is reflected in its modern Arabic name, Talat ed-Damm (Boling and Wright *Joshua* AB, 367–68). The nearby ruins at Khan el-Ahmar (M.R. 181133), traditional location of the Inn of the Good Samaritan, have often been identified with the ancient border station. However, recent archaeological survey has produced no evidence of Iron Age occupation at Khan el-Ahmar, leading to a suggestion to identify ancient Gilgal/Geliloth with Araq ed-Deir (M.R. 180133), an area of ruins approximately 1.5 km W of Khan el-Ahmar where some indication of Iron Age occupation has been found (Boling and Wright *Joshua* AB, 367).

4. In the MT, the list of kings defeated by Joshua includes reference to a "king of Gooim at Gilgal" (Josh 12:23). The RSV, following the LXX, reads Galilee in place of Gilgal. This suggests a possible identification with the Galilean site of Haroseth-ha-goiim mentioned as the home of Sisera in Judg 4:2. However, if we prefer to follow the MT, then we must assume the existence of a Canaanite city by the name of Gilgal. Unfortunately, clues to its location are minimal. If we assume that the list of defeated kings proceeds in geographical order, which is not entirely untenable, the king of Gilgal's appearance between Dor and Tirzah suggests a location somewhere on the E edge of Sharon Plain. If this is acceptable, then the ancient name may well be preserved in the modern town of Jiljuliyeh (*GP*, 327), approximately 5 km N of Aphek (M.R. 145173).

5. The reference to Gilgal in Deut 11:30 remains enigmatic. The preceding verse gives the distinct impression that reference is being made to a location somewhere in the vicinity of Mount Ebal and Mount Gerazim, that is, near ancient Shechem. This is further strengthened by the reference to the Oak of Moreh, which Gen 12:6 clearly locates at Shechem. Thus, it seems that an as yet unidentified location somewhere in the vicinity of Shechem also bore the name Gilgal. Perhaps this is the same Gilgal as that known to Elijah and Elisha (see #2 above). However,

many scholars feel that the overall context of this verse, referring as it does to entrance into the promised land, requires that Gilgal near Jericho (#1 above) be the point of reference. One provocative idea relates these verses in Deuteronomy to a rabbinic tradition suggesting that the Israelites utilized artificial heaps of stone as replicas of Ebal and Gerazim as part of a cultic celebration at the more famous Gilgal (Brownlee *ISBE* 2: 471).

WADE R. KOTTER

**GILGAL (PREHISTORIC SITES).** Six prehistoric sites were uncovered in 1973–74 on a low ridge and in a flat valley nearby, which were formed by the lisan bed in the lower Jordan Valley about 12 km N of Jericho. This ridge stands on the E part of the Salabiya Valley and is 220 m below sea level. Three sites were found on the ridge: Gilgal I (Pre-Pottery Neolithic A), and Gilgal II and VI (attributed to the Natufian Culture). In the valley are sites III and IV which are PPNA and site V, also attributed to the Natufian. In the past they may have been one unit while in a later period erosion activity cut the ridge and separated most of the sites by gullies.

This entire area lies between the Irano-Turanian and the Saudi Arabia plant belt with around 150 mm of rain, very mild winters and very hot summers. Only in Natufian times did humans arrive in this area, when the salty lisan lake which covered most of the Jordan Valley dried and a sweet water spring was exposed. Traces of a large deep swamp were also left on the W side of the Gilgal ridge. The PPNA people followed the Natufian people in this area, making the span of human occupation in this area ca. 9000–7600 B.C.E. Beyond this period, very little is known about the exploitation of the area. The water sources probably ran out, and it has remained barren and neglected almost until modern times.

A section has been dug in most of the sites mentioned, but only in Gilgal I has systematic excavation continued since 1974. The site is about 3–4 dunams and is located on the ridge and its W slope. On the surface, traces of stone walls of about 15 oval structures were seen, some of which have been examined. Although very close to the surface, the house floors were still very rich in finds. On most of the house floors which were white, a flat stone with cup-holes was found, sometimes along with a grinding stone. The arrowheads were of El Khiam points type with some variations; there also were long sickle blades, borers and a few axes, all made from flint. Polished axes were

made of limestone and basalt and there were also upper grinding stones and some polishers from basalt.

In the heart of the site, almost on top of the ridge, a wide section was dug and two major levels have been identified. Level 1, (the upper one) has lighter soil material, similar to mudbrick, and the lower Level 2, has walls of dark grayish soil. The lowest house uncovered (No. 11) is ovoid, its daub walls remain to a height of 50 cms. The house floor was laid on a very compact pebble foundation; similar pebbles were seen on sites III and IV. This house contained large quantities of carbonized seeds of oats and barley and a handful of acorns and pistachios, which were probably stored in small containers. In a different corner of the same house some very significant objects were found, such as three human figurines made of clay (perhaps burnt), and a bird figurine carved from limestone, as well as large pieces of asphalt that had coated baskets, which still bore the basketry and showed quite high quality craftsmanship. Another human figurine carved from limestone and carrying signs of a skirt was found on a floor of building No. 10. The combination of the store of seeds and the above-mentioned objects indicates a new symbolic thought and behavior of the people of that time.

The economy of the people was based on gathering wild plants and hunting, mainly birds, fowl, crabs and gazelles. The carbon dating taken from the seeds yielded dates ranging from 7900–7800 B.C.E.

The rich finds in the Jordan Valley sites correspond to the specific environment and location of this area: the spring environment which allowed special exploitation, the relatively short distance to the Dead Sea, a source of asphalt, which was so frequently used by these people. The clayish soil was conducive to varied usages—for use in bricks, and later on for pottery.

TAMAR NOY

**GILGAMESH EPIC.** A masterpiece of ANE literature, the Gilgamesh Epic (GE) is composed in Akkadian. It features the adventures of Gilgamesh, a king said to rule the S Mesopotamian city of Uruk around 2600 B.C.E. Since Gilgamesh has left us no contemporaneous monuments, scholars debate whether he really existed. Gilgamesh's exploits in the GE, however, are mostly beyond historical evaluation. In other traditions and in omen literature, Gilgamesh is invoked as a mighty builder, but also as an infernal deity.

- A. Sources  
 B. Versions

## C. Contents of Two Versions

## D. Gilgamesh and Biblical Studies

## A. Sources

The GE is a long narrative with multiple episodes, allocated to at least 10, but no more than 12 tablets, each averaging about 300 lines (an afternoon's listening). One native tradition simply refers to the series by its opening line, "He who saw all." Sources for the epic's various episodes may have circulated in Sumerian as early as the Ur III Dynasty (2100–2000 B.C.E.). Written or copied as much as half a millennium after the fall of Ur, these narratives may well be the products of learned Semitic scribes. Of the following self-contained Sumerian compositions, the first three have echoes within the GE: Gilgamesh and the Land of the Living; Gilgamesh and the Bull of Heaven; Gilgamesh, Enkidu and the Netherworld; Gilgamesh and Agga; The Death of Gilgamesh. A Sumerian flood story which does not feature Gilgamesh is eventually redrafted for inclusion in the GE.

## B. Versions

We do not yet know when and how the independent narratives about Gilgamesh were first woven into a whole; a very late tradition, which is beyond present confirmation, has assigned the composition of the epic to a Gilgamesh contemporary, a diviner named Sin-leqi-unninni. By the LB Age, Gilgamesh's adventures had come into full vogue in the Near East so that major Mesopotamian sites continue to yield GE copies and fragments (some as yet unpublished). Emar in Upper Syria and Megiddo in Canaan have contributed Akkadian fragments as has Hattušaš, capital of the Hittite empire. Additionally, Hattušaš has produced Hittite and Hurrian adaptations of Gilgamesh's exploits.

Because no complete edition of the epic has survived from a single site, scholarship has created a composite using tablets originally belonging to diverse renditions (or recensions) of two major versions of the GE: one stemming from the latter half of the Old Babylonian (OB) period (1750–1600 B.C.E.), the other influenced by Neo-Assyrian (NA) scholarship (750–612 B.C.E.), but refined over the next four centuries. A third edition, of which we have but fragments, may have been completed during the Middle Babylonian (MB) period (around 1250 B.C.E.). Some scholars attribute one of the later versions to the legendary Sin-leqi-unninni. The various versions of the GE share major characters as well as specific episodes. They differ appreciably, however, in how they begin or end, and in the way they manipulate individual scenes. They also diverge in their perspectives on life, their controlling metaphors, and the themes which give integrity to the whole narrative. A comparison may be made with the various editions of the Tristan narratives which shared characters and episodes, but addressed differing audiences.

## C. Contents of Two Versions

The NA version of the GE opens with the poet's invocation and "argument" about a man who has seen and accomplished everything possible; who has learned much from common experience as well as from hidden sources (the netherworld?); who has knowledge of a pre-diluvian past inaccessible to ordinary mortals; who chooses to re-

cord everything about his exhausting journey. Nothing of the tale, therefore, is invented, and lest anyone doubts its authenticity or accuracy, the poet takes the audience on a tour of Uruk. The listeners draw closer to its walls, enter its Eanna temple, and inspect the fortifications built by the protagonist. They are guided to a corner where, upon extracting a lapis lazuli tablet from a copper box, they can read a most beautiful hymn to the hero, Gilgamesh: an awesome king, offspring of the goddess Ninsun and of the mighty Lugalbanda. This hymn, in fact, inaugurates the OB version of the GE.

Nothing in ancient literature matches the generative and integrative powers of this poem, as it prepares the audience to expect the extraordinary: deeds eliciting pain and suffering, but also conferring illumination and wisdom, abound, and mysteries about the Flood and the Netherworld are resolved. The poet's exercise is not just pedagogic, however, for in disclosing Gilgamesh's ultimate achievement—the building of Uruk's defenses—is within human ability, the poet accords the audience a standard by which to measure Gilgamesh's triumphs or failures and instills in it an ironic vision by which to evaluate flaws when he acts beyond human capacity.

The tale quickly establishes its setting, opening on an obstreperous king who will not grant his urban subjects their dignity. Upon appeal, the gods ask Aruru to produce a "double"—the Akkadian here is difficult—of Gilgamesh, equally aggressive, so that the two can absorb each other's energy. Aruru, however, creates a double of the god Anu, thereby changing the future of that relationship. Enkidu's formation reverses the virtues of cultured folk: he cannot groom, feeds like animals, and prefers their company. Enkidu, therefore, compares to Gilgamesh, not in physical stature (although the OB version is literal here), but in his ability to thwart nonurban dwellers who live by snaring animals. A frustrated hunter solicits Gilgamesh who sends a harlot to tame Enkidu. The NA is psychological in recounting the ensuing transformation. Even after a week of mating, Enkidu establishes no emotional bonds with the woman. When he eventually discovers his humanity, sexuality is not the teacher; rather, the human odor he absorbs frightens the animals into abandoning him to the lass's comfort. The harlot moves him from his now empty world to that of Gilgamesh. There, the goddess Ninsun readies her son Gilgamesh for Enkidu's arrival by interpreting powerfully foretelling dreams.

In the OB version, however, the animals' rejection does not cause Enkidu's illumination, instead, the harlot becomes maternal and pedagogic immediately after their sexual bout. She shares her clothing with Enkidu and leads him, "like a child," to a gathering of shepherds. The scene turns comic as Enkidu serially reverses those habits which separate him from humankind, making him hunt what he once protected. In the OB the role of Ninsun is minimized as a shorter dream sequence is placed before the harlot comes to Enkidu.

The story in tablet 2 is carried best by the OB version. Enkidu enters Uruk and blocks Gilgamesh's entrance into the nuptial hall (where presumably Gilgamesh is abusing his power). The two lock into a terrible fight from which Gilgamesh emerges victorious. However, recognizing each other's strength, they become fast friends.

Tablet 3 is likewise damaged, but much less so in the OB than in the NA version. Gilgamesh seeks glory beyond Uruk, despite Enkidu's premonitions about sinister ends. The NA retains Ninsun's maternal role: she frets over her son's restlessness, places him under the protection of the Sun-god Shamash, and binds Enkidu to his service. The OB, however, focuses on Gilgamesh's plans and, in a remarkable passage, has Gilgamesh admit to human limitations, "Who my friend can scale heaven? Only the gods live forever under the sun. As for mankind, numbered are their days; whatever they achieve is but wind." Gilgamesh's aspirations are not yet beyond human achievements, for although he expects to die battling Huwawa (NA: Humbaba), his deed will long be remembered. In this version, as the town forges powerful weapons for the heroes, it is Gilgamesh who seeks Shamash's help.

The struggle against Humbaba/Huwawa occupies two badly preserved tablets. The 4th tablet of the NA version finds Gilgamesh and Enkidu quickly reaching their destination ("the distance of a month and fifteen day they *traversed* in three days") and egging each other to enter their foe's lair. Tablet 5 is set within the Cedar Forest, which in the OB version includes Mt. Hermon and the Lebanon. The two receive cautionary dreams which they perversely misinterpret. Humbaba attacks and is nearly victorious. Shamash interferes, and the monster begs for mercy. Enkidu, however, urges Humbaba's death, which comes after a brief gap. OB fragments, however, credit Enkidu with the mortal blow and have him discover the secret dwelling of the gods.

Successful beyond their wildest hopes, the heroes acquire perilous hubris. In Tablet 6, known almost completely from NA sources, Ishtar, the divine manifestation of human passions, wants to grant Gilgamesh her favor. He refuses her, but is needlessly insulting as he uses coarse language to catalog her previous indulgences. Angry, Ishtar forces the god Anu to release his bull against the two heroes. Gilgamesh is matador to Enkidu as picador as they dispatch the animal and further anger Ishtar by misusing its carcass. The tablet ends brilliantly, with another of Enkidu's premonitions, "[In my dream,] my friend, why are the great gods in council?"

The gods are in council—we learn from tablet 7—to punish the insolent pair. Shamash directs their anger toward Enkidu and, as he lay dying, the poet arrests the narrative to reflect on the human condition. Enkidu curses first the harlot, then the hunter who brought him to such an end, imposing upon them a life of want and misery. Upon Shamash's interference, however, Enkidu recants, converting his words into blessings. Tablet 7 continues the NA poet's assimilation of other myths. Enkidu has enough breath to report on the Netherworld, resorting to a vocabulary duplicated in Ishtar's descent to the Netherworld.

Preparing to bury his friend, Gilgamesh reconsiders his former perspective on life. He now protests a death which comes suddenly, stealthily, and prematurely. As tablet 8 (NA) obsessively rehearses Gilgamesh's outrage, the epic emulates Gilgamesh's overheated mind; it turns surrealistic, favoring marvelous settings and fantastic characters.

Disheveled and wasting away, Gilgamesh embodies his friend's unpromising beginnings. He roams the countryside, seeking Utnapishtim. Tablet 9 (NA) intimates that

Gilgamesh's wanderings are also inward. Gilgamesh begs for a dream, but in a cryptic scene whose ambiguity and centrality evoke Jacob's Jabbok struggle, Gilgamesh rises to battle unknown enemies (his own fears?). It is conceivable that the epic's remaining activities are but one night's hallucinations.

Gilgamesh arrives at Mashu, twin-mountain fulcrum for Heaven, Earth, and Netherworld whose deadly guardians, scorpion-creatures, direct him to Utnapishtim through an immense, pitch-dark tunnel. At its end, Gilgamesh finds a garden of precious stones. The OB version, apparently lacking these details, has a scene not available to the NA wherein Shamash discourages Gilgamesh's foolish search for immortality.

Of the OB tablet 10, we have but two scenes. In one, Siduri, the gods' tavern keeper, delivers Akkadian literature's most quoted verses ("Gilgamesh, whither rovest thou? . . .") In the other, Gilgamesh meets Surshanabi who can ferry him to Utnapishtim. Henceforth, we lose track of the OB version and can only guess how it ends. That Gilgamesh meets Utnapishtim is certain; that the latter dissuades him from his impossible goal is also certain; how he does so, however, is unknown.

Tablet 10 of the NA cultivates the comic. Siduri bolts her door, thinking Gilgamesh a murderer. Appropriating threats Ishtar used to summon the Bull of Heaven (above, tablet 6), Gilgamesh threatens Siduri. She regretfully guides him toward a boatman (here called Urshanabi) who can cross him to Utnapishtim. The cryptic violence of tablet 9 is replayed, but this time Gilgamesh destroys implements ("Stone items") necessary for crossing the Water of Death. Gilgamesh uses easily decaying substitutes which can leave him stranded at immortal Utnapishtim's island. "The distance of a month and fifteen day" is effected in three days (see tablet 4, and the two carry on a powerful dialogue wherein Utnapishtim affirms truths the OB assigns to Siduri.

Stunned by Utnapishtim's unheroic bearing, Gilgamesh can hope to similarly realize immortality. Utnapishtim, however, stifles Gilgamesh's expectations; his own translation to eternal life proves to be exceptional in circumstance, for the gods will no longer send a devastating flood against humanity. The flood episode, adapted for inclusion into the GE from the NA (rather than the OB) *Atrahasis*, crowns the NA 11th tablet and fulfills the poet's introductory promise to divulge impossible knowledge.

Gilgamesh's commonplace evaluation of the heroic also proves superficial. Albeit ordinary looking, the divinized Utnapishtim needs no sleep and cleverly proves that it is otherwise for the mortal Gilgamesh who needs a seven-day slumber. As Utnapishtim entrusts to Urshanabi Gilgamesh's preparation for reentry into the human world, the poet brilliantly replays steps Enkidu had taken toward civilization. The two steer their boat toward that direction.

The OB version of the GE, which probably had no flood story to tell, may well have ended on this or on a similar proof of Gilgamesh's mortality. The NA rendition, however, shifts suddenly into another test scene. Gilgamesh is summoned back and told of a rejuvenating plant, deep in the waters. He retrieves it, but fearing its powers Gilgamesh decides to test it first on an elderly person from Uruk. When a snake eats the plant and sheds its skin, Gilgamesh

recognizes the loss of opportunity. Sadder but wiser, Gilgamesh returns home, accompanied by Urshanabi. The epic wheels upon itself as Gilgamesh quotes the poem's paean to Uruk's mighty structure and in assuming the poet's voice. Gilgamesh breaks out from his narrative confines to guide all those searching his autobiography for wisdom.

Gilgamesh discovers his limitations as a mortal. His fears of death, however, may yet be with him. The NA version, therefore, closely reproduces in its 12th tablet portions of Gilgamesh, Enkidu and the Netherworld, a Sumerian tale which may be linked to the cult of Gilgamesh as an infernal deity. Gilgamesh interviews the ghost of Enkidu, who amplifies on themes delivered already in tablet 7: Men with many sons, who die in bed or in battle and who retain the love of bereaved are more likely to find peace in the beyond. Enkidu's instructions may thus give comfort to Gilgamesh, freeing him from morbid anxiety about death.

#### D. Gilgamesh and Biblical Studies

When first published, the GE's flood narrative shocked Europe no less than any of Darwin's theories, for it placed into question the uniqueness and authenticity of the Hebrew experience. Links between the GE and Hebrew Scripture are more responsibly evaluated nowadays than during previous generations when Gilgamesh was grist for the *Babel/Bibel* controversy. While scholars still compare the flood accounts in the GE and in Genesis, there is an appreciation that both have adapted traditional narratives to suit their own contexts. Moreover, scholars now generally avoid making judgmental contrasts among the accounts (e.g., which one has a better blueprint for a seaworthy ark or communicates a more spiritual description of the deity). There is also continuing interest in the harlot scene, since it reminds us of Adam's loss of innocence. The GE is often mined for its information on death and the afterlife whenever similar topics are entertained for the Hebrew world.

The most useful studies of the GE and the Hebrew Bible develop from recognition that even in its fragmentary shape the GE is a superb literary accomplishment whose artistry is worthy of comparison with the most accomplished pages of Scripture; that resolving how the GE's versions achieved their intricate structures can enhance our understanding of Hebrew narrative techniques; that so rich a storehouse of words, characters, metaphors, themes, and scenes can only make us better aware of the heritage the Hebrews could adopt, adapt, or even reject.

J. M. SASSON

**GILOH** (PLACE) [Heb *gilo*]. Var. GILO. GILONITE. One of eleven towns in the hill country of Judah, located in the general vicinity of Debir (Josh 15:51). It was also the hometown of Ahithophel, one of David's counselors (2 Sam 15:12; 23:34) who played a key role in Absalom's revolt against David. The town is often identified with Khirbet Jala, about 5 miles N-NW of Hebron, an identification that is problematic in that it locates Giloh more in the vicinity of Beth-zur (Josh 15:58) than of Debir (15:49; *IDB* 2: 399). It is more likely to be found somewhere S and W of Hebron near Kh. Rabud (M.R. 151093). See *MBA*, map 130.

GARY A. HERION

**GILOH** (M.R. 167126). An Iron Age site located in (and named after) a S suburb of modern Jerusalem, on the W side of the watershed and main road leading from Jerusalem to Hebron. Excavations at the site, directed by A. Mazar between 1978–82, revealed an Iron Age I village, which may be identified as one of the earliest Israelite settlement sites in the region of Jerusalem.

The site covers about 2 acres and is situated on top of a high summit, overlooking the Valley of Rephaim on the N, and Bethlehem on the S. The summit is rocky and no water sources or fertile land are nearby. The village was established on bedrock early in the 12th century B.C. and existed for only a short time. It was probably abandoned before the end of the 12th century.

The S part of the site was protected by a defensive wall. Inside, the area was divided by long walls into several units. One unit contained a large animal pen. The building technique was very rough and the walls were uneven and poorly constructed. The house contained a courtyard divided by rough stone pillars into roofed and unroofed areas. A rectangular room and two square rooms bordered the yard on two sides. This house is one of the earliest examples of a "pillared building" (including the "Four Room House") which became common during the entire Iron Age.

In the N end of the site a foundation of a square tower was revealed, measuring 11.7 × 11.7 m. Its foundation was well built of large stones. This might have been a fortified tower, a feature unknown in other settlement sites of this period.

The finds in the excavation are typical of the settlements in the mountain region—few pottery types were in use, mainly large "collar rim" pithoi, smaller portable jars, cooking pots, and a few other undecorated bowls and kraters. A bronze spearhead of well-known Canaanite shape was found, which probably originated in a Canaanite workshop. This site is one of the few excavated sites which may throw light on Israelite material culture in its earliest phases. The village apparently accommodated only a few families who lived mainly on animal breeding and some agriculture. It was abandoned sometime during the period of the Judges, probably because its location did not allow further development into an agricultural village.

In the 8th or 7th century B.C., a square tower (ca. 10 × 10 m) was constructed on the site. Its walls were 2 m thick, and it was probably a tall and massive structure. It probably served as a watchtower, part of a system of similar small

forts which protected the approaches to Jerusalem. It could have played a role in the system of forts used to transfer fire signals to Jerusalem. See also ABU ET-TWEIN, KHIRBET.

The site may tentatively be identified with Baal Perazim, where David defeated the Philistines in the battle at the Valley of Rephaim (2 Sam 5:20; 1 Chr 14:11). Though the settlement village probably was not reoccupied during the time of David, the name may have been preserved from the earlier period. The reference to "Mount Perazim" in Isa 28:21 may refer to the same ridge, where in Isaiah's time the watchtower may have been in use.

AMIHAY MAZAR

**GIMEL.** The third letter of the Hebrew alphabet.

**GIMZO (PLACE)** [Heb *gimzô*]. A town in the Shephelah captured by the Philistines from Judah around the time of the Syro-Ephraimite war (ca. 734 B.C.E., see Thompson 1982, esp. pp. 104-114; 2 Chr 28:18). Presumably the town had originally come under Judean control at the time of Uzziah's incursions into Philistine territory (2 Chr 26:6-7; but see Rainey 1983: 15 who believes that Gimzo had originally been in Israel's territory). Taking advantage of Judah's weak position in the face of political and military pressure from Aram and Israel, the Edomites and the Philistines sought to reextend their borders at Judah's expense (2 Chr 28:17-18). The Philistines encroached upon the Negeb and the Shephelah, capturing the towns of Beth-Shemesh, Aijalon, Gederoth, Soco, Timnah, and Gimzo. Most would identify the site of Gimzo with modern Gimzo (Jimzu; M.R. 145148) in the Aijalon Valley, 3 miles SE of Lod (Lydda) and 4 miles E of Ramla (see *GP* 2: 338; *LBHG*, 435). Doermann (1987: 142, 144) however has suggested locating Gimzo at Tel Hesi (Tell el-Hesi; M.R. 124106) in the Philistine coastal plain. At a later period, Gimzo was known as the home of Rabbi Nahum.

CARL S. EHRLICH

**GINATH (PERSON)** [Heb *gînat*]. Father of Tibni, whose claim to the Israelite throne was supported by half of the people over against that of Omri (1 Kgs 16:21-22). The feminine ending of Ginath suggests that the term is the

name of a tribe or place-name, but in 1 Kings it refers to a person. (See Gray *Kings* OTL; Jones Vol. 1 of *Kings* NCBC; Noth *IPN*, 240.)

PAULINE A. VIVIANO

**GINNETHON (PERSON)** [Heb *ginnêton*]. 1. A priest and signatory to the covenant established by Ezra (Neh 10:6).

2. Head of a priestly family serving during the reign of Joiakim (Neh 12:16). If, as some argue however, it is an ancestral name, then both references may be to the same family (Ward *IDB* 2: 399).

FREDERICK W. SCHMIDT

**GIRDLE.** See DRESS AND ORNAMENTATION.

**GIRGASHITE** [Heb *gîrgāšî*]. One of the peoples comprising the Canaanites, who descended from Noah's son Ham (Gen 10:15-16; 1 Chr 1:13-14). They were indigenous to the land when Joshua led the Israelites across the Jordan River in the Conquest, along with the Amorites, Canaanites, Hittites, Hivites (missing from Neh 9:8), Jebusites, and Perizzites (Deut 7:1; Josh 3:10; 24:11; Neh 9:8).

Reference to a similar name, *grgš* and *bn grgš* "son of Grgs," has been found in the Ugaritic texts (*UT* 3:381, no. 619), showing that the name form existed in Canaanite territory early in the period of the Israelites. Two suggested identifications have been made, but neither is convincing. A location in Asia Minor, based on Karkisa in Hittite and *krks* in Egyptian texts, places the people too far N. An identification with the Gergesenes (Gerasenes, Gadarenes; Matt 8:28; Mark 5:1; Luke 8:26, 37), who were in Transjordan, places them on the wrong side of the Jordan River, since Israel is explicitly said to have encountered them on the W side of the Jordan (Josh 24:11).

DAVID W. BAKER

**GIRZITES** [Heb *gîrzî*]. One of the peoples against which David and his troops ventured forth from their base at Ziklag (1 Sam 27:8). Mentioned along with the Geshurites and the Amalekites, their area of settlement would have been somewhere in the region between Philistia and Egypt (see Edelman 1988: 254). However, the scholarly consensus is that the Girzites, unknown from any other source, most probably did not exist. Already the MT corrected the Ketib reading *gîrzî* to the Qere reading *gîzrî* "Gezrites," meaning inhabitants of Gezer. Gezer, however, lies much too far to the N to fit the context of this passage. Evidence from the LXX would indicate that the MT reading either represents a conflate text presenting two variants in Geshurites and Girzites/Gezrites (Driver *NHT*, 211; McCarter *1 Samuel* AB, 413) or is a result of a dittography of Geshurites (Aharoni *EncMiqr* 2: 554).

CARL S. EHRLICH

**GISCALA** (M.R. 191270). The Greek name of a site located some 5 km N off Meiron in Upper Galilee. Its fame is due in part to the reputation of John ben Levi of Giscala who became an important leader of the First Jewish War against Rome in 68 c.e. (Josephus, *Life* 70–76; *JW* 2.590–92) and who challenged Josephus' command in Galilee. Its Arabic name is el-Jish (= Heb Gush Halav). The site, in the wadi E of the contemporary village, attracted the attention of modern explorers such as Renan, Wilson, Conder and Kitchener, Guérin, and Kohl and Watzinger. Medieval visitors probably visited the archaeological ruins in the upper village where sepulchral remains were known and some remains of synagogues were believed to exist. The relationship between the upper and lower cities is not clear but the two quarters apparently existed side by side since antiquity.

The only archaeological work that has been conducted at the site has focused on two tomb complexes in the upper city (Makhoully 1938; Vito and Edelstein 1974) and the synagogue in the lower city (Meyers, Strange, Meyers 1979). The tombs and rather large monumental structure resembling a mausoleum date to the Late Roman and Early Byzantine periods. The simple tomb gives some evidence of being Christian while the mausoleum seems to be Jewish largely due to the absence of Christian decoration. In neither the upper or lower cities have any significant remains of the time of John of Giscala been found, though there is abundant ceramic material of the 1st century in both places. A similar problem is posed by the Mishnaic reference which says that Gush Halav was fortified in the time of Joshua (*Arak* 9.6); limited sherds of the early Iron Age have been found, but nothing at all that might be construed as walls. Although Jerome twice mentions that Paul the Apostle was born in Gush Halav, there is no data whatsoever to support or contradict such a notion.

Major excavations in the lower synagogue site were undertaken in 1977–78, and the chronological results of these excavations may be summarized as follows: the building history of the synagogues consisted of Period I (ca. 250–306 c.e., Middle to Late Roman), Period II (ca. 306–363 c.e., Late Roman), Period III (ca. 363–460 c.e., Byzantine 1), and Period IV (ca. 460–551 c.e., Byzantine 2a). Other periods represented at the site are: the LB–Iron Age I, Iron Age II, Hellenistic 1–2, Early Roman, Byzantine 2b, and the Early and Late Arabic periods. The extraordinary feature of this site is that the large accumulation of debris occurred without the creation of a tell or artificial mound above ground. All of the pre-synagogue materials, however, give evidence of an important village in late First Temple times and throughout the Second Temple period (515 B.C.E. to 70 c.e.) and the century and a half after the destruction of the temple.

The synagogue that was erected in the mid-3d century is a basilical structure with two rows of four columns running N-S, dividing the internal space of the building into a central nave and two side aisles. The dimensions of this internal space are 13.75 m long and 10.6–11.00 m wide. The only monumental entrance to the building lies in the center of the S, ashlar wall which is oriented toward Jerusalem. Another entrance may be located in the NW corner at the top of a small stairway in a small corridor.

The underside of the lintel which adorns the entryway in the S wall is decorated with an eagle. In addition, the rectangular building is surrounded by a corridor or storage area on the W, a gallery or additional seating area on the N, and one or more rooms on the E, thereby extending the overall space to 17.5 m N-S, by 17.5–18.00 m E-W. The German team of Kohl and Watzinger (1916) which surveyed the site in 1905 was unable to locate the interior walls on the E and W, hence their ground plan reveals a nearly square building.

A relatively large *bema*—a platform on which Scripture was read—rectangular and finely executed, on the SW section of the S facade wall may be associated with the Period I building. It appears to have been badly damaged in the earthquake of 306 c.e., but a similar, less elegant one, is executed for the Period II building.

The devastation created by the 306 earthquake led to other changes in the building also. A floor of white mosaic was laid at this time and possibly one or more of the rooms on the NE were added. The first column in the SE row of columns was reerected at this time and donated by Jose bar Nahum. Either after 306 or just after the 363 earthquake the heart-shaped columns associated with the gallery on the N were added. Benches along the three sides, N, E, and W, were used for limited seating. In general, people sat on the floors.

The floor plan of the Period III and IV building remained the same except for the *bema* which was rebuilt after 363 in a smaller, far more modest fashion in the same spot on the SW S wall. There was a slow deterioration in the building that culminated in the mid-6th century when the building and site began to decline. The change in fortune of the building may in general be related to the decline in fortunes of Jews in Palestine on the eve of the Persian and Moslem conquests.

Some scholars have suggested, however, that not all the ancient inhabitants of Gush Halav were Jewish and that the settlement in the upper city might have been Christian or Jewish-Christian and the one in the wadi, Jewish (Saunders 1977). Whatever the reasons, both synagogue and site were in major decline by the end of the Byzantine era and only patches of settlement remained for the newcomers of the 7th century.

The Gush Halav synagogues are important also because they present an unusual series of basilicas that do not adhere to the older view of the evolution of Galilean synagogues (see SYNAGOGUE) but instead demonstrate the inventiveness of local architects adapting to local conditions. Sacred orientation toward Jerusalem, the holy city, remains the most distinctive aspect of the synagogues at Gush Halav and the S wall, the only one executed in fine ashlar masonry, is fitting testimony to that dominant idea. Despite pressures from many quarters and increasing legislation which limited the mobility of Jews in the empire, the existence of such a grand building over so long a period attests to the tenacity of Jews and their ability to persevere in difficult times.

ERIC M. MEYERS

**GISHPA** (PERSON) [Heb *gīšpāʿ*]. An overseer of the Nethinim, the temple officers (Neh 11:21). It has been noted (BDB, 177–78) that Gishpa may be a corruption of Hasupha. Myer (*Ezra, Nehemiah* AB) suggests this verse was a late edition and is dubious of a parallel between Gishpa and Hasupha. His argument notes that Ziha, another overseer, is used in all three passages listing the Nethinim (*Ezra* 42:43; *Neh* 7:46; 11:21), but Gishpa is only found in *Neh* 11:21. See NETHINIM.

GARY C. AUGUSTIN

**GITTAIM** (PLACE) [Heb *gittāyīm*]. Town in which the Canaanite population of Beeroth took permanent refuge for reasons unstated (*2 Sam* 4:3). It may be that as members of the Gibeonite federation (*Josh* 9:17) the people of Beeroth had also become victims of Saul's hostilities against the Gibeonites (*2 Sam* 21:2; Blenkinsopp 1972: 8–9, 100). In *Neh* 11:33, Gittaim appears in the list of towns inhabited by the Benjaminites during the period of the restoration. The meaning of Gittaim is "Double Gath" or "Double Winepress." Considering Gittaim's historical association with the Benjaminites, one could possibly identify it with the town of Gath which in *1 Chr* 8:13 appears to be near Benjaminite territory at Aijalon, and in *1 Chr* 7:21, near Ephraimite territory. This Gath must not be confused with Gath of the Philistine pentapolis (*1 Sam* 5:8). Perhaps Gittaim may be located at Ras Abu Humeid (M.R. 140145).

**GIZONITE** [Heb *gizōnī*]. A gentilic adjective applied to Hashem, one of the Mighty Men of David (*1 Chr* 11:34). See DAVID'S CHAMPIONS. By comparison with similar usage elsewhere (e.g., *2 Sam* 15:12, "Ahithophel the Gilonite . . . from his city Giloh") this should refer to a place named "Gizo"; but such a place is unknown in the Bible.

The parallel passage in MT of *2 Sam* 23:32 omits this word, reading only the proper name, Jashen.

Many scholars propose a geographical solution to the problem: some follow Elliger's (1935: 31, 53) conjecture and read "Gimzo," a place situated SE of Lydda (*2 Chr* 28:18), near Shaalvim, the previous place mentioned in this list (*1 Chr* 11:33). Ben Zvi (1948: 606), however, considered Gimzo as too far W to be the origin of one of David's Mighty Men; and since it was not mentioned in the list of Solomon's cities (*1 Kgs* 4:9) he conjectured "Beit Jiz, southwest of Latrun"; but this site lacks confirmation.

Textual variants abound in the LXX for Hashem and its parallel in *2 Sam* 23:32. The Lucianic texts of the LXX clarify *2 Sam* 23:32 by adding *ho gounai*, reflecting Heb *haggūnī* (*Num* 26:48), "the Gunite." For *1 Chr* 11:34 LXX reads *Osom ho Gennouni*, probably reflecting a proposed Heb, \**hāšēm haggēnūnī*, "Hashem the Gunite." Text-critical study of important variant readings thus points to "Gunite" as the best reading. Linguistic study, however, suggests that Heb *hgwny* is more likely to have derived from *hgwny* than the reverse; thus the difficult term "Gizonite" might be the older reading (McCarter *2 Samuel* AB, 492–93).

**GLACIS**. See FORTIFICATIONS (LEVANT).

**GLAD TIDINGS**. The starting point for a discussion of "glad tidings" must be the KJV, for this translation established the phrase as one way to speak of the proclamation of the Gospel. "To declare, bring, or show glad tidings" occurs four times in the KJV: *Luke* 1:19; 8:1; *Acts* 13:32; *Rom* 10:15. In each instance the phrase translates the verb *euangelizomai*. Closely related to this phrase is the expression "to bring good tidings," which translates both *euangelizomai* (e.g., *Luke* 2:10) and Heb *bāšar* (e.g., *2 Sam* 4:10; *Isa* 40:9; 52:7). The significance of the words "glad (good) tidings" for the study of proclamation in the biblical tradition far exceeds their presence as a translation in the KJV, however. "Glad (good) tidings" explicitly locates the route of proclamation in the announcement of (good) news.

The earliest uses in the Hebrew Bible of the verb *bāšar* (regularly translated in the LXX as *euangelizomai*) concern the announcement of battle results. The word *bāšar* is used to announce news of defeat (*1 Sam* 4:17), but primarily announces news of victory (*1 Sam* 31:9). The most concentrated and dramatic cluster of *bāšar* is in *2 Samuel* 18, where David awaits news from the battlefield about the fate of Absalom and his revolt. This scene is rich with irony, all of which hinges upon the announcement and reception of news (18:19, 20, 25, 26, 27, 31). This densely textured narrative conveys the power inherent in the announcement of news, for it is only in the moment of the announcement of the tidings from the battlefield that Absalom's death becomes real for David.

The word *bāšar* is given a cultic function in its use in the

Psalms. In Pss 40:10 and 96:2 *bāšar* is used to announce Yahweh's salvation and sovereignty. In Psalm 40 the announcement is made to the "great congregation"; in Psalm 96 to "the nations." The shift from battlefield to cult is important. The announcement of news is linked to Israel's identity and vocation as the people of Yahweh.

The most important development in the use of *bāšar* in the Hebrew Bible occurs in Second Isaiah. In Second Isaiah, *bāšar* becomes a distinctively theological term (TDNT 2: 708). In Isa 40:9; 41:27; and 52:7 *bāšar* is used to announce the beginning of God's reign and a time of eschatological newness. What is most significant about the use of *bāšar* in Second Isaiah, however, is not simply the content that is announced, but that the words of the announcement itself make God's new reign a reality for those who hear. That is, the announcement, the "tidings," are themselves the consolation for which Israel yearns. This highly intentional theological use of *bāšar* continues in Third Isaiah (Isa 60:6; 61:1) where the word that is announced clearly is an embodiment of comfort and salvation.

In pre-Christian Greek literature (apart from the LXX), the verb *euangelizomai* can be traced as far back as the writings of Aristophanes (*Eg.* 643). As in the Hebrew Bible, the verb is used primarily to announce news. The announcement of news ranges from victory in battle (Plut. *Pomp.* 66) to the birth of a child (Theophr. *Char.* 17.7) to the death of an acquaintance (Heliod. 2.10). *Euangelizomai* takes on a religious significance in the Greek literature (TDNT 2: 711) when it is paired with *sōtēria* and *eutuchēma* or *eutuchia* (e.g. Heliod. 10.1f.). The pairing with *sōtēria* has parallels in the NT, but the pairing with *eutuchia* is foreign to NT usage.

The NT notion of good news (glad tidings) builds directly upon the theological developments in Second and Third Isaiah. Paul's use of Isa 52:7 in Rom 10:15 is a good example. Paul uses Isa 52:7 to depict the role of the preacher, the one who announces glad tidings, in leading people to faith in Jesus Christ. The spoken word is itself a critical element in the inbreaking of God's new age. See Stuhlmacher 1968: 109–206.

In Isaiah and the NT, the word that announces glad tidings is not simply a vehicle for conveying important news. Rather, the word itself is now the news. The spoken word of the announcement makes God present and life new. To hear the spoken announcement of glad tidings is to participate in the offer of salvation.

GAIL R. O'DAY

**GLAPHYRA (PERSON).** Two women named Glaphyra appear in the record of Cappadocian and then Judean dynastic politics late in the 1st century B.C. The second married two Judean princes and a N African king, leaving a line of well-known descendants, active in the later house of Herod.

1. The first Glaphyra attracted the attention of Antony as an *hetaera*, "courtesan." The story went that her beauty led Antony to bestow the kingdom of Cappadocia on her

son, Archelaus. Whatever the truth of the matter, King Archelaus ruled for 50 years after this (Dio Cass. 49.32.3; App. *BCiv* 5.7). Martial could not resist a scurrilous reference to this (*Spect.* 11.20.3).

2. The second Glaphyra (*PIR*<sup>2</sup> G 176) was the granddaughter of #1 above, and daughter of Archelaus, perhaps by an Armenian princess, because her own son is later described by Augustus (*Res Gestae* 27) as "from the royal house of the Armenians." Glaphyra herself claimed descent from Darius the Great of Persia (*JW* 1.476) and this claim could be made by a descendant of the Armenian dynasty.

Glaphyra's first marriage took her to Judea where she wed Herod's son Alexander about 18 B.C. She soon found trouble, partly through the beauty she had inherited from her grandmother, for Herod himself felt a passion "difficult to control" toward her. This annoyed Herod's sister Salome, as did Glaphyra's behavior toward Herod's daughter Bernice, who had married Aristobulus, brother of Glaphyra's husband. Glaphyra left no doubt that she perceived herself superior to Bernice and in fact to all the other ladies at court, of whom she considered herself "mistress" (*despotis*) on the grounds of more noble descent (*Ant* 16.11, 193, 206; *JW* 1.476).

Glaphyra's popularity worsened as her father began to intervene in Judean domestic politics, even to the point of assisting Herod's two sons against his wishes. In 7 or 6 B.C., Herod finally executed Glaphyra's husband and returned the woman with her dowry to King Archelaus.

Glaphyra then went in marriage to King Juba (*PIR*<sup>2</sup> J 65) of Mauretania. The marriage is attested not only by Josephus but also by an inscription in Athens calling her "Queen Glaphyra, daughter of Archelaus and wife of Juba." It soon ended, however, apparently in divorce; Josephus (*JW* 2.115) mistakenly regards her as widowed, but Juba ruled on until at least A.D. 23, subsequently married to Cleopatra Selene, daughter of the famous Cleopatra VII of Egypt.

Glaphyra's life ended strangely. She married another son of Herod, Herodes Archelaus (*PIR*<sup>2</sup> A 1025). He had become so enamored of her that he divorced his wife, Mariamme (*PIR* M 204), despite the fact that marriage to his brother's wife transgressed Jewish law (Jos. *Ant* 17.341). Once more at the Judean court, Glaphyra had a dream in which her first husband, Alexander, reproached her for the marriage to Juba and especially for this third marriage to his brother, calling it "unfitting" and "shameless." Glaphyra reported the dream and then died shortly afterward.

She left an important legacy. To Alexander she had borne two sons. One became the later King Tigranes V (*PIR* T 149) of Armenia, installed there by Romans relying on his claims through her of local descent. A second son, Alexander (*PIR*<sup>2</sup> A 499), sired another King of Armenia, Tigranes VI (*PIR* T 150), who attempted to rule there from A.D. 60 to 62. He in turn left a son, King Alexander (*PIR*<sup>2</sup> A 500 = J 136), who became under Vespasian the final king in Cilicia. (For details on all of the above, see Sullivan ANRW 2/7/2: 1161–66; PW 7: 1381).

**GLASSY SEA.** See SEA OF GLASS.

**GLEANNING.** See HARVESTS, HARVESTING; AGRICULTURE.

**GLOSSES, TEXTUAL.** Additions of extraneous notations or comments to a text made by a scribe or copyist. Glosses are generally brief, consisting of one or two words, a short phrase, or even a sentence. They may be made deliberately by a scribe who added his own notations or comments, or those found in the margins of his exemplar or other sources, in order to clarify an ambiguous text. In other cases, they may have been added by a scribe or copyist who believed that a marginal notation from the exemplar was an omission from the original text which he then corrected in his own copy. It is also possible that such additions were made inadvertently by a copyist who accidentally incorporated marginal notations or comments from his exemplar into the text.

General discussions of glosses appear in text-critical handbooks including Metzger (1968: 27), Deist (1978: 44–46), Würthwein (1979: 110), Weingreen (*IDBSup*, 437–38; 1982: 79–90), and McCarter (1986: 32–36). Examples of explanatory or exegetical glosses in the MT include Gen 7:6, where *mayim*, “water,” has been added to explain the rare *mabbûl*, “flood,” (McCarter 1986: 32–33) or Zeph 1:3 where *wēhammakšēlôt ʾet hārēšāʿim*, “and those who cause the wicked to stumble,” was added to redirect a universal condemnation against all the earth to those responsible for wickedness. Glosses also preserve variant readings as in 1 Sam 12:13 where two relative clauses concerning the choice of Saul as king, *ʾāšer bēhartem*, “whom you chose,” and *ʾāšer šēʾeltem*, “whom you requested,” preserve alternative readings with differing views of the party responsible for Saul’s selection (Weingreen 1982: 84–85). An example of the interjection of a scribe’s assent to the sentiments of a passage appears in Isa 40:7 where *ʾākēn hāštr hāʿām*, “indeed the people is grass,” is clearly intrusive in its context (Deist 1978: 45).

Although glosses have played a very influential role in the interpretation of biblical texts throughout the history of modern critical scholarship, there has been relatively little systematic study of the phenomenon. The earliest stages of scholarship focused on variant readings in manuscripts and versions as the primary means for identifying glosses in order to eliminate them and thereby recover the “original” text. Waterman’s early attempt (1937) to define secure criteria for identifying glosses when no manuscript evidence was available to validate the identification is likewise based on an interest in recovering the original text. His criteria concentrates on inconsistencies in the text and includes disruptions of grammar, incongruity of ideas,

and the extraneous nature of a statement, the elimination of which would not damage the context.

Fohrer’s groundbreaking study of the glosses in Ezekiel (1951) produced the first systematic classification of the phenomenon in the Hebrew Bible. In addition to his identification of six basic categories of glosses, an important aspect of his study is his attempt to describe the means by which glosses might enter a text based on the principles of rabbinic exegesis.

The most comprehensive study to date is that by G. R. Driver (1957) who attempts to define principles for recognizing glosses, to classify them according to their characteristic signs or forms, and to identify the purposes which they are intended to serve. Driver’s study establishes various characteristic marks of glosses including Hebrew pronouns (*hūʾ*, *zeh*, etc.), particles (*ʾāšer*, *ʾet*), prepositions (*bē-*, *lē-*), copulas (*wē-*, *ū-*), interrogative particles (*hā-*, *hālōʾ*), Aramaisms, syntactical and grammatical disruptions, and disruptions of meter or rhythm. The most important criteria, however, is the absence of the suspected word or phrase from the older versions. Their primary purpose is to obviate difficulties, such as interpreting unknown or obscure words and sentence constructions. Other purposes include presenting variant readings or parallel passages, explaining historical allusions, enhancing or mitigating the force of the original text, expressing feelings or theological opinions, and inserting liturgical features such as the enigmatic *selā* found in many psalms.

Weingreen’s studies (1957; 1963; 1964; 1976; 1982; *IDBSup*, 436–38) have added several important refinements to scholarly understanding of the phenomenon. For one, he emphasizes the rabbinical character of glosses insofar as they represent an early form of biblical interpretation which stands at the beginning of the evolution of rabbinic interpretation. At the same time, he is careful to distinguish glosses from editorial additions. Editorial additions are deliberate insertions made by a scribe (Heb *sōpēr*) and are intended to be an integral part of the text. Glosses are the result of the activity of a copyist (Heb *liblār*) who copies extraneous words or phrases, either deliberately or inadvertently, from the margins of his exemplar into the Biblical text. Consequently, the identifying characteristics of glosses include their intrusive nature, their succinctness, and their clarifying function. It is doubtful whether glosses and editorial additions can be separated so neatly, but Weingreen’s work does emphasize the need to consider the interpretative function of glosses and their place in the development of Jewish biblical interpretation.

With the increasing interest in the interpretative character of glosses, it is clear that the phenomenon should be considered in relation to recent advances in canonical hermeneutics, text critical methodology, and the interpretative character of other scribal practices (e.g., Masoretic notations and treatises, Qere/Ketib, Tiqqune Soferim, Scholia, etc.), which focus on the variety of text traditions and their function and interpretation within their respective communities (Sanders 1979). Consequently, a systematic reinvestigation of the phenomenon of glosses will be necessary to define the generic character of glosses and their function in text transmission and interpretation.

**GNOSTICISM.** The term “gnosticism” (from the Gk word for “knowledge,” *gnōsis*) was first used in the 18th century to refer to a current in the religious life of late antiquity which had direct bearing on the development of the belief and practice of the early church. The term has traditionally functioned in a pejorative sense.

  4. Later Developments

#### A. Definition and Nature

The term “gnosis,” referring to a phenomenon from the early church and its religious and philosophical contexts, was introduced into a broad array of modern academic disciplines by church historians, especially those in the field of NT scholarship. Early Christian writers already used the term as a general name for various social groups which were not content with orthodox practices and beliefs otherwise widely accepted. The first certain early Christian reference to the term, and this in an orthodox text, is 1 Tim 6:20. In reflecting on the theological problem of the

origin, development, and continued existence of evil, these gnostic groups were at odds with developing orthodoxy. Radical dualism was a prime factor in the gnostic conceptual framework. Dualistic views were already found, to varying degrees, in Platonism and in Iranian and Zoroastrian religious thought, and by the Hellenistic period had entered into early Judaism as is evidenced by various writings from Qumran and in a broad array of apocalyptic texts. Such polarizing concepts provided a philosophical and religious solution to the human predicament, including the experience of difficult political situations which were believed to have had their ultimate origin in prehistory (*Urzeit*) when the cosmos was first created. The experience of the conquered peoples of the Near East enabled them to perceive such ultimate issues behind the tumultuous political events from the time of Alexander the Great (d. 323 B.C.E.) and later with the political occupation of the East by the Romans.

To be sure, such a dualistic view was not new, but it was conceived by the gnostics in a unique fashion. Beginning with the Genesis account of creation and the element of belief in an absolute, transcendent God, many strove to attain and develop the knowledge (*gnōsis*) that this world is the product of a foolish creator (demiurge) who set to work without the permission of the highest and therefore “Unknown” God. This foolish creator was assisted in the creation process by a lower angel or planetary being. In order to put an end to the monstrous process of physical (nonspiritual) creation, the highest God had only one choice: to avail himself of cunning countermoves which he initiated among human beings, understood to be the apex of the physical creation. Without the knowledge or consent of the foolish creator, the highest God provided humanity with an otherworldly, divine substance variously called “spirit,” “soul,” and “spark.” This substance enabled humanity (called the ideal Adam) to see through the monstrous physical work of the lower creator and to perceive as the true goal of humanity a return to the spiritual realm of the highest God, which was often depicted as the “Kingdom of Light.”

In the gnostic view, the end (*telos*) of history was the ultimate dissolution of the cosmos and the return of the human “sparks of light” to the Kingdom of Light. The knowledge (*gnōsis*) of these cosmological and anthropological connections is, of course, a special and supernatural knowledge which is mediated to the gnostics (“the knowers”) through special revelation. This revelation was made available either through various messengers, who acted on the instructions of the highest God, or through the traditional form of the myth, the sacred narrative which recounted the events which occurred in the primitive period when the mistake of the physical creation first took place, events which were understood to be the ultimate causes for the problematic present state of humanity.

The gnostics understood themselves to be the elite “chosen people” who, in distinction from the “worldly-minded,” were able to perceive the delicate connection between world (cosmology), humanity (anthropology), and salvation (soteriology). The goal of gnostic teaching was that with the help of insight (*gnōsis*), the elect could be freed from the fetters of this world (spirit from matter, light from darkness) and so return to their true home in

the Kingdom of Light—for that alone is the meaning of “salvation.” It is not a matter of deliverance from sin and guilt, as in orthodoxy, but of the freeing of the spirit from matter (*hyle*), in particular, the material human body. In the course of time, gnostics developed a coherent conceptual framework from both their myths and their practice in behavior and cultus. Their mythology consisted of an “exegetical protest” against the older and widely accepted traditions. This involved a reinterpretation of the older traditions in a manner which was opposed to their original sense. The field of practice, on the other hand, included both their prevalent, world-rejecting ascetic ethos and a curtailing (at least an ideologically-demanded curtailing) of traditional sacramental ritual in favor of a salvation achieved only through insight (*gnōsis*). The supposed libertine traits, which arose from the ascetic desire to overcome the world, are as yet attested only in biased heresiological reports and not in the writings of actual gnostics. Their critical attitude towards traditional sacramental ritual may have included the continuation, reinterpretation, or reestablishing of even older cultic ceremonies. It is to be emphasized that Gnosis was not devoid of cult. That the gnostic “community” was established in the loose social structure of a “school of doctrine” or a “mystery club,” with at most only a rudimentary hierarchical organization (the Manichaeans were exceptions) was formally derived from the ancient social mode of the philosophical or religious association.

### B. Sources: Primary and Secondary

Up to modern times, very little original source material was available. Quotations found in the heresiologists comprised no more than fifty or sixty pages. The so-called *Corpus Hermeticum*, the origin of which is still largely unexplained, contains a few Greek tractates whose tenor is gnostic, even if they have been strongly influenced by Hellenistic–Egyptian (Alexandrian) traits. An example is the first text in the collection, which has been known in Europe since the 15th century as *Poimandres* (Shepherd of Men). The only extensive original works were two Coptic manuscripts brought to England in the 18th century but not published until the end of the 19th. They contain the so-called *Pistis Sophia* (Faith [and] Wisdom), the *Two Books of Jeu*, and four fragmentary texts. Another gnostic Coptic codex was discovered in 1896 by the Berlin church historian C. Schmidt (Papyrus Berolinesis 8502), first published in 1955 and which contains, among other things, two writings which are essential to research on gnosis: the *Apocryphon of John* and the *Sophia Jesu Christi*. Finally, to the texts which claim to be gnostic belong the *Odes of Solomon* (Coptic and Syriac) and the so-called *Song of the Pearl* (= *Hymn of the Pearl* or *Hymn of the Soul*) from the apocryphal *Acts of the Apostle Thomas*. The most extensive amount of gnostic literature has been transmitted through the small baptismal community of the Mandaean, still located in the region of the lower Tigris and Euphrates rivers and in Iranian Karun (Khuzistan). However, this continuing community has only become known in detail since the end of the 19th century. See MANDAËISM.

A decisive event was the discovery in 1945 of thirteen Coptic gnostic books called the Nag Hammadi codices in upper Egypt near the modern village of Nag Hammadi.

See NAG HAMMADI (CODICES). This discovery is one of the most extensive manuscript finds of recent times. The long and difficult process of editing, translating into modern languages (English, German, and French), and commenting began very early in the case of Nag Hammadi texts which were available to individuals (J. Doresse, H.-C. Puech, A. Böhlig, M. Krause, J. Leipoldt, P. Nagel, H.-M. Schenke). Diglot editions are now appearing in Coptic-English and Coptic-French. (For a useful English translation of all texts, see *NHL*.)

The great significance of these new primary sources is readily apparent. Even if until now no precise explanation has been given to how this collection came to be and in what circles particular writings were handed down, the greatest part is still of gnostic origin—at least 40 of 51 writings. In any case, the entire complex seems to have been collected and used by Christian gnostics. From the documents, which were in book form and between leather covers for protection, we can establish that the place where they were found is not far from the place where they were originally prepared in antiquity, that is, in the area of the Egyptian monastic settlements of Chenoboskion: Diospolis Magna (Thebes) and Parva. We can also establish that the age of the documents' preparation, as evidenced by palaeography and the somewhat datable cartonnage (scrap paper used to stiffen the leather bindings), dates them to no earlier than the middle of the 4th century C.E.

In the Nag Hammadi texts, we have a collection of writings made by heretical monks, against whom were directed the orthodox polemics from Alexandria, the spiritual center of orthodox Egyptian Christianity at the time. The common and dominant ascetic and encratic character of the texts makes this thesis even more tenable. Upper Egypt was a very frequent place of refuge for heretical groups, such as the Manichaeans, and also the location of the Coptic language dialect regularly known as “the heretics' dialect” (*Ketzerdialekt*). After Alexandria lost some of its importance under Roman rule, the native cultural life moved to Middle and Upper (i.e., S) Egypt. Evidence for this diffusion is provided not only by the discoveries of gnostic and Manichaean texts but also of classical Greek texts in the same area (e.g., Menander). The Neoplatonist Plotinus (d. ca. 270 C.E.) also comes from Upper Egypt.

Thus the collection of original gnostic texts has been considerably broadened and scholarship has taken the initiative provided by the new materials. Since the texts are almost all translations from Greek originals, though several ultimately derive from Syriac originals, the time of composition, naturally, can be estimated to be earlier than the date when the texts were prepared. On the whole, the composition of the majority of the writings is now dated to the 2d and 3d centuries, and the literary sources of some may date to the 1st century.

Apart from their basically gnostic content, the Nag Hammadi texts are not uniform in their approach but can be organized according to several categories established by the heresiologists. They present us with a rather broad spectrum of gnostic positions. Aside from the Hermetic and decidedly Valentinian texts, the so-called “Barbelognostic” and “Sethian” schools are most prominent. The multiplicity of gnostic modes of thought and action are very clear, and so researchers are provided with the pri-

mary materials needed to reconstruct the nature, diversity, and development of gnostic systems of belief and practice.

It is of great importance that the discovery presents us with both Christian and non-Christian gnostic writings. The latter have been occasionally edited, but only secondarily, by Christian editors. That is, the writings confirm the independence of gnostic from Christian writers, and so corroborate the thesis of the non-Christian origin of gnostic teaching. At the same time, a strong connection with Jewish traditions, especially apocalyptic and extrabiblical, is visible. Thus, the view frequently advocated earlier, that Gnosis germinated on the margins of early Judaism, can no longer be easily dismissed.

On the other hand, in the intertwining of gnostic and early-Christian ideas in the Christian-gnostic texts we can now see the principal background for the polemic of the church's heresiologists. They apparently recognized the real danger that a foreign conceptual world might initiate a popular abandonment of orthodox Christianity. Nevertheless, the gnostics, as creative theologians in their own right, often contributed to Christological, trinitarian, and cosmological teachings. They were occasionally the first to raise such problems for discussion, and they caused the larger church to take a stand on a variety of subjects. Their activity in this regard was of positive value for the development of Christian doctrine. In addition, the new texts occasionally display the role of Greek philosophy in gnostic conceptions, and they also help with the question of the role of Gnosis in the formation of Neoplatonism. Thus, the discovery of the Nag Hammadi codices has already provided us with many new insights and has set an unexpectedly rich agenda for future research on Gnosis.

Before the discovery of the Nag Hammadi texts in 1945, the Church Fathers of the 2d to the 4th centuries provided, naturally in polemical guise, several reports including abstracts from actual gnostic texts (e.g., the *Book of Baruch* by Justin the Gnostic, the *Great Exposition* ascribed to Simon Magus, the *Naassene Homily* and the *Letter to Flora* by Ptolemy). Among these Church Fathers are Justin Martyr (d. ca. 165), Irenaeus of Lyons (ca. 140–200), Hippolytus of Rome (d. ca. 235), Tertullian (ca. 150–223/5), Clement of Alexandria (ca. 140/150–211/215), Origen (d. ca. 253/54), and Epiphanius of Salamis (315–403).

The difficulties in using the heresiological literature are twofold. The first difficulty is the biased heresiological point of view, for they saw in gnostic teaching only deviations from pure teaching, deviations which were spawned by the devil. The second difficulty is based in the interdependence of the gnostic sources, since the later gnostic authors naturally developed the gnostic conceptions they had received, but rarely added to them more than a few new bits of information. Moreover, the heresiologists had different theories about the historical origin of Gnosis, and these theories determined the way they presented the gnostic materials. Justin and Irenaeus prefer an origin from Judaism, and Hippolytus and Clement prefer an origin from Greek philosophy, while Epiphanius tries to trace back, in a purely schematic way (according to the *Song of Songs* 6:8), eighty heresies to Greek and Jewish schools or sects. In spite of all this, scholarly research in the 19th century (esp. F. C. Baur and A. von Harnack) could construct an objective image of Gnosticism, even if

primary sources were limited and the traditional heresiological perspective dominated.

### C. History of Research

The increase in new original sources has fundamentally altered the state of research in the last few decades. As a result, older notions must and should be abandoned. Together with progress in the critical analysis of sources has come a change in the formulation of questions, which above all had been introduced by the groundbreaking Religionsgeschichtliche Schule (History of Religions School) of Protestant historical theology in Germany at the turn of the century (W. Bousset, H. Gunkel, W. Wrede). This state of affairs reveals another aspect of historiography—the conditioned viewpoint of the investigator. In the 19th century, the gnostic sects were still widely seen as early Christian heresies. Scholarly accounts were influenced by the polemical rhetoric and bias of the Church Fathers, who were responsible for creating such a view. All this changed, however, with the approach adopted by the Religionsgeschichtliche Schule. Church-historical research, as it had been conducted (above all by the influential A. von Harnack), was replaced by religio-historical research as practiced by W. Bousset and R. Reitzenstein. A regional perspective was replaced by one more universal, a theological perspective by a religio-historical perspective. This change in perspective extended even further. Questions were formulated so as to include the new sociological or social scientific, economic, and social-historical approaches, in an attempt to place Gnosis in the context of the ideological history of the Hellenistic world and late antiquity. Gnosis was seen as a part of a broader religio-philosophical protest movement—as a manifestation of the dissolution of the classical world view—and as a fragmentary attempt to master social, political, and ideological complexes by opposing dualities such as “lower and higher,” between East and West (Rome), as was done by other religions. The inclusion of Gnosis in a universal, ecumenical compass strongly shapes present research, at least to the extent that that research is devoted to more than the necessary processing and analysis of sources.

### D. History of Gnosticism

**1. Origins.** According to the view of the Church Fathers, the gnostic movement was introduced by the devil “who hates what is good, as the enemy of truth, ever most hostile to man's salvation, turned all his devices against the church” (Eusebius of Caesarea). The head of the deceivers was Simon Magus (i.e., “the Sorcerer”) known from Acts 8 in the NT. Most of the heresiologists considered Simon as the first gnostic, the founder of the sect or heresy (cf. Justin, Irenaeus, Hippolytus, Epiphanius). His disciple Menander then distributed the gnostic teaching to Saturninus of Antioch and Basilides of Alexandria. With the help of this lineage, the beginning and expansion of Gnosticism was explained for centuries in the orthodox ecclesiastical tradition.

It is very difficult to write the history of Gnosis since we still do not have a text from a gnostic writer which can be considered an attempt at history writing. Only from a careful analysis of the sources themselves, and the relations of the gnostic schools to other movements, can we

reconstruct parts of that history. Most of it, especially the beginnings, are still shrouded in legend.

There is no doubt that the cultural and religious-historical background of Gnosis is closely tied to Judaism, Iran, and the Hellenistic tradition. The area of Syria and Palestine was its home. Many of the writings can be understood as interpretations or paraphrases of the Jewish scriptures (in spite of the polemic against the traditional meaning of those texts). Various figures of the OT (Adam, Seth, Cain, Shem, Enosh, and Noah) function as ancestors, revealers or saviors. The Jewish idea of one God can be presupposed behind the gnostic "Unknown God" (*agnōstos theos*) but clothed in Greek terms; the same is true for the gnostic demiurge (often called a "fool" or, by name, *Saklas*) who is the devaluated creator depicted in Genesis.

Two early Jewish traditions must be mentioned to understand gnostic origins: the apocalyptic and the sapiential (wisdom) tradition. Both are linked together by various threads. The apocalyptic (traced back to the 2d century B.C.E.) is characterized by the belief in the end of the world with God's intervention in favor of the elect. The world view is dominated by a dualistic pessimism with the teaching of two ages (*aeons*). The present age, governed by the devil and his powers, is bound to perish and will be followed by the future age of salvation. Only the man, who "knows himself" to be truly pious, will be saved by God. Apocalyptic is esoteric, revealed wisdom, and the resulting "knowledge" has a direct relation to redemption, because cognition or wisdom is the basis for future salvation. Apocryphal and pseudepigraphical writings are the main types of apocalyptic literature, and which are continued in gnostic texts, sometimes with clear literary links to the non-gnostic apocalyptic classics. Figures like the Adamites and other forefathers of Judaism played a leading role in this type of literature. The same is true for the use of the interpretation of the biblical tradition in gnosticizing allegorical exegesis.

The soteriological concept of "knowledge" also appears in the Dead Sea Scrolls (Qumran), especially in the hymns, where a cosmological dualism of two spirits (or angels) of light and darkness who rule the world is part of that teaching. The pious one lives as a stranger in an evil world ruled by the devil. The "God of knowledge" had created the world but his power is momentarily limited by the "God of ignorance" and his minions. The same idea appears in late Jewish Wisdom Literature, where the female figure called "Wisdom" (*Sophia, Hokhmah*) is not only connected with God and his Law (as a means of creation and for the guidance of Israel) but she also has a redeeming function: the "knowledge" and wisdom of the law guarantee salvation, so that in Gnosticism "knowledge" is saving knowledge. The idea of the "disappointed wisdom" who returns from earth to heaven because error and foolishness worked against her is well known (*1 Enoch* 42). In Jewish philosophical skepticism, the pessimism about the world dominates the whole view of mankind (cf. *Ecclesiastes*, ca. 200 B.C.E.). For the despairing pious it is difficult to recognize any meaning or purpose in the world: there is no longer a fixed order of existence. Chance and fate rule the world. Man, the world, and God are irreparably separated, as the gnostic interpretation of Genesis 1-3 attests. Possibly this "tragic view of life" (G. von Rad) is the

background for the origin of the anticosmic world view of Gnosis and its distinction between the "creator God," who is responsible for the existence of the evil cosmos, and the "God beyond," who is the source and final goal of his sparks of light.

Two other influences can be mentioned which were important for the origins of Gnosis: the Persian (Iranian) Zoroastrian traditions and Greek Hellenistic traditions. Both can be discovered centuries before the rise of Christianity in the language, literature, religion, and art of the Syrian-Palestinian era. Zoroastrian elements are to be found in Jewish apocalyptic traditions: the idea of the eschatological judgment, the resurrection of the dead, the coherent scheme of successive world periods (ages), the ascent of the soul, and, above all, the constant dualism. Surely the Iranian dualism of the two principles was decisively altered in that it was transformed into a substantial contrast of matter (body) and spirit (soul), as was typical in gnostic thought. The Hellenistic influence on the ancient Near Eastern world from the time of Alexander the Great (d. 323 B.C.E.) was of equally great ideological importance. Without the presupposition of Greek language and philosophy, Gnosis is unthinkable. The gnostic systems of the 2d century C.E., which flourished in Alexandria, were influenced by the development of Middle-Platonism especially concerning the problem of the transition from the single divine unity (*theos*) to the infinite diversity of the world (*cosmos*) in the sense of an evolution downwards from spirit (*pneuma*) to matter (*hyle*), resulting in an alienation of the spirit itself. There are a series of themes which Gnosis and contemporary philosophy shared: God and the soul, the "Unknown God," the creation of the cosmos, the origin of evil, and the descent and return of the soul (or spirit). The well-known Platonic duality between spirit and matter, soul and body, God and world, had a significant impact on the development of Gnosis. There are some witnesses for the existence of non-Christian Hellenistic-Oriental literature which are closely connected with the beginnings of Gnosis: the *Hermetic Corpus*, which originated in Egypt, and the "Mysteriosophies" or theologies of the oriental cults (*Naasene Homily*); but the contribution of Orphism is still unclear).

In addition to the ideological and religious factors associated with the Hellenistic climate of syncretism (the spiritualization of ancient religious or cultic practices) and the rise of individualism and esoterism (in contrast to the older religions of the polis with their societal concerns), another important factor in the rise of Gnosis was the economic and social conditions in the urban centers of the Hellenistic Near East. Gnosis was not only connected with the reaction of the orient against the perceived Greek and Roman imperialism and exploitation, but it was also associated with the protest against the social and political situation of the lower classes in oriental communities. As an urban religious phenomenon, Gnosis was part of the social protest movement on the level of religious ideology (mythology). It represented a new ideology which offered a support to the individual, even a certain democratized connection to God through the idea of a divine spark in every human. This provided assistance towards the self-recognition of any individual who had become conscious of his or her autonomy and independence from any

worldly ties, including official religions. The world (*kosmos*) was seen as an area of disorder not ruled by reason (*logos*) as in Greek philosophical thought. Here Gnosis was very different from other religions of this period. Its soteriology was closely linked to a strict attitude of world denial, which is the most radical of its kind in all antiquity. Thus, the modern theory is partly correct which insists that behind this position stands the non-priestly intellectualism of the laity of Jewish provenance, who lost their active function in official political matters. This fits very well into the image of the skeptical wisdom tradition which played an important part in the shaping of Gnostic thought.

**2. Early Gnostic "Schools" and Systems.** As we have seen, Simon Magus (ca. 50 C.E.) was considered the originator of Gnosis by the heresiologists. In Acts 8:9–25 he is described not as a real gnostic, but as a magician who seduced people in Samaria and whom his followers called "The Great Power of God." Not until Justin Martyr (d. ca. 165) was Simon said to have had a female partner Helena, also called "First Thought" (*Ennoia*). Irenaeus (ca. 180) later reported a complete gnostic system for the Simonians, which focused on the redemption of the "First Thought" (represented by Helena) from her captivity in the human material body. It seems that Simon was believed to be a kind of gnostic redeemer and revealer. Further information is given by Hippolytus (*Haer* 6.9–18) with his excerpt from the alleged Simonian treatise "The Great Exposition" (*Apophasis Megale*) which was probably a philosophical interpretation of sayings attributed to Simon by his school in the 2d century. Later Christian literature brings legendary tales about Simon, his school, and his opposition to the Apostle Peter (*Acts of Peter, The Pseudo-Clementines, Epistula Apostolorum*). Very close to the supposed teaching of the Simonian Gnosis stands the Nag Hammadi text *Exegesis on the Soul* (NHC II,6) which is marked by the fundamental gnostic idea of the fall and redemption of the soul.

If it is correct to call Gnosis a non-Christian movement from its origin, then we may be able to discover early relations with Christian traditions before the end of the 1st century C.E. An important feature was the appropriation of the figure of Jesus in the gnostic concept of soteriology in which a historical person was inserted into the gnostic framework of redemption. The first witnesses for this so-called docetic Christology are names like Saturnilus (Saturninus) and Cerinthus (ca. 120/130 C.E.). But the testimony of the NT provides more glimpses of the connections between the early-Christian and early-gnostic traditions and communities. The process which is reflected in some of the NT writers is twofold: the Christianizing of Gnosis and the gnosticizing of early Christianity. The result of both events before the middle of the 2d century is the rise of an orthodox canonical Christianity on the one hand and the elimination of Gnosis as a heresy on the other. At the beginning of this process stands Paul in 1 and 2 Corinthians; the deutero-Pauline traditions in Colossians, Ephesians, and the Pastoral Epistles; and diverse texts such as Hebrews, Jude, 2 Peter (the latest book of the NT: ca. 140), and the extant letters of Ignatius of Antioch (d. ca. 110–117) and Polycarp of Smyrna (d. ca. 165). The Revelation of John (ca. 95) mentions the gnostic sect called the Nicolaitans in Asia Minor (Rev 2:6, 15).

A special case is the four Johannine writings (John, 1–3 John) which probably originated in Syria about 100–110 C.E. Here we have an understanding of Gnosis that had been adapted to Christian tradition and that can be seen as an early and unique type of Christian Gnosis. Some of its features include dualistic terminology, Christ as a heavenly messenger who brings division within humanity, "knowing" is synonymous with "believing," spiritualized or realized eschatology, and the community as the redeemer's "own ones."

**3. Great Gnostic "Schools" and Systems of the 2d Century.** The main centers of Gnosis in the 1st century had been Syria and Asia Minor. In the 2d century they were Alexandria (Egypt) and Rome. The question is still open whether there existed only one "system" of early Gnosticism or several at the same time, as we find in the 2d century. A certain plurality, adapting to local situations and traditions, seems to have existed from the beginning. But within this plurality one finds an interest in the same topics such as cosmology, soteriology, Christology, eschatology, and ethics. Certain basic ideas were elaborated at an early date and by the 1st century were already formulated into discrete theological systems. Among these were ideas such as the "Unknown God," the female counterpart of God called Sophia (Wisdom), the demiurge with the planets (Hebdomad) and creative powers, the fall of the divine soul or spirit into the world and the human body of Adam (as the first man), the sending of heavenly figures (e.g., Seth or Baruch) or abstract entities (Sophia, Ennoia, Logos) to rescue the divine spirit (as part of God) from the matter, the "ascent of the soul," the destruction of the cosmos, and, at the practical level, the personal discipline of distancing oneself (*enkrateia*) from the world.

The 2d century is the period of the great gnostic systems and the flourishing of Gnosticism (this term is assigned to this period in particular). The first significant teacher of Gnosticism is Basilides, who was active under the emperors Hadrian and Antoninus Pius (117–161 C.E.). He lived in Alexandria (Egypt) and published several writings, a gnostic composition of the gospel, and exegesis (*Exegetica*) in twenty-four books, and psalms. Only fragments of them have been preserved; also lost is the "Refutation of Basilides" by Agrippa Castor. The school of Basilides was, after his death, handed over to his disciple or "son" Isidore, who also wrote several books, of which three are known but not preserved ("On the Grown Soul," "Ethica," "Expositions of the Prophet Parchor"). The system of Basilides is not easily reconstructed because the primary sources are very fragmentary. From the heresiologists we have two very different reports about Basilides' system: a dualistic version (Iren. *Adv. haer.* 1.24) and a monistic and more Greek philosophical interpretation (Hipp. *Haer.* 7.20–27). It is possible that the system, as Hippolytus describes it, is a fair description of a later stage of Basilides' system, but it may derive from Hippolytus' own misunderstanding or reinterpretation. According to Irenaeus and the few authentic extant fragments (patristic quotes), Basilides taught an emanation of beings and angels from the "Unbegotten Father," at first six spiritual powers which formed the Pleroma: mind (*nous*) or Christ (*Christos*), word (*logos*), prudence (*phronesis*), wisdom (*sophia*), and power (*dynamis*). From the last of these six emanated 365 angelic

beings in an unbroken, descending process, each creating a "heaven" as its habitat. These 365 heavens correspond to the world year or "aeon." The lowest class of the powers was led by the demiurgic God of the Jews called Abrasax (= 365) who created the physical world (*kosmos*) and men. In order to rescue men from the tyranny of this demiurge, the "Father" or "Unknown God" sent his Christ-Nous, who appeared in the divinely adopted human being Jesus of Nazareth. Simon of Cyrene, not Jesus, was crucified, so that the Christ-Nous could escape and return to the Father without the knowledge of the evil powers. Only the soul, never the devalued physical human body, is the object of gnostic soteriology. The "faithful" or "pneumatics" are alien to both the cosmos and humankind, as they are of supernatural origin. The accepted mode of behavior is the ascetic life, and only sins committed "involuntarily and in ignorance" will be forgiven.

Although Marcion of Sinope (d. ca. 154–160) was not strictly a gnostic theologian, his significance in early Christianity is best understood in relation to gnostic thought. According to Irenaeus, Marcion had contact with a Syrian gnostic teacher named Cerdo (in Rome ca. 136–142) and his famous disciple Apelles, and later joined gnostic circles in Alexandria. Apart from Marcion's great importance on the development of the NT canon, the later development of Pauline theology, and the foundation of a "heretic" church as well, he is part of the history of Gnosis in the 2d century. The supposed absolute separation between the Jewish God of Law and the gracious Christian God of salvation and love is not only an extreme interpretation of the Pauline theology, but reminds one of the gnostic antithesis between the foolish creator (demiurge) and the "Unknown God." The Jewish God of creation in Marcion's system corresponds fully to the foolish creator God of the gnostics, despite the fact that the latter was understood to be related to the highest being (God) as a fallen product of the spiritual universe (pleroma), which is not the case in the system of Marcion.

Marcion's exegetical protest against the OT, his negative valuation of the world and matter, and the ascetic consequences which he drew from that belief, are very much in agreement with gnostic attitudes. Different, however, was Marcion's belief that man is totally corrupt, not only in body but also in soul. To him salvation means a transformation of the soul (which is not a fallen, divine element as in Gnosticism).

The last great school of Gnosticism can also be dated to the first half of the 2d century. Its founder was a Christian teacher named Valentinus (died ca. 160–175). Very little is known about his life. He was probably born in Egypt and educated in Alexandria where he converted to Christianity (apparently in a gnostic form). About 140 he went to Rome and was active there for many years, involved in church affairs and founding an influential school. As in the case of Basilides, only few fragments of his work have been preserved: most of these are sermons, hymns, and letters. His teaching was spread in this form as well as by oral instruction. Only one theological treatise is attributed to him: *On the Three Natures* (the *Tripartite Tractate* of the Nag Hammadi Library [= NHC I, 5]) is not identical with this work, although it is related to the later Valentinian school). Divine revelation, it is said, had been the origin of the

teaching of Valentinus. It may be that this tradition is one of the reasons that the original and complete system of Valentinus has not been preserved. No fewer than six more or less complete reports of the Valentinian system are to be found in the heresiological sources. No doubt there existed a basic doctrine behind them. Fundamental is the idea of emanation from the primordial beginning: the divine "depth" (*bythos*). The pleroma consists of at least thirty aeons arranged in fifteen pairs and called with different names. Most important are only the two first tetrads, which bear the following names: "primal-depth" (*bythos*) and "thought" (*ennoia*), also called "grace" (*charis*) and "silence" (*sige*); then "mind" (*nous*) or the "only begotten" (*monogenes*) and "truth" (*aletheia*); next comes "word" (*logos*) and "life" (*zoe*); then "man" (*anthropos*) and "church" (*ekklesia*). The last aeon is named "wisdom" (*sophia*), which plays an essential role in the process of the creation of the physical world by its "ignorance" or "error." The events in the pleroma have consequences for all that exists outside of it. In order to pacify the pleroma disturbed by the fall of Sophia, the two aeons "Christ" and "Holy Spirit" are created, and it is "Christ" who brings the unbridled Sophia back to the harmony of the pleroma. The passionate desire (*enthymesis*) of the restored Sophia is separated from her to the regions outside of the pleroma, and becomes the "lower Sophia" or Achamoth (Heb "wisdom"). To remove the "sufferings" of this lower Sophia, "Jesus Soter" is brought forth by all aeons of the pleroma. He put her "affects" in order through "gnosis," but her "passions" are separated and become the elements of the future creation of the cosmos. The psychic elements are the origin of the demiurge, who with his powers resides in the "place of the midst," that is, between the "Ogdoad" or Achamoth and the material world (earth). The spiritual elements consist of the "seed of light" (*pneuma*) and represent the pneumatics. The material world, including man, is created out of material and psychic substances.

The system of Valentinus is marked by an original combination of former gnostic speculations (especially of the so-called "Barbelo-Gnostic" systems, as in the *Apocryphon of John*) and Greek platonic philosophy; Valentinianism is therefore often characterized as the apex of Gnosticism before Manichaeism (which first developed in the mid-3d century). The Valentinian school was the most influential and the greatest of Gnosticism. Some of Valentinus' disciples were distinguished intellectuals, vehemently attacked by the Church Fathers. The division of Valentinianism into two different schools, which they themselves called the "Anatolian" (Oriental) centered in Alexandria, and "Italian" (Western) centered in Rome, was a significant development. The difference between them centered on christological issues. The Oriental school was active in Egypt, Syria, and Asia Minor, the old places of Gnosis. To it belonged the well-known gnostic Marcus, who changed the system of his teacher Valentinus into "numerical speculations" and "letter mysticism," and who practiced special cultic ceremonies; and Theodotus, some of whose writings have been transmitted in a fragmentary form by Clement of Alexandria. The "Italian School" was dominant in Rome and was especially opposed by Irenaeus of Lyons (Gaul). Its representatives included Ptolemy, whose system is reported in the polemic of Irenaeus; and

Heracleon, who wrote the first commentary on the Gospel of John, used by Origen and Clement. Evidence for the existence of the Valentinian Gnosis also comes from the 3d to the 5th century, particularly from the area of Egypt, Syria, and N Mesopotamia.

**4. Later Developments.** Strictly speaking, the productive period of western Gnosis ends with Valentinus and his school. Later gnostics and their works had nothing essentially new to contribute to the development of Gnosis. Writings like *Pistis Sophia*, *The Two Books of Jeu*, and parts of the Hermetic corpus and the Nag Hammadi library belong to this late period. Epiphanius reported on some sects (e.g., Archontics and Borborians) which belong to the later period of Gnosticism.

The aftereffect of Gnosis—and also of organized Gnosticism—is part of the religious history of late antiquity and the Middle Ages, and also of the history of philosophy into the modern period. Already the German classicist J. G. Herder saw in Gnosis the first religious philosophy in Christendom, and he realized that the shaping of Christian theology since the 2d century is unintelligible apart from questions raised by gnostics. The theological agendas of orthodox thinkers like Irenaeus, Clement of Alexandria, Origen, Lactantius, and Augustine (himself a convert from gnostic Manichaeism) were largely determined by issues introduced by their gnostic opponents. Questions concerning cosmology, creation, and salvation, and christological issues concerning the divine Savior Christ in relation to both God and to the human Jesus of Nazareth, and the relations between presumed antitheses such as faith and knowledge, death and resurrection, body and spirit, good and evil, tradition and interpretation—all are themes upon which the gnostics elaborated and, because they often diverged far from the consensus of Christian tradition, provoked an intense response.

The heresiologists not only evaluate gnostic concepts negatively through various attempts to discourage acceptance of gnostic belief and practice, but also reflect gnostic concepts positively by their response to those tendencies in their own alternative programs. More than just the ideology of the gnostics was influential, for in practical social matters the foundations of the gnostic community were of existential importance for the development of the Orthodox Church. This is seen, for example, in the organized community structure of authority (the episcopal system), the exclusion of women from community leadership (especially advocated by Tertullian), and the integration of the laity into the legal and hierarchical institution of a state church.

The Church almost never escaped from the "gnostic danger." As the gnostic systems of the 2d and 3d centuries lost their influence, there arose in Mesopotamia the first gnostic world-religion: Manichaeism. Even today this geographical region, the ancient seed-bed of Gnosis, remains the home of the only remaining gnostic community, the Mandaean (see MANDAEISM). Gnosis, Manichaeism and Hermeticism have also had significant influential aftereffects in the history of Islamic heresies (Shi'ite extremism). In the same way gnostic ideas extended into the Christian Middle Ages (Bogumils and Albigensians), into the history of world-rejecting mystical groups (e.g., kabbalism), and

up to modern theosophical and anthroposophical occultic movements.

KURT RUDOLPH

**GOAH (PLACE)** [Heb *gō'ātā*]. An area in the vicinity of Jerusalem mentioned in connection with Jeremiah's eschatological vision of the restored and resanctified Jerusalem (31:39). Its location is unknown, although the context of the biblical passage suggests that it was likely S and E of GAREB, but presumably still N of the Hinnom valley and W of the Kidron valley. In Jeremiah's vision, the sanctity of the city would extend to include (presumably) the Hinnom valley and certainly the Kidron valley; thus it is possible that Goah was opposite one or the other of the valleys. The RSV form of the name, "Goah," reflects a reconstruction of the name in its absolute form, without the locative *-ā* and the feminine construct *-t-*.

GARY A. HERION

**GOAT, GOATHERD.** Goats are cloven-hoofed ruminants, usually with hollow horns that sweep backwards, although some may have corkscrew or scimitar horns. They are gregarious, strong, and surefooted creatures. The domestic goat (*Capra hircus mambrica*) is thought to have derived from the wild goat (*C. aegagrus*) of W Asia. The Hebrew names used for goat do not define the various species; the general Semitic word and most frequently used in the OT is *'ēz* (Akk *enzu*, Ar *'anz*, Syr *'ezzā*; Gen 15:9; 27:9, 16). Another common name *šā'īr* ("shaggy," "hairy one"), appearing many times, is a he-goat (Gen 37:31; Lev 4:28; 16:10; Ezek 43:22), but occurs in certain passages as a demonic figure, translated "satyrs"/"devils" (Lev 17:7; 2 Chr 11:15; Isa 13:21; 34:14). The *'attūd* (Akk *atūdu*) also refers to rams or he-goats (Gen 31:10, 12). The *gēdī* is a young goat, a kid (Gen 27:9; Judg 6:19). Both *šāpīr*, found in later OT material (2 Chr 29:21; Dan 8:5, 8, 21; Ezra 8:35), and *tayīš* (Gen 30:35; Prov 30:31) mean he-goat. The *'aggō* appears only once (Deut 14:5) and has been translated as "wild goat" or "ibex," but the identification is questionable. The *zemer* also is found only in Deut 14:5 and has been identified as the aoudad or Barbary sheep, or the mouflon wild sheep. The word has been translated "chamois," but this animal was apparently never a native of Palestine. The horns of the *zemer* were possibly used for musical instruments. The *yā'ēl* (1 Sam 24:3—Eng 24:2; Psalm 104:18; Job 39:1) is translated "wild goat" (*C. Sinaitica*), or was possibly the Nubian ibex (*C. ibex nubiana*).

Like the sheep, the goat was widespread and valuable in ANE society, and is presumably included under the gen-

eral OT term for "flocks" (*šō'n*, Gen 4:2, 4; 12:16; 13:5; Exod 10:9; Ps 144:13; Job 1:3; 42:12). Jacob's gift of over 530 animals to Esau included "two hundred she-goats and twenty he-goats" (Gen 32:14); Nabal possessed a thousand goats (1 Sam 25:2, 3), and Jehoshaphat received tribute of "seventy-seven-hundred he-goats" (2 Chr 17:11). The goat was domesticated by the 7th millennium B.C. and was kept mainly for its milk (Deut 32:14; Prov 27:27; Bodenheimer 1960: 209). As food, the goat was permitted by the Torah (Lev 7:23; Deut 14:4), in fact, the meat of a kid was highly prized (Gen 27:9; Judg 15:1; 1 Sam 16:20; Luke 15:29). David's encampment at Ein Gedi ("fountain of the goats") likely provided his men with ample food as well as a choice hiding place (1 Sam 24:1—Eng 23:29). The wool of the various species produced different kinds of cloths, some coarse and rough, but others provided superior mohair and cashmere garments (cf. 1 Sam 19:13; Jonah 3:6; Heb 11:37). Because of its toughness and resistance to heat and water the hair was used to make tents, such as the present-day bedouins' tents (cf. Cant 1:5), and also twine. The curtains of the Tabernacle were made of goat's hair (Exod 26:7; Cant 1:5). The hair was generally black (Cant 1:5), but spotted and speckled colors were also known (Gen 30:32). The skins were used to make leather, and of great importance was their use as "bags" for the storage and transportation of liquids such as wine, oil, water, and milk (Gen 21:14; Josh 9:4, 13; Judg 4:19; 1 Sam 1:24; Ps 119:83; Mark 2:22; Luke 5:37–39).

The goat is listed early in the OT as an acceptable sacrifice (Gen 15:9). The animal was equal to the sheep for the Passover, and was included under the common term for "lamb" (*seh*; Exod 12:5). The various offerings enumerated in Leviticus include the goat (Lev 1:10; 3:12; 4:22–24, 27, 28; cf. Num 15:24, 27; Lev 5:6; 9:3, 15). At the presentation of first fruits there was a prohibition against "seething a kid in its mother's milk" (Exod 23:19; 34:26; Deut 14:21), an injunction either against some Canaanite rite, or possibly, a cruelty (Gaster 1950: 423; cf. Lev 22:28; Deut 22:6; cf. Bodenheimer 1960: 214–15; Keel 1980). Two goats were selected for the Day of Atonement ritual: one for a sin offering and the other consigned "to/for Azazel" (Lev 16:6–26); Azazel was either the goat on which sins were carried into the wilderness ("scape-goat"), the wilderness itself, or a desert demon.

The nature of the goat lent itself to symbolism, but in comparison to sheep imagery, the number of metaphorical references in the Bible is limited. Goats are destructive to cultivated areas, and with their beetling brow and thrust-out lower lip they could easily represent power and belligerence. The common word for goat (*'ēz*) is derived from *'āzaz*, "to be strong." Their overbearing temper and aggressiveness required the shepherd to keep close watch over the flocks so that the sheep would not be harmed. Israel's leadership is compared to he-goats who have harassed the sheep and the reason given was the absence of a shepherd to watch over them (Zech 10:3). In the judgment against evil shepherds God is said to "judge between sheep and sheep, rams and he-goats" (Ezek 34:17). The "leaders of the earth" in Sheol are symbolized as he-goats (Isa 14:9). Israel is told to go out from Babylonian exile "as he-goats before the flock" (Jer 50:8). In Proverbs the he-goat is given regal status (30:29–31). Israel's army is

compared to "two little flocks of goats" (1 Kgs 20:27). Alexander the Great is described as a he-goat with a conspicuous horn between his eyes (Dan 8:5, 8, 21; cf. 8:23). Because of the dark and silky color of the goat, a maiden's flowing hair is likened to a flock trailing down Mount Gilead (Cant 4:1; 6:5).

The use of the goat was widespread in the art of Mesopotamia. Numerous figurines, plaques, clay models, and glyptic objects show that the animal was used for many different motifs: a serpent lying across a goat's back with its head between the horns is novel, but a common scene is that of one or two goats rearing on a sacred tree which grows out of a mountain (see Van Buren 1930: 171-76; Buchanan and Hallo 1981: *passim*; Frankfort 1954: pls. 28, 29, 67, 68, 192; Keel 1980: 72, 96, 104, 115). The ibex is common in glyptic art, and in Mesopotamian literature symbolized the sweet underground water (see Jacobsen 1976: 111). Goat and rams horns were a frequent motif in the Asian steppes and the goat was a popular symbol for royalty in ancient Persia.

In the OT the goatherd is not distinguished from the usual term for shepherd (*ro'eh*). Both sheep and goats were normally herded in the same flock. In the Song of Songs the shepherdess is spoken of as one who shepherded her kids (Cant 1:8).

JACK W. VANCIL

**GOB** (PLACE) [Heb *gōb*]. The site of two battles against the Philistines during the reign of David (2 Sam 21:18, 19). Gob appears twice in a series of four episodes in which heroes from David's ranks defeated Philistine champions (2 Sam 21:15-22). During the first encounter at Gob, Sibbecai slew Saph (v 18), while during the second, Elhanan killed Goliath (v 19; but see the parallel in 1 Chr

20:5, in which Elhanan is alleged to have killed Lahmi the brother of Goliath). Gob does not appear in the parallel account in 1 Chr 20:4-8. In Chronicles, Gezer is presented as the site of the encounter between Sibbecai and Saph (v 4, where the latter name is given as Sippai), while there is no place mentioned as the site of the encounter between Elhanan and Lahmi (v 5). Scholars have been divided on the place of Gob in the biblical traditions. Following a suggestion by Wellhausen, Eissfeldt (1943: 120-22) emended the name of the site of the first of the four episodes from Nob to Gob (2 Sam 21:16), thus having three of the four episodes take place at Gob. Then, basing himself on the variant "Gezer" in 1 Chr 20:5, he located the site of Gob in the vicinity of Gezer, identifying Gob with Gibbethon (M.R. 137140; identified with Tell el-Melat, 4 km from Gezer), known as a point of conflict between the Philistines and Israel in the late 10th and early 9th centuries B.C.E. (1 Kgs 15:27; 16:15; see also Smith *Samuel* ICC, 377-78 and Williamson *1 and 2 Chronicles* NCBC, 141 who support the primacy of the reading "Gob" as against Gezer in 2 Sam 21:18 on the basis of its being the more difficult reading, and on an assumption that the Chronicler substituted the familiar name Gezer for the unfamiliar Gob). Opposed to this view is that of McCarter (*II Samuel* AB, 447-50), who accepts the reading "Gob" only in the account of Elhanan's battle with Goliath (2 Sam 21:19). In 2 Sam 21:18, McCarter follows 1 Chr 20:4 in placing the battle at Gezer. In doing this, he finds some support in the Lucianic version of the name in question, *gazeth*. He explains both the MT "Gob" and the LXX Codex Vaticanus variant "Gath" as anticipatory of vv 19 and 20, respectively (see Myers *II Chronicles* AB, 141 in support of Gezer in 1 Chr 20:4).

### GOD IN THE OT

There is no treatise on God in the OT, no equivalent of the tract *De Deo Uno* (concerning the one God) of medieval and classical theology, no discussion of the "idea of God." The existence of God is taken for granted. The Psalmist proclaims: "The fool says in his heart, 'There is no God'" (Pss 14:1; 53:2—Eng 53:1). The God of the OT is a God whom one experiences. One believes in God; one reflects on the present situation, on what led to it, on the distant past, and one knows that God is at work in this process. The OT writers do not prove the existence of God scientifically for the modern scientist, philosopher, or historian.

They know from experience that God exists. They reflect and are convinced that God initiates, sustains, and governs the universe, and that he directs history. They do not know an inert God.

### A. Toward One God

The Hebrew Bible and its final expression of a one God is the end result of a struggle for God that has been long and complicated: "The Bible probably should not be thought of as a monotheistic book but as monotheizing literature. There is no serious treatise in it arguing monotheism philosophically. But every bit of it monotheizes—more or less well" (Sanders 1984: 51). This process of monotheizing came to an official end with the editing and crystallization in writing of the record of the struggle for the one God. The Chronicler and the book of Daniel in its present form represent the last stage. Those who followed strictly the first commandment (Exod 20:2–6; Deut 5:6–10) and the *Shema* (Deut 6:4–9) were a minority. The religious history of Israel is the story of constant falling away from the one God. Yet the one, exclusive, and only God is the center of true Israelite religion.

**1. The Struggle for One God.** The Hebrew Bible was some eight hundred years in the making and bears many a print, faint and firm, of Israel's struggle with the Canaanite religion and its pantheon with which it lived side by side. There are many stages in the process that lead to the monotheism of Deutero-Isaiah. The journey was not along a straight path. But the God of the Hebrew Bible is ultimately a one and only God; there is no God beside him.

God in popular Judean or Israelite religion is not necessarily the God of the definitive Hebrew Bible, though this "popular God" is important for understanding the process of refinement. One can speak of two religions in Israel: (1) the official one, concerned with the one God and his law, represented by the priests and prophets, refined, speaking a language that the people do not know, and (2) the popular one, crass, ignorant, with emphasis on the periphery and with practices outside official control. The official or minority religion is expressed in the Priestly writing,

Deuteronomy, the Deuteronomistic history, the positive proclamation of the prophets, and the Psalmists; the popular attitude is reflected in much of Samuel-Kings, the prohibitions of Deuteronomy, and the polemics of the prophets. The people, common folk and high officials alike, substituted Canaanite gods and worship for the one true God. Hosea, for example, gives a compendium of two centuries of false worship: "they have turned to raisin cakes" (3:1); "they have played the harlot" (4:11–14; 9:1); "they turn to Baal" (7:16); "with silver and gold they made idols . . . a workman made it, it is not God" (8:4–5); "Ephraim has multiplied altars for sinning" (8:11); "Israel has forgotten his Maker" (8:14); "Ephraim . . . incurred guilt through Baal and died" (13:1). Polytheism and forms of idolatry became virtually official both in the N (2 Kgs 17:7–18) and in the S (2 Kgs 18:4—the bronze serpent; 2 Kgs 21:1–16—Manasseh). God, who had brought the people out of Egypt, had been pushed aside. The idols of the majority had, on the popular level, prevailed over the one true God of the minority. The people had forgotten that it is YHWH, not Baal, who blesses, that is, gives fertility and prosperity to humans, animals, and the fields (cf. Jer 14:22).

**2. Dtn-Dtr and One God.** The God of Israel is a jealous God, *ʔel qannaʔ*, who tolerates no other (cf. Exod 20:5; Deut 5:9; Deut 4:24; 6:15; 9:7b–10:11). He has an exclusive claim on Israel, though other peoples may go their way: "for all the peoples walk each in the name of its god, but we will walk in the name of the Lord our God for ever and ever" (Mic 4:5). But a stiff-necked people (Exod 32:9; 33:3, 5, etc.) murmured against its God (Exod 16:2; Num 11:2; 12:1; 14:2, 26, etc.) through forty years in the wilderness even to the edge of the promised land, so that the anger of the Lord blazed up against them (Exod 32:11; Num 11:10, 33, etc.). These traditions provided material for the Deuteronomic and Deuteronomistic writers. These writers contemplate Israel encamped on the threshold of the promised land, led there from Egypt by the one God, and put under obligation to him alone: "YHWH is your God, YHWH is one" (Deut 6:4). Because he is unique and has led the people from Egypt, he can command love and demand that the people serve him with an undivided heart (*kōl lēb*), with their lives even unto death (*kōl nepēš*), and with all their possessions (*kōl mēʔod*; Deut 6:5). The God of Deuteronomy is the God of the first precept of the Decalogue. God's blessing will continue to be effective both in increase of descendants and in prosperity in the land. But it is now conditional on adherence to the one God and his commandments (Deut 31:15–20). The Deuteronomic Code imposes at the least a strict monolatry.

The Deuteronomist is even stricter. God is both near and remote, merciful and demanding: "For what great nation is there that has a god so near to it as the Lord our God is to us whenever we call upon him?" (Deut 4:6); "For this commandment which I command you this day is not too hard for you, neither is it far off . . . but the word is very near you; it is in your mouth and in your heart, so that you can do it" (Deut 30:11–14). The people must not confuse their God with "the sun and the moon and the stars and all the host of heaven" (Deut 4:19). God controls these celestial bodies, but he is not in them, just as he is not immanent in the forces of nature. To stress the unique-

ness of God and the uniqueness of Israel's calling by God, the Deuteronomist, through the person of Moses, looks back into the mystery of creation: "For ask now of the days that are past, which were before you, since the day that God created man upon the earth, and ask from one end of the heaven to the other, whether such a great thing as this has ever happened or was ever heard of. Did any people ever hear the voice of a god speaking out of the midst of a fire, as you have heard, and still live?" (Deut 4:32-33). The reason for God's action is that "he loved your fathers and chose their children after them" (Deut 4:37). And the consequence?: "Be sure to take to heart that the Lord is God in heaven and on earth below; there is no other. You shall keep his statutes and his commandments which I give you today" (Deut 4:39-40). Love of God and the keeping of his commandments are inseparable correlatives in Deuteronomy. Because God is the people's rescuer, he can command this love; because "to the Lord your God belong heaven and the heaven of heavens, the earth and all that is in it" (Deut 10:14). He can require of the people "to love him, to serve the Lord your God with all your heart and with all your soul, and to keep the commandments and statutes of the Lord" (Deut 10:12-13). A key theme of the Deuteronomistic History and theology is sounded in 1:8: "I have laid the land open before you." It is God and he alone who has accomplished everything. He alone has brought the people to this stage of their history as they stand between promise and fulfillment. Deut 1:6-3:29 is not just historical retrospect. It is preached history which demands that the people learn from what their God has done.

The story of the people of Israel, as the Deuteronomist interprets history, is the story of the violation of the first commandment by the worship of "foreign gods." The standard statements in Judges formulate this theological interpretation of history (2:11-19; 3:7-11; 10:6-16). God is said to be angry: "So the anger of the Lord was kindled against Israel" (Judg 2:20). The whole history of the people under the monarchy was a continual falling away from God so that the Deuteronomist could say at the demise of the N kingdom that "the Lord was very angry with Israel, and removed them out of his sight; none was left but the tribe of Judah only" (2 Kgs 17:18). But Judah fared no better in the end: "for because of the anger of the Lord it came to the point in Jerusalem and Judah that he cast them out from his presence" (2 Kgs 24:20).

**3. The One God.** It is Deutero-Isaiah who expresses most clearly that Israel's God is one and unique, in short, monotheism in the strict sense. There are twelve verses in particular where this prophet asserts the uniqueness of Israel's God (45:14-25): "God is with you only, there is no other" (v 14a); YHWH . . . *he* is God" (v 18a); "I, YHWH, and there is no other" (v 18d); "I YHWH" (v 19c); "Was it not I, YHWH, and there is no other God besides me" (v 21c); "none apart from me" (v 21d); "for I am God (*ʾēl*) and there is no other" (v 22b); "only in YHWH" (v 24a); "in YHWH" (v 25). These nine monotheistic assertions have a cumulative effect. With them is found also the word "save," which occurs six times as a noun/participle or a verb. "Save" does not have here the overtones of the Christian theology of the NT. It is rendered better by "rescue," or an equivalent: "God of Israel; rescuer" (v 15);

"Israel is rescued by YHWH with a rescue that is forever" (v 17); the pagans invoke "a god who does not rescue" (v 20c); YHWH is a "god who delivers and rescues" (v 21d); the pagans are invited to "turn to me and be rescued" (v 22a). YHWH will vindicate his people in the eyes of their enemies, who will be brought to acknowledge that it is the God of Israel who acts.

The God of Israel is immeasurable and unteachable (40:12-17), incomparable (40:18; 46:5, 9); he stretches out the heavens (40:21-22; 42:5; 44:24; cf. Ps 104:2b); he is apart, the holy one of Israel (41:14, 16, 20; 43:15; 45:11; 48:4; 49:7); he is with his people (41:10; 43:2); he brings joy, comfort, and assurance (51:3, 6, 8, 11, 16; 52:10, 12; cf. also 41:8-13, 14-16; 43:1-4, 5-7; 44:1-5). It is "I" who act "that people may see and know, may consider and understand together, that the hand of the Lord has done this, the Holy One of Israel has created it" (41:20). There are, therefore, no other "gods." To speak of them is to speak either of nothing or of the ineffective work of human hands (40:19-20; 41:6-7; 41:23-24, 29; 42:17; 43:10; 44:9-20; 46:1-13; 48:5). In the middle of the 6th century B.C.E., Deutero-Isaiah has proclaimed monotheism in its fullness.

## B. God Ever Active

**1. God Who Creates and Blesses.** The Hebrew Bible begins with a clear distinction between God and "not-God," between creator and created. "In the beginning God." The writer presupposes creation and God as creator and has no need to prove it. Creation by God is simply accepted. It is not an article of faith, as in the Christian creeds, inasmuch as it was never contested. The history of the theology of creation in Israel is another matter (cf. Westermann 1978: 1-10; Saggs 1978: 30-63; Anderson 1984; Day 1985: 1-62). The Bible stands under God and his creative word which dominates the priestly recitation of creation. The refrain, "and God said," occurs eight times in Gen 1:3-27. There is the word, the formula of command, and the event. God's word is fulfilled in an event immediately following it and in precise accordance with what is said. There is an inner connection between God's word and the event. God's word is event. What God has said must come to pass. "By the word of the Lord the heavens were made, and all their host by the breath of his mouth" (Ps 33:6). We read the same in Ps 147:15-20 as well as in the concluding passage of Deutero-Isaiah:

For as the rain and the snow come down from heaven,  
and return not thither but water the earth,  
making it bring forth and sprout  
giving seed to the sower and bread to the eater,  
so shall my word be that goes forth from my mouth;  
it shall not return to me empty,  
but it shall accomplish that which I purpose  
and prosper in the thing for which I sent it  
(Isa 55:10-11).

Creation by word has a long history in the ancient Near East. "The creative power of the word underlies all Mesopotamian religious literature" (Jacobsen 1976: 15; cf. Dürr 1938; Koch 1965). The word of God often appears under the image of a natural and cosmic power through which

the voice of God comes; it is the power that creates and maintains in existence. Psalm 29 repeats *qôl YHWH*, "the voice of YHWH," seven times; it may be rendered as well by "the word of YHWH."

The priestly writer introduces God who was there before creation: "from everlasting to everlasting thou art God" (Pss 90:2; 93:2), God who speaks and whose word must issue into event, God who acts and whose action must issue into order. For the priestly writer, as for Deutero-Isaiah, to conceive of God as one who creates chaos or preexisting unordered matter is to conceive strict nonsense; for both writer and prophet, creation and chaos are incompatible: "For thus says the Lord, who created the heavens—he is God! who formed the earth and made it—he established it; he did not create it a chaos (*tôhû*), he formed it to be inhabited!" (Isa 45:18; cf. Psalm 136). The God who creates is, in Deutero-Isaiah, also the God who redeems. He redeems or rescues precisely because he is creator, the word to create (*bārā*), used only with God as subject in the OT (49 times), occurs 17 times in Deutero-Isaiah (40:26, 28; 41:20; 42:5; 43:1, 7, 15; 45:7 (twice), 8, 13, 18 (twice); 48:7; 54:16 (twice)). God, the creator and sustainer, is the theme of Psalm 104 (linked closely with Genesis 1) and of the hymns of the praise of the creator which are the basis of Job 9:5–14; 26:5–14).

The God who creates is the God who blesses. He blesses all living creatures, animal and human (Gen 1:22, 28), so commanding them to exercise the dynamism to reproduce and increase conferred on them in their being created. The blessing is effective through time, in the genealogy of Genesis 5 (it is renewed after the flood, Gen 9:1, 7), and in space, in the spread of the human race over the earth through Noah's sons (Genesis 10), and in the line through Shem that leads to Abraham. The formula of Gen 1:28 and 9:1, 7, is taken up again in 35:11 when the promise is confirmed to Jacob. "Blessing is a continuing activity of God that is either present or not present" (Westermann 1978: 4).

**2. God Who Calls the Fathers.** Blessing stands at the head of the story of the patriarchs and permeates it: "Now YHWH said to Abram: Go your way from your land and your kindred and your father's house to the land that I will show you. And I will make you a great people, and I will bless you, and I will make your name great, so that you will be a blessing. I will bless those who bless you, and him who despises you, I will curse. And so all the clans of the earth shall find blessing through you" (Gen 12:1–3). The writer looks back from the period of the later monarchy on the history of his people and links history with God's unseen action of blessing. The blessing achieves its effect in history in descendants beyond counting: "if one can count the dust of the earth, your descendants also can be counted" (Gen 13:16; 28:13); "look toward heaven and count the stars, if you are able to number them" (Gen 15:4; 22:16; 25:3); "I will greatly multiply your seed" (Gen 16:10; 17:2, 19; 22:16; 26:3, 24). The descendants will be as the "sand which is on the seashore" (Gen 22:16). Abraham and Jacob are God's instruments by which "all the clans of the earth shall find blessing" (Gen 12:3; 22:18; 28:14). "The significant place of the call of Abraham simply serves to underscore the point being made here. The popular understanding of the God of the Bible often

conceives of the deity as a God of love and wrath, a God of mercy and judgment, as these were the two parts of the character of God or the two sides of the divine activity and purpose. The call of Abraham helps to make clear that the God of biblical faith, in contrast to such a popular notion, is clearly bent toward blessing and mercy toward human creatures. Judgment takes place when the loving purposes of a compassionate God are thwarted or opposed. But the divine way and purpose are not any less loving or set for blessing. When Yahweh sent Abraham out, it was to bring about blessing, not curse. That is the good report which the Bible transmits to each generation" (Miller 1984: 475).

**3. God Who Rescues. a. From Egypt.** The reflective theologians of Israel saw God's blessing at work among his people in Egypt (Exod 1:7). It is the effect of the blessing that gives rise to the oppression (Exod 1:8–14). God is a God who responds. He saw, he knew, he remembered his assurance (*bērit*) given to the patriarchs, and he intervened (Exod 2:25; 3:15–17). The God who rescues or delivers or saves is identified with the God of the fathers (Exod 3:1–6; 6:2–8). He is described as "the Lord your God, who brought you out of the land of Egypt, out of the house of bondage" (Exod 20:2; Deut 5:6). This became Israel's confession of faith (Deut 6:20–25; 26:5–9; Josh 24:2–13).

Who is this God who rescues? He is symbolized by the bush which burns but is not consumed (Exod 3:2). He is there, ever active, indestructible. He says *'ehyeh 'immāk*, "I will be with you" (Exod 3:12); his name is *'ehyeh 'āšer 'ehyeh*, "I am who I am"; and he instructs Moses to say "*'ehyeh* (I am) has sent you" (Exod 3:14). The God who rescues is the God who, as in the patriarchal stories, acts when, where, and how he will. It was this God, YHWH, who, in the belief of Israel, was the God of the beginnings; so that it was him, YHWH, whom people invoked in the primeval period (Gen 4:26). He cannot be contained by image, shrine, or territory. He is always present (Exod 33:12–16). The presence may be symbolized "by day in a pillar of cloud to lead them along the way, and by night in a pillar of fire to give them light" (Exod 13:21); "but . . . you cannot see my face; for man shall not see me and live" (Exod 33:20), even though the elders "saw the God of Israel" (Exod 24:10), under imagery, and "the Lord used to speak to Moses face to face, as a man speaks to his friend" (Exod 33:11), that is, intimately.

The theme of deliverance, expressed vividly in the poetic climax of Exodus 15, became the confessional tradition of Israel. When in the 6th century, the creator God used Cyrus the Persian as his instrument in a second rescue, the appropriate language and imagery was at hand to the prophet of the exile (Isa 44:24–27; 44:28–45:5; 45:6–7).

**b. From Babylon.** The Deuteronomistic Historian-theologian interpreted the destruction of Samaria and Jerusalem and Israel's half-century of captivity in Babylon as a punishment inflicted by God for constant infidelity to him during the period of the monarchy (2 Kgs 17:7–41; 21:1–16; 24:1–7). This same God now leads his people back to Jerusalem. Deutero-Isaiah sees God at work in the victories of Cyrus (41:2–4; 41:25; 44:22–45:7; 45:12–13). Cyrus made Media a Persian satrapy in 556; in 547 he swept across Asia Minor to defeat Croesus of Lydia; in 546 he attacked Babylon; in 539 he overcame it. But, for the

theologian of the Exile, he was God's instrument. Cyrus is God's shepherd (44:28) and God's anointed (45:1). All these events have taken place because "I am the Lord, who made all things" (44:24); "I am the Lord, there is no other; besides me, there is no God" (45:5); "I form light and create darkness, I make weal and create woe, I am the Lord who does all these things" (45:7). The cry "I am He," "I am YHWH," rings through Deutero-Isaiah (e.g., 41:4; 43:13, 15; 45:3-7, 8; 48:12; 49:23-24; 51:16). The creator God works wonders in the desert (40:3-5; 41:18-19; 44:3-4; 49:11). Because he is the creator, he is the Lord of the universe and the Lord of history. Because he is the creator, he is also the rescuer. The proclamation: "I am YHWH," (44:24b), is introduced by two qualifying active participles, "who redeems you and who fashions you" (44:24a), and is followed by nine more active participles describing YHWH in act (44:24b-28). In all, YHWH is described by eleven active participles—redeeming, fashioning, making, stretching out, spreading out, frustrating, turning back, confirming, saying (3 times).

**4. God and the Prophetic Word.** The prophets of Israel do not discuss the subject of God, nor do they have something of their own to say about God (cf. Zimmerli 1976). They claim that God comes to word through their words and that God's word is irresistible: "The lion has roared, who will not fear? The Lord has spoken, who can but prophesy?"; "the Lord took me from following the flock, and the Lord said to me, 'Go, prophesy to my people Israel'" (Amos 3:8; 7:15). God is active in the call of the prophet (cf. Isaiah 6; Jeremiah 1; Ezek 2:1-3). The phrases "oracle of the Lord" (*nē'um YHWH*), "thus says the Lord" (*kô 'āmār YHWH*), and "the word of the Lord came to me" (*wayēhî dēbar YHWH 'ēlay*), make it clear that the prophet does not speak *about* God. God sends his prophet, is involved in the life of the prophet, and moves into history through the prophet. But God transcends the prophet and his proclamations, and is not constrained within the framework of his interventions through the prophet.

It is through the prophets that God denounces both houses of Israel (Amos 2:2-4; Isa 8:14). God accuses Israel of social injustice through Amos and Micah, of defection to strange gods through Hosea and Jeremiah, of violation of the sanctity of God by political intrigue through Isaiah, of violation of the sabbath through Ezekiel. Doom is decreed. But punishment is always preceded by God's warning and offer of mercy (Amos 4:1-12; 5:4-7, 15; 7:8; 8:2; Isa 5:25; 9:11[Eng 12], 16[Eng 17], 20[Eng 21]; 10:4; 14:32; 28:16-17; 30:18; Ezek 20:5-26). The prophets, under God, leave open the possibility of a "remainder." It is God himself who will renew the people internally (Jer 31:31-34; Ezek 36:24-32) and breathe new life into dead bones (Ezekiel 36).

Ezekiel 25-32 contain a series of "oracles against the nations" (cf. Isaiah 13-23; Jeremiah 46-51; Obadiah). The oracles are introduced by the standard formulas, "the word of the Lord came to me," "thus says the Lord God"; then come the details of the punishment followed by the purpose or the result. Nineteen times in Ezekiel the purpose or result is "you (they) will know that I am the Lord" (*ki 'ānî YHWH*, 25:5, 7, 11, 14, 17; 26:6; 28:22b, 23b, 24, 26; 29:6a, 9, 16, 21; 30:8, 19, 25, 26; 35:15). God, through

his chastisement proclaimed in the word of the prophet, brings knowledge of himself at work in history.

### C. God and Prayer

God is readily accessible in prayer. Any member of the community can approach God anywhere and at any time and speak freely. Abraham approaches God and talks with him (Gen 15:1-6; 19:22-33); Moses speaks to God "face to face" (Exod 33:11); Hannah responds with her "Magnificat" when God answers her prayer; Hezekiah laments before God in his illness (Isa 38:9-20); Job argues with God throughout the book; Jeremiah confronts God (11:18-23; 12:1-6; 15:10-12, 15-21; 17:12-18; 18:18-23; 20:7-18).

**1. God and the Psalmists.** The Psalter brings together what is essential in the prayer of Israel. God of the psalms is God who is ever at work. He is addressed as the one who has acted in the remote or immediate past, or is now acting. The psalmist calls on other worshippers, even on enemies and pagans, to acknowledge God's action and to respond by making it known.

**a. God and the Lament.** About one fifth of the psalms are personal laments (Psalms 3; 4; 5; 7; 10; 17; 22; 25; 26; 28; 31; 39; 42; 43; 54; 55; 56; 57; 59; 61; 64; 69; 70; 71; 77; 120; 140; 142; add the "penitential psalms," Psalms 6; 32; 38; 51; 102; 130; 143). There are also communal laments (Psalms 12; 44; 58; 60; 80; 83; 85; 94; 123; 126). The individual calls on God in distress; God delivers him; so the psalmist calls for praise, that is, for acknowledgment of God's action (e.g., Psalms 18; 30; 40; 66:13-20). The psalmist, who is in distress, recognizes that God has responded, that the petition has been heard; so he declares God's praise, e.g., Ps 40:9-10:

I have told the glad news of deliverance,  
in the great congregation;  
lo, I have not restrained my lips,  
as thou knowest, O Lord.

I have not hid thy saving help within my heart,  
I have spoken of thy faithfulness and thy salvation;  
I have not concealed thy steadfast love and thy  
faithfulness  
from the great congregation.

**b. God and Praise.** Praise is a response to God's action. A typical response to God's action is: "O give thanks to (praise) the Lord, for he is good," or a close equivalent (e.g., Psalms 18:3, 49; 30:1, 4, 12; 34:1, 3; 52:9; 66:20; 107:1, 8, 15, 21; 116:19; 118:1, 26; 138:1, 2).

**c. God at Work.** The psalmist not only declares God's praise, acknowledges that God has acted, but also describes God at work. Psalm 103 begins and ends with a call to praise or bless (vv 1-2, 20-22). The opening call is followed by six active participles describing "God in act"—"who forgives . . . who heals . . . who redeems . . . who crowns . . . who satisfies . . . who works" (vv 5-9); he is at work in this ordered world (vv 10-26); he gives life to all living creatures (vv 27-30). Hence, may the glory of the Lord (*kābôd YHWH*) endure forever. God's *kābôd* is created order (cf. Isa 6:3c: "the fullness of all the earth is his glory") and his life-giving power which effects this order. Psalm 147 describes God in act with six active participles

in vv 1–6, five in vv 7–11, and five in vv 12–20; a number of verbs (in the imperfect) are used to express continuous action (cf. Job 9:5–14; 26:5–14).

**d. God of Steadfast Love.** God of the psalms, like the God of Moses (Exod 34:6–7) is the God of steadfast love (*hesed*). The word occurs in some fifty psalms, in a number of them several times (e.g., 59:11[Eng 10], 17[Eng 16], 18[Eng 17]; 89:2[Eng 1], 3[Eng 2], 15[Eng 14], 25[Eng 24], 29[Eng 28], 34[Eng 33], 50[Eng 49]; 106:1, 7, 45; 107:1, 8, 21, 31; 118:1–4, 29; 119:41, 64, 76, 88, 124, 149, 159). In every verse of Psalm 136, the response is “for his steadfast love is forever” (*ki lē ‘ōlām ḥasdō*). The steadfast love covers creation, rescue, and covenant fidelity.

**2. God Inexhaustible.** The psalmists describe God in many ways, God hears the cry of the distressed (6:9–10[Eng 8–9]; 17:6; 28:6; 66:19–200) and rescues him from Sheol, the Pit, or the grave (16:10; 30:4; 49:16[Eng 15]; 86:13; 99:11; 139:80); he delivers the petitioner from his enemies (18:49[Eng 48]; 35:9–10; 40:18[Eng 17]; 59:2–3[Eng 1–2]); he judges (6:11[Eng 10]; 7:7[Eng 6], 9[Eng 8], 12[Eng 11]; 9:8–9[Eng 7–8]; 94:2; 96:13; 98:9); he is king (10:16; 24:7–10; 29:10[forever, *lē ‘ōlām*]; 43:4[Eng 4]; 47:8; 93:1; 95:3; 96:10; 97:1; 99:1; 145:1; 146:10). God is a rock, a fortress, and a refuge (18:3[Eng 2], 32[Eng 31], 47[Eng 46]; 27:1; 28:1; 31:4[Eng 3]; 61:3[Eng 2]; 62:3[Eng 2], 7–8[Eng 6–7]; 71:3; 78:35; 89:27[Eng 26]; 91:2). God is a shield (3:4[Eng 3]; 7:11[10]; 28:7; 84:10[Eng 9]; 144:2), and the one in whom the petitioner has confidence (4; 55:24[Eng 23]; 56:4–5[Eng 3–4], 12[Eng 11]). God hides people in his presence and shelters them (31:21[Eng 20]; 32:7; 91:1). God loves and prospers the law-abiding just one (1; 11:7; 15:2; 37:30–31; 112) and raises the poor (72:12; 113:7). God rises up in the assembly of the gods (29:1–2; 77:14[Eng 13]; 82:1; 89:6–9[Eng 5–8]; 95:3; 96:4; 97:7; 148:2). God is the Lord of history (77:20–21[Eng 19–20]; 78; 81:11[Eng 10]; 105). God is incomparable (77:14[Eng 13]; 113:5–60), incomprehensible, all-knowing, all-seeing (139; 147:5). God is all this because he is the creator (8:4[Eng 3]; 19; 24:2; 33:6–7; 90:2; 95:6; 96:10; 100:3; 102:26; 103:14; 104; 136; 138:8; 147:4; 148:5). He is also described as creator in the imagery of the mythological struggle at the beginning (74:13–17; 89:10–12[Eng 9–11]). God is he “who made heaven and earth” (96:5; 115:15; 121:2; 124:8; 134:3; 144:6).

### D. God Mysterious

Israel had to learn how mysterious, unteachable, and beyond manipulation was its God.

**1. God beyond Human Measure.** The psalmists know that God does not judge according to a strict pattern. God is “merciful and gracious, slow to anger and abounding in merciful love . . . he does not deal with us according to our sins, nor requite us according to our iniquities” (Psalm 103:10; cf. Psalm 130:3; Exod 34:6–7). God does not act as humans do. Hosea recalls Israel’s long history of infidelity to God (11:1–9). But, despite centuries of disloyalty, God will not destroy Ephraim “for I am God and not man, the Holy One in your midst, and I will not come to destroy” (11:9). When David had displeased God by holding a census of the people (2 Samuel 24), the prophet Gad offered him three choices of punishment, three years of

famine in the land, or three months in flight before his enemies, or three days of pestilence in the land. David answered: “I am in great distress; let us fall into the hands of the Lord, for his mercy is great; but let me not fall into the hands of man” (2 Sam 24:14).

**2. God Unteachable.** One of the elements of the “common theology” of the ANE (cf. Smith 1952) that Israel shared with her neighbors was that the “high god” rewards and punishes according to a strict pattern. The previous paragraph has shown that the true Israel did not accept this standard theology. Jeremiah and Job explicitly contest it. Jeremiah does so in his “confessions” (11:18–23; 12:1–11; 15:10–12, 15–21; 17:12–18; 18:18–23; 20:7–18). The beginning of his private debate with God may be rendered: “Just you are YHWH; even so I will argue with you; yes, there are cases I would like to discuss with you. Why do the wicked prosper?” (12:1). God replies in two proverbs (12:5–6). God does not solve the tension between belief and reason for Jeremiah. He demands that Jeremiah renounce any ultimate insight into the “why” of life and that he give himself in complete trust to the will of God, known only by faith. Jeremiah admits his own shortcomings (15:17, 19); he almost accuses God of being untrustworthy (15:18), and lays against God the charge of deception (20:7–12). But he finally accepts the “Lord of hosts who tries the righteous, who sees the heart and the mind” (20:12), though at the same time calling for vengeance on his and God’s enemies” (11:20; 15:15; 20:12b). Job contests this traditional teaching on retribution through forty chapters. But God directs the drama (1–2; 42:7–9). God will teach Job, not Job God. God’s honor is at stake. Will Job, the just one, blaspheme him? Eliphaz (15:17–19) and Bildad (8:8–10; 18:2–21) go back to the testimony of the ancients and to traditional theology to insist that Job must have done wrong. Job protests his innocence. The friends persist with the standard answers. Job wrestles with God: “Though I am innocent, I cannot answer him; I must appeal for mercy to my accuser” (9:15). He tells his disputants that their so-called orthodox theology is worthless and false to God (13:2–12). They want to lock God within a system. Then God speaks to Job out of the tempest. His power and wisdom have organized the ordered cosmos out of the primeval chaos; how, then, can Job know and teach him? (38:4–7). If Job cannot master and tame the mythical monsters, Leviathan and Behemoth, whom YHWH vanquished, how can he master God? (cf. Day 1985: 62–87, esp. 86–87). Job acknowledges that he has not understood and that God is beyond him (40:3–5). He has now really experienced God. He now knows that God cannot be encapsulated in a formula. At the end of his struggle, Job confesses:

I know that thou canst do all things,  
and that no purpose of thine can be thwarted.  
Who is this that hides counsel without knowledge?  
Therefore I have uttered what I did not understand,  
things too wonderful for me, which I did not know  
(42:2–3).

God does not give a solution. He does not intervene as another contestant or as a *deus ex machina* in a Euripidean

drama. He is above all this. He speaks as God, not as one among humans. The solution lies hidden in him.

The problem of the just who suffer had been raised in the case of the total destruction of Sodom (Gen 18:22–33). Abraham asks the Lord: “Will you really sweep away the just with the wicked?” (v 23b). The OT was aware both of the solidarity of the community in guilt” (Gen 20:9; Exod 34:7; Josh 7; Deut 21:1–9) and of the responsibility of the individual (Deut 24:16; Jer 31:29–30; Ezekiel 18). Abraham does not “pray for” Sodom so that God may avert his wrath, nor does he bargain with God. Abraham raises the question of the justice of “the judge of all the earth” (v 25b). The judge insists that the innocent are not to perish: “For the sake of ten I will not destroy it” (v 32b). But it seems that there are no just people in Sodom. The problem of the justice of God is not fully solved. It remains part of the mystery of God.

**3. God beyond Images.** It was an abomination in Israel to make any image of YHWH (Exod 20:4–6 = Deut 5:8–10) who is intangible and unseeable (Exod 33:19–22; cf. Gunneweg 1984). An early tradition did away with “foreign gods” (Gen 35:1–5). Images, though not of the Lord, had been tolerated as part of the official cult (2 Kgs 18:4; 23:4–14). Israel’s revulsion for images of the divinity is expressed in its extreme form by Deutero-Isaiah (44:9–20; cf. end of A.3). Israel was not to have representations of God as did her neighbors. God cannot be confined to an image or even represented by one. God cannot be confined even within the temple. Solomon prayed on the occasion of the dedication of the temple: “But will God indeed dwell on earth? Behold, heaven and the highest heaven cannot contain thee; how much less this house which I have built?” (1 Kgs 8:27). Further, the Israelite must not try to manipulate God by magic: “there shall not be found among you anyone . . . who practices divination, a soothsayer or augur, or a sorcerer, or a charmer, or a medium, or a wizard, or a necromancer” (Deut 18:10–11; cf. Lev 19:31; 1 Sam 28:7–19; Isa 8:19). The God of Israel is beyond any manipulation.

### E. God King and Warrior

Israel, united and divided, was a monarchy for four-and-a-half centuries. The cult of YHWH was conducted in the temple built by the king. It was natural, then, that YHWH and king be linked. The cry, “Marduk is (has become) king,” had been echoing for centuries in Mesopotamia. The cry “El is king,” “Baal is (shall become) king,” was echoing in Canaan where Israel lived. Baal had battled with the monster Yam (the sea); he had conquered; his temple was built; he had become king. But no, proclaimed Israel in polemic. It is YHWH, the God of Israel, who is king, not El or Baal. YHWH conquered and shattered the heads of the mythical monster, Leviathan or Rahab, at creation (Psalms 74:12–17; 89:10–15 [Eng 9–14]). He repulsed and tamed the revolting, primeval rivers (*nēhārôt*), and so is king (Psalm 93:1, 4–5). Let the sea (*yam*) and the unruly waters (*nēhārôt*) roar as they will, YHWH is king over all (Psalm 98:6–8). “YHWH sits enthroned over the flood (*mabbûl*) forever” (Psalm 29:10). YHWH is master of the foundations of the earth, the deep (*tēhôm*), and the waters (*mayyim*) (Psalm 104:6). He is the king of glory “who founded the earth upon the seas (*yammim*), and established

it upon the rivers (*nēhārôt*),” and is now enthroned in the temple on Zion (Psalms 24; 46:4; cf. 1 Sam 4:4). He is enthroned forever (Ps 102:12). The mythical language is part of Israel’s Canaanite heritage.

Deutero-Isaiah recognizes YHWH as “the creator of Israel, your king” (43:15), as he links the battle against the waters with the Exodus, old and new (43:15–16; 44:24; 45:11–13; 54:5). The messenger who announces the good tidings of release to Zion proclaims that “your God is king” (52:7), that is, God has rescued and triumphed. The song of Moses had already celebrated YHWH’s victory at the Red Sea as the victory of a king: “YHWH is king forever and ever” (Exod 15:18). Finally, on the day of the Lord, “YHWH will become king over all the earth” (Zech 14:9). “. . . the day of the Lord is the epiphany of the divine King; here the battle against chaos is ultimately waged against Leviathan, the Serpent, the Dragon, and Death. Cosmic evil is conquered once and for all” (Mettinger 1985: 33; cf. Isa 25:8; 27:1).

YHWH, the God of Israel, is described as a man of war (*ʔiṣ mīlhāmāh*, Exod 15:3). In one graphic passage Deutero-Isaiah says that “the Lord goes forth like a mighty man, like a man of war he stirs up his fury; he cries out, he shouts aloud, he shows himself mighty against his foes” (Isa 32:13). YHWH is consulted about war (2 Sam 5:19, 23; 1 Kgs 22:5, 7–8). YHWH declares war (Exod 17:16; Num 31:3). YHWH walks in the camp (Deut 23:14) and “he can bring us safe whether we are few or many” (1 Sam 14:6; cf. Judges 6). The war cry is often “the battle is YHWH’s” (e.g. 1 Sam 17:47), and the cry in the middle of the battle is “the Lord has delivered them into your hands (e.g., Judg 3:28; 7:15; 1 Sam 7:8). The ram’s horn sounded in battle is the symbol of YHWH’s voice (e.g., Num 10:9). YHWH alone wins the victory (Josh 10:10; Judg 4:15; 2 Sam 5:24). The holy war ideology was shared with Israel’s neighbors, and war between them and Israel was a contest between their gods (e.g., 2 Kgs 3:21–27). The immediate postexilic prophets draw on the imagery and ideology of the divine warrior to describe God’s intervention to bring about the ideal eschatological age (Isa 59:15b–20; 63:1–6; 63:19b–64 [Eng 64:1–3]; Zech 9:1–17; 10:1–12; 14:4).

### F. God and Wisdom

The Deuteronomist urges the people to obey God’s ordinances and statutes, for “that will be your wisdom and understanding in the sight of the peoples, who, when they hear all these statutes will say, ‘Surely this nation is a wise and understanding people (*ʔam hākām wēnābôn*)’” (Deut 4:6). That is, the people will be acting in the best tradition of wisdom. The experience of God that the wisdom writings presuppose is called “the fear of God.” The wisdom school (teacher[s]) of Proverbs explains this wisdom: “The fear of the Lord is the beginning of knowledge” (Prov 1:7); “the fear of the Lord is the beginning of wisdom, and the knowledge of the Holy One is insight” (Prov 9:19). About one seventh of the sayings in the Solomonic sections of Proverbs (10:1–22:16; 25–29) have a religious flavor. The fear of the Lord is a source of confidence and “fountain of life” (14:26–27); it is “instruction in wisdom” (15:33); it “leads to life” (19:33). God is the one who has supreme dominion, “many are the plans in the mind of man, but it is the purpose of the Lord that will be” (19:21;

20:24). Decision is wholly with God (16:33); man proposes, but God disposes (16:1–9). God made the eye and the ear (20:12); God created poverty and riches (22:2); “evil men do not understand justice, but those who seek the Lord understand it completely” (28:5). The wisdom tradition urges its disciples to search for the fear of the Lord (2:1–5) and for true religious wisdom (3:1–2). This wisdom (*hokmâh*), this fear of the Lord, is awe and reverence before God who creates and orders. The fear of the Lord and the knowledge of God are equated (2:5). Knowledge for the Israelite is an experience of the innermost being. It is God who possesses this wisdom. He founded the earth by his wisdom (3:19), and wisdom has always been his (8:22–31). Proverbs identifies the creator, the source of wisdom, with YHWH, the God of Israel.

### G. God the Restorer

The Chronicler inherited the theology of infidelity and retribution of the Deuteronomist, the theology of God's steadfast love (*hesed*) and covenant loyalty, and the theology of God the rescuer who is the God of Abraham, Isaac, and Jacob. He is concerned with the law, the lawgiver, and the land. Ezra accepts the law again and looks to the reestablishment of the people of God. God, in his steadfast love, has restored his people using the Persian kings as his instruments (Ezra 7:27–29). God, who is just, has both punished and preserved his people (Ezra 9:10–15). The restoration belongs to God alone. The promise of the land is renewed, the temple is restored, and God dwells again with his people. As God has acted in the past, so will he act in the future. The God of the Chronicler is one; he is the God of the past and the future, and the God who makes himself known in the present in the law of the temple.

### H. Conclusion

God of the Hebrew Bible is God who is forever active. God is always present and can be found anywhere, but cannot be trapped, manipulated, or reduced to human dimensions. The OT experience of God is the experience of some eight hundred years. In the traditions of the ancestors of Israel, the patriarchs worshipped one God; they were concerned with one God, and no other appears. They may have identified their one God with El of Canaan. But God was one, though of many titles: El Elyon (God, the most high), El Qoneh (God, the creator), El Roi (God, the [one] seeing me?), El Olam (God, the eternal), El Bet-el (God, [the one of] Bethel), El Elohe Yisrael (God, the God of [the patriarch] Israel), Anoki hâ El (I am God himself), El Shadday (God, the steppe one). This was at least monolatry. The Exodus reflects a view of one God, identified with the God of the patriarchs, who intervenes as a God who rescues and takes vengeance, who is a God of war and a warrior. During the periods of the settlement and the monarchy, the one God was confused in the popular mind with the gods of Canaan. Even “official” religion, that is, religion under royal aegis, joined in the confusion. The Deuteronomist tradition called for order. The Deuteronomist(s) was even stricter. Monolatry, implied monotheism, and the monotheizing struggle, crystallized in the explicit monotheism of Deutero-Isaiah. YHWH, the God of Israel, alone existed; other “gods” or “divinities” simply did not exist. Israel had arrived at the

strict monotheism of Judaism. But throughout this long struggle, and despite popular aberrations, Israel was always sure that it was dealing with the same God.

JOHN J. SCULLION

### GOD IN THE NT

The heart of the NT message is the proclamation of what God has accomplished through Jesus Christ. The focus of these documents is therefore predominantly Christological, but not to the exclusion of theological concepts. To be sure, Jesus' own preaching was verifiably God-centered, but a doctrine of God is no longer the thematic center in the NT nor in the early Christian preaching that lies behind it. Nevertheless, this doctrine is always and everywhere the NT's most fundamental presupposition, for statements about God form the matrix of the Christian message, conditioning what is said about Jesus, providing warrants for ethical appeals and warnings, and structuring the concepts of church, salvation, and history.

From this matrix a NT doctrine of God, a list of divine attributes and essences, can be formulated, though such an approach runs the risk of masking the diversity of theological emphases found within the various books. The fundamental understanding of God that emerges in the NT, however, is in direct continuity with OT theology, especially as this was interpreted by later Judaism. Nevertheless, though familiar OT concepts are sustained, they acquire in their new setting a characteristically Christian focus. God is one, and there is likewise one Lord, Jesus Christ; one church, his body; one Spirit; and, in later texts, one doctrine about Christ. God is the creator and giver of life, who has raised Jesus from the dead and who will give resurrection life to all who believe. God is the sovereign ruler, whose strength is paradoxically revealed in the weakness of the cross. God is the righteous judge, whose impartiality extends to both Jews and Gentiles and who will set things right for the faithful in the age to come. God is the loving father, who supremely demonstrated that love in the sending of Jesus Christ, the Son.

Although some passages in the Johannine corpus describe God in terms of abstractions like spirit (John 4:24), light (1 John 1:5), and love (1 John 4:8), and other NT writings use the philosophical language of eternity (Rom 16:26), invisibility (1 Tim 1:17), and immortality (Rom 1:23; 1 Tim 1:17; 6:16), God is encountered in the NT primarily as a personal force, occasionally an anthropomorphized (Luke 11:20) and anthropopathized (Rom 1:18; 2 Pet 3:9) force. Moreover, because the God of the NT is characteristically conceived and addressed as Father, this experience of the divine takes on a very intimate character as well as an overwhelmingly masculine one. The several OT texts that describe God in terms of female imagery (Deut 32:18; Isa 42:14; 49:15; 66:12-13; Psalm 22:9-10) are reduced in the NT to a single Lukan parable that likens the joy in heaven over a repentant sinner to the rejoicing of a woman who has found a lost coin (Luke 15:8-10).

### A. Jesus' Proclamation of God

Jesus' understanding of God, insofar as it can be reconstructed from the gospel accounts, stands in strong continuity with OT thought, particularly that of the prophetic literature. God is creator, king, and judge, whose holy will, though not fully captured by the Law, is certainly not antithetical to it, and whose love for all creation is reflected in, but not limited to, God's covenant love for Israel. Two features, however, emerge from this background as particularly characteristic of Jesus' preaching and particularly evocative of his concept of God: his proclamation of the imminence of the kingdom of God and his use of *'abbā* (father) in prayer to God.

In proclaiming the apocalyptic message of the imminent coming of the kingdom of God, Jesus implies certain attributes of God. Insofar as the kingdom is presented as the end of historical development, yet as an event that cannot be influenced by any human plan, God is proclaimed as the One who is outside human history, who is above this history, and who stands in judgment over it. Thus God's power, sovereignty, and especially God's absolute transcendence are strongly affirmed.

Yet Jesus also addresses God as Father (*abba*), a title that is found in Judaism and Greco-Roman religions, but not in the familiar form or with the prominence it finds in the prayers of Jesus. This form of address suggests a different understanding of God. A sense of intimacy is conveyed, a relationship characterized by simplicity and rapport, but also one that, in view of the rigid patriarchal structure of Palestinian society, was not without elements of reverence and obedience.

These two aspects of Jesus' message stand in creative and somewhat corrective tension. The God of the kingdom sets before the world the radical demands of the kingdom, yet the God who demands and who will judge is also the Father who can be appealed to in prayer with familial intimacy. Conversely, this intimate form of address is guarded by the kingdom language against any interpretation that would dissolve the divinity into merely a subjective experience.

### B. God in the Preaching of the Early Church

In the earliest preaching of the Church, insofar as it is recoverable from certain hymnic and creedal statements embedded in the letters of the NT, Jesus' message about God and the coming kingdom has already been transformed into a message about Jesus. To be sure, in the preaching to gentiles (as opposed to the preaching made to Jews) an important component was the proclamation of the one true God (1 Thess 1:9-10; 1 Cor 8:6; Eph 4:4-6; cf. 1 Tim 2:5), since conversion to Christianity meant for many of them also conversion from idolatry. The central feature of this preaching, however, was the message of Jesus' death and resurrection, yet even this message contained a strong theological statement: Jesus has been raised from the dead and it is God who has done this. Sometimes indicated merely by the passive voice (1 Cor 15:4; Rom 8:34), but more often explicitly stated (Rom 4:24; 1 Pet 1:21; Acts 2:24), this claim involves more than a Christianized instance of the fundamental faith in the God who makes the dead to live (2 Kgs 5:7), more even than the proclamation that this eschatological activity is now break-

ing into the world. God is confessed as having raised Jesus from the dead, yet Jesus was crucified because of his understanding and proclamation of God. In this context the resurrection is not only a demonstration of God's life-giving power, but more concretely a vindication of Jesus and his message about God. Since Jesus was crucified as the Messiah, the eschatological salvation bringer in whom the promises of God are fulfilled, the resurrection also confirms him in this role and indirectly confirms God as a fulfiller of promises. Finally, insofar as this early preaching retained Jesus' call to repentance (cf. 1 Thess 1:9–10), it also retained his vision of the transcendent God who will judge the earth, but who, as the loving Father, offers pardon to all sinners.

### C. The NT Concept of God

That God is good, wise, powerful, just, blessed, holy, and merciful the NT writers do not for a moment doubt. Nor, however, do the OT writers or, for the most part, the pagan writers of this period. Documentation for these and other attributes is as easy to come by in the NT as in the OT. In what follows it is not the mere presence of these affirmations that will be discussed, but the way in which some of these familiar attributes acquire special nuance and specific application in their NT contexts.

**1. The One God.** Statements of faith in the one God (1 Cor 8:4–6; Eph 4:6; 1 Tim 2:5; Rom 3:30; Jas 2:19), the only God (Rom 16:27; 1 Tim 1:17; 6:15; Jude 25; John 17:3), the God from whom all things derive (Rom 11:36; Heb 2:10; 1 Cor 8:6; Rev 4:11) permeate the NT, and their presence guarantees continuity with the OT and its fundamental proclamation of practical (Deut 5:7) and theoretical (Deut 4:35) monotheism. Even within the Greek tradition the affirmation of one God, though often only a syncretistic formula, had become during the Hellenistic period something of a commonplace. Thus, except in the Johannine corpus, where explicit affirmations of Jesus' equality with God (John 5:18; 10:30) made the issue problematical, most statements of monotheism in the NT are cited, not as a point of dispute, but as a common foundation upon which to build more exclusively Christian claims.

To be sure, insistence on faith in one God did not preclude belief in the existence of lesser powers (Jas 2:19; 1 Cor 8:5). Whether they be termed demons (Jas 2:19; 1 Cor 10:20), elemental spirits of the universe (Gal 4:3), principalities and powers (Rom 8:38; Col 1:16), or, more metaphorically, the belly (Phil 3:19) or mammon (Matt 6:24), their presence and power were considered a real and constant threat to Christians. Yet at the same time they were not comparable to the reality and power of the true and living God and thus not a challenge to monotheistic faith. Rejection of these "powers" was, of course, a necessary component of conversion to the true God (1 Thess 1:9; Acts 14:15; 17:29–30; 19:26), but the primary emphasis of the polemic against them was not to refute their reality (which was generally assumed) but to point out the moral consequence of submission to their inferior power, for the NT followed the OT in its assumption that idolatry led inevitably to moral decay (Rom 1:18–32; Eph 4:17–24; 1 Pet 4:3).

This concern with ethical monotheism is also found in the gospel tradition, especially in the Gospel of Mark,

which places strong emphasis on the affirmation of one God. In Mark 12:28–34, Jesus responds to a question about the greatest commandment by quoting the *Shēma*<sup>c</sup> (Deut 6:4–5), thus affirming the primacy of monotheistic faith: "Hear, O Israel: The Lord our God, the Lord is one; and you shall love the Lord your God with all your heart, and with all your soul, and with all your mind, and with all your strength." Yet the fullness of this quotation, with its emphasis on total devotion to God, and the addition of a "second like it," love of neighbor as oneself, draws out the ethical consequence of faith in the one God. Again in Mark 10:18–19 this idea is stressed, for the affirmation of God's unique goodness ("No one is good but God alone") is immediately followed by a list of ethical imperatives that derive from the uniquely good God. The monotheistic confession was thus taken very seriously in Mark, not because there was a pervasive rational challenge to it, but because its ethical implications were so serious. Dedication to the one God was demonstrated by living out God's ethical demands.

Monotheism was also seen to have Christological implications. In Mark 10:17–22, the confession of "God alone" is coupled with Jesus' command to "follow me," suggesting that faith in one God and following Jesus are compatible and even complementary (see 2:7–12). In Matt 23:9–10, the uniqueness of God, the "one Father," is paralleled by the uniqueness of Jesus, the "one master" who stands in contrast to the multiplicity of earthly masters. This point is also emphasized in 1 Tim 2:5–6, where the contrast is between one God—one Mediator and the multiplicity of gods and mediators suggested by gnostic theogony. Finally, Paul's complex argument in Gal 3:15–20 contrasts the one God and one (messianic) offspring with the multiplicity suggested by the Law and its mediators.

Ecclesiological conclusions are also drawn from the fundamental premise of one God. In 1 Cor 8:4–13, Paul's thought moves directly from the idea of the existence of one God and one Lord (in contrast to the multiplicity of "so-called" gods and lords) to the communal and social consequences of this. Since the Church owes its communal existence and thus its allegiance to the one God and one Lord, it must show this monotheistic allegiance and maintain this unified existence by exercising concern for the weaker members of the community. In Rom 3:29–30, Paul uses God's oneness as a warrant for the primacy of faith over Law and for the consequent unity of Jews and gentiles in the Church. This concept receives liturgical amplification in Eph 4:1–6, where the admonition to the Church to maintain unity is backed up by a reference to the theological unity that sustains it. Here in the context of competing winds of doctrine (4:14), the one-God affirmation has exploded into a multiplicity of monads: one body, one Spirit, one hope, one Lord, one faith, and one baptism. In the Pastoral Epistles the competing doctrines seem to pose an even greater threat, for the rhetoric has taken on a more aggressive tone. Here the gnostic challenge to Christian monotheistic faith has led to an insistence that only one doctrine preserves the truth of this faith, the doctrine transmitted carefully by the Church (1 Tim 1:3; 4:6–10). In addition to these specific applications, acclamation of the only God is a standard component of hymnic and doxological passages (Jude 25; 1 Tim 1:17; 6:15–16; Rom

16:27), where it contributes more indirectly to the contextual argument.

This fundamental monotheistic faith is challenged, but not seriously compromised, by Christological developments within the early Church. Many of the functions of God—creative (1 Cor 8:6; John 1:3), ruling (1 Cor 15:24–25), and judicial (1 Cor 4:4–5)—and a number of divine epithets, including the title “Lord,” are transferred to Jesus. He is the image of God (Col 1:15), bears the very stamp of God's nature (Heb 1:3), and in a few texts, some more ambiguous than others, he is even hailed as God (Rom 9:5 [disputed]; Titus 2:13 [disputed]; John 1:1; 20:28). Yet Paul insists that Jesus resisted the temptation to grasp equality with God (Phil 2:6) and affirms that in spite of the divine authority of the risen Christ, which includes dominion over “every rule and every authority and power” (1 Cor 15:24), he will ultimately deliver this dominion back to God, including dominion over himself, in order “that God may be everything to every one” (v 28). Thus Paul insists that Jesus' divine authority, though tremendous, is nevertheless partial and temporary, while God's power and deity are eternal (Rom 1:20). Even in the Fourth Gospel, where assertions of the unity of Father and Son abound (10:30; 14:10; 17:11, 21), the point is emphasized that this oneness is that of agent and sender (5:19–30; 6:38–40), a oneness of will and function that allows the agent-son to reveal the sender-father (12:44–50; 14:9) without compromising God's primacy (14:28).

**2. The Creator and Giver of Life.** The NT writings stand in firm continuity with the OT when they acknowledge God as the living God in contrast with idols, which may represent active, though subordinate, powers but are themselves lifeless forms (1 Thess 1:9; Acts 14:15; Rom 1:23). The living God, the immortal, imperishable God, also stands in contrast to, and thus as the hope for, mortal and perishable humanity (1 Tim 1:15–17; 4:10; John 6:57; Rev 7:2–3). Thus, God is affirmed in both OT and NT as the One who lives and who gives life. In the NT, however, this affirmation acquires a distinctly Christological focus.

In general, God's creative activity is presupposed rather than argued in the NT, and thus references to it appear as simple allusions or in formulaic contexts (Mark 13:19; Rom 11:36; Eph 3:9; 1 Tim 6:13). This concept receives, however, particular prominence in the prayers (e.g., 4:24) and speeches (14:15–17; 17:22–31) of the book of Acts. While the prayers refer to God's creative power as part of an affirmation of absolute divine sovereignty, the speeches to the gentiles (pagans) show more proselytizing intent as they portray a God whose self-revelation through the created order is available to all. Indeed, one of the most sustained theological statements in the NT, the Areopagus speech in Acts 17:22–31, develops this idea at great length, drawing from it not only the usual (but here muted) condemnation of idolatry but also the somewhat surprising link with a pantheistic formula (“in him we live and move and have our being”) as well as the more usual call to repentance (vv 30–31). The motif is also prominent in the book of Revelation, where the repeated emphasis on God “who created heaven and what is in it, the earth and what is in it, and the sea and what is in it” (10:6; cf. 4:11; 14:7) sets the stage for the later description of God's creation of a new heaven and a new earth (Rev 21:1–22:5).

The historical situation often influenced the application in quite specific ways. In Colossians, for example, God's creative activity, effected through Christ, is strongly emphasized in order to counteract an ascetic, world-denying piety. The author of 1 Peter, on the other hand, addresses a situation of persecution by stressing the faithfulness of the Creator (4:19), thereby establishing the hope that God will faithfully reward those who suffer through the “fiery ordeal” (v 12). The most widely developed idea, however, is that one should respond to God, the creator and giver of life, with an attitude of thanksgiving for the gift (1 Cor 4:7). Though this idea is often presented in connection with food, especially in the context of ascetic or Jewish dietary restrictions (1 Tim 4:3–5; Rom 14:5–23; 1 Cor 10:23–30, for which 8:6 serves as the premise), Paul develops fully its theological implications in the opening chaps. of Romans. There the fundamental failure of the gentiles to render thanks to their creator, who has been clearly revealed through nature, results in their total condemnation: “Therefore they are without excuse” (Rom 1:20–21). This pattern continues to influence the subsequent argument, where justification itself is defined as a gift (3:24; 5:15–17), which evokes (Rom 6:17–18; 7:25; 1 Cor 1:4; 1 Thess 2:13), or should evoke (1 Cor 14:16–17; 1 Thess 5:18), an attitude of profound thanksgiving.

Though general statements about God's creative activity are fairly widespread, because of the resurrection faith that forms the heart of the NT message, it is God's power to restore life to the dead that is the actual center of attention. This idea of God's power over death and life is found, of course, in the OT as well, where it takes many forms, ranging from literal affirmations of God's ability to resurrect the dead (Dan 12:2; Isa 26:19) to more metaphorical references to the ability to restore the fortunes of the afflicted individual (1 Sam 2:7–8) or the oppressed nation (Deut 32:34–42). So fundamental is this aspect of God's power that the ability “to kill and make alive” becomes synonymous with the concept of divinity (2 Kgs 5:7). This same equation of life-giving power with divinity surfaces in a number of NT passages (Heb 11:19; Rom 4:17; 2 Cor 1:9; Mark 12:18–27), but it receives perhaps the fullest development in John 5, where its Christological implications are explored.

According to John 5, part of Jesus' defense against the charge of “making himself equal with God” (v 18) is to assert that his power is derivative, not autonomous, for it is “only what he sees the Father doing . . . that the Son does likewise” (v 19). As the first and primary example of what the Father does, the evangelist cites the power over life and death (v 21), a power now transferred to the Son. The Son therefore has life in himself (v 26) and this power is actualized for the believer in the present (v 24) and in the future (v 25) by hearing and heeding the voice of Jesus.

This emphasis on the words of Jesus as the locus of life, effected through a transfer of divine power from Father to Son, is particularly characteristic of John's gospel. Elsewhere it is the specific instance of God's resurrection of Jesus from the dead that shapes theological reflection on this issue. In Acts, for example, God's resurrection of Jesus is presented as the fulfillment of the fundamental promises and hopes of Israel (Acts 24:14–15; 26:6–8). With its

strong emphasis on salvation history, this book equates the rejection of the Christian message of Jesus' resurrection with the rejection of the central hope of Pharisaic Judaism, and the Jews who do so are presented as denying their own belief. Faith in God as the giver of life is here equivalent to faith in the resurrection of Jesus, and denial of the one is denial of the other.

The resurrection of Jesus not only gives confirmation and concrete shape to God's fundamental, life-giving nature and power, it also serves as the basis of the Christians' hope for their own resurrection, as Paul makes abundantly clear in his first letter to the Corinthians: "If Christ is preached as raised from the dead, how can some of you say that there is no resurrection of the dead?" (15:12). Paul also cites God's resurrection of Jesus from the dead as the basis for ethical admonitions about the attitude toward the body, which will be raised as a member of Christ (1 Cor 6:14); as the warrant for hope in the life-giving power of the indwelling Spirit (Rom 8:11) or hope in the face of tribulation (2 Cor 4:14); as the paradigm and theological basis of his own conversion from persecutor to apostle (Gal 1:1, 13-16); and as the theological premise for the central concept of the justification of the ungodly (Rom 4:16-17). In this last passage God's creative and resurrectional powers, two aspects of the same animating potentiality, coalesce once again when the justification of the ungodly is equated both with giving life to the dead and with calling into existence things that do not exist. The appeal to Jesus' resurrection as a specific instance of God's life-giving power is retained in post-Pauline writings, but the context becomes one of general benediction (Heb 13:20; 1 Pet 1:3) and the applications lose their Pauline concreteness.

In many of these citations of God's past resurrection of Jesus, the emphasis has shifted from the hope for a future reduplication of this event for the believer to a more metaphorical application to their lives in the present. This shift is most pronounced in baptismal contexts, where participation in the death and resurrection of Jesus yields new birth (1 Pet 1:3), new creation (2 Cor 5:17), new life (Rom 6:4; Col 2:12-13; Eph 2:1), even a new "man" (Eph 2:15) for the believer. Thus God's life-giving power, demonstrated in the resurrection of Jesus, is proclaimed to be effective here and now within the community, even in the evangelistic activity of the community (2 Cor 2:14-16; 2 Tim 1:10; John 5:24). In the more narrative context of the Gospels, this inbreaking of God's life-giving power into the present is suggested by the miracles, for even healings and exorcisms, not to mention resuscitations, are often presented as life-restoring acts (Mark 3:1-5; 5:1-20; 5:35-42; 9:26-27).

**3. The Sovereign Power of God.** When NT doxologies ascribe power and glory and might to God (Eph 3:20-21; 1 Pet 4:11; 5:11; Jude 25; Rev 5:13), they affirm traits absolutely inherent to the nature of divinity (see Rom 1:20). Epithets reflecting these attributes thus naturally accrue to God elsewhere: Almighty (Rev 1:8), Lord of Hosts (Rom 9:29; Jas 5:4), the Most High (Luke 1:32, 35, 76; Mark 5:7; Luke 8:28), the Sovereign (1 Tim 6:15; Rev 6:10), the Mighty One (Luke 1:49), Power (Mark 14:62), Majesty (Heb 1:3), King of ages or kings (1 Tim 1:17; 6:15; Rev 15:3), Lord of lords (1 Tim 6:15), Lord of the earth (Rev 11:4) or of heaven and earth (Matt 11:25). An

overwhelming impression of power is often conveyed, especially in Ephesians and Colossians, by piling up attributive phrases and descriptive adjectives (Eph 1:19; Col 1:11). It is, however, the various applications of this concept of sovereign power, not its mere presence, that give shape to the NT concept of God.

The NT gospels, in harmony with the Jewish and Greek traditions, affirm that all things are possible to God. Though infrequently cited, this motif does appear at important nodes of the gospel story. Thus in Luke it serves as a warrant for the miracle of the virgin birth (1:37), while in all three Synoptic Gospels, with their characteristic message that the last shall be first and the first last, it offers assurance that even the first, now become last, are not beyond salvation (Mark 10:27; Matt 19:26; Luke 18:27). Mark alone includes this motif as part of the Gethsemane prayer: "Abba, father, all things are possible to thee; remove this cup from me; yet not what I will, but what thou wilt" (Mark 14:36). In this Markan form, the prayer, which serves as the immediate introduction to the passion narrative, implies that subsequent events could have turned out differently, and thus that the death on the cross was the result of God's plan, not God's weakness. (This important point is lost with Matthew's more tentative form, "if it be possible," and Luke's shift of emphasis to volition, "if thou art willing.") Most characteristic, however, is the transferred application of this concept. If all things are possible with God, then all things are possible to those who believe (Mark 9:23; 11:22-24; Matt 17:20). The NT, however, is far more interested in God's power in the context of salvation history than in an absolute sense. Thus, more emphasis is placed on God's ability to fulfill promises.

The fulfillment of God's promise to Abraham, the leitmotif of the book of Genesis and the overarching and unifying theme of the Pentateuch and Hexateuch, figures prominently in some NT passages as well. The author of Hebrews, for example, refers to this ancient promise and to "the unchangeable character of (God's) purpose" in order to strengthen the faltering faith of his readers (6:13-20). "It is impossible," he insists, "that God should prove false" so "we have this (promise) as a sure and steadfast anchor of the soul." In similar fashion, but without a reference to Abraham, Paul closes a petition to God with a reference to the conviction that grounds hope and motivates prayer: "He who calls you is faithful, and he will do it" (1 Thess 5:24). Elsewhere Paul, like the author of Hebrews, reflects on the promise to Abraham, but he shifts the emphasis somewhat from God's steadfastness (which is nevertheless still a prominent idea) to the nature of Abraham's faith (Romans 4). Here Abraham's unwavering confidence in the promise (v 20), his absolute conviction "that God was able to do what he had promised" (v 21), becomes a paradigm for Christian faith in the new promise that Jesus "was put to death for our transgressions and raised for our iniquities" (v 25).

The opening thanksgiving of Ephesians evolves into an eloquent discourse on the firm purpose of God's will, but the reference point is no longer historical (Abraham), but cosmic (1:3-14). Established before the foundation of the world, God's will for cosmic unity is realized in the "fulness of time," a period and a unity already experienced in the

Church but with full consummation yet to come (see also Eph 3:4–6). A similar theological presupposition but a different concern motivates the author of Acts, who takes pains to emphasize that the death of Jesus, indeed the entire history of salvation, was no historical accident or theological tragedy, but in full accord with the definite plan, foreknowledge, and “counsel” of God (2:23; 4:28; 5:38–39; 13:36).

With only a slight shift of emphasis, the conviction that events occur according to the plan of God leads to the conviction that events are predestined by God, an idea that surfaces repeatedly and with diverse application in the NT. Not just Ephesians but other documents as well assume that events, especially the Christ event, follow a timetable established by God (Acts 1:7; Mark 13:32; Gal 4:2–4; 1 Pet 1:20). Even the fates of various individuals and groups have been ordained by God. This strongly predestinarian concept surfaces most prominently in documents written during times of persecution, where it serves as a source of solace and hope to those who are suffering (1 Pet 1:2; 2:8; Rev 13:8; 17:8; John 6:37, 44, 65; 17:6). The classical text for this doctrine, however, is Romans 9–11, where the situation is not one of persecution but of reflection on the mystery of God’s plan of salvation as reflected in the pattern of missionary success. At a time of great tension between the Jewish and gentile elements within the Church and with the gentiles in the ascendancy, Paul reflects on the theme expressed in 9:6 and 11:1: “Has God rejected his people?” The answer is couched in terms of double predestination, with the two groups serving as instruments (or vessels) of God’s will. Yet the emphasis here is not on predestination per se, but on God’s power, faithfulness, and autonomy of purpose. The current gentile prominence, Paul asserts, is not a sign of injustice, unfaithfulness, or partiality, but is consistent with God’s will and part of a larger plan to effect mercy upon all (11:32).

As the preceding examples show, God’s power was rarely conceived as an abstract quality in the NT. Rather, it served in various ways as the foundation for petitions, the basis for hope, or the source of consolation. In all these applications there is implied or explicit opposition to God’s power, opposition over which God will prevail. Sometimes this opposition is personified as Satan (Matt 4:1 and par.; Luke 8:12; 1 Thess 2:18) or Beelzebul (Matt 10:25; 12:24 and par.) or identified with the serpent of Genesis and the dragon of primordial chaos (Rev 12:3–17; 20:2). Other texts define God’s opposition in terms of titles like the Ruler of This World (John 12:31; 14:30; cf. 2 Cor 4:4; 1 Cor 2:12), the Destroyer (1 Cor 10:10), the Evil One (Matt 6:13; 2 Thess 3:3; 1 John 2:13), or the Antichrist (1 John 2:18–22; 2 John 7), or describe it more abstractly as principalities and powers (1 Cor 15:24–27; Eph 1:21–22; 1 Pet 3:22) or simply as sin (Rom 5:21; 6:12–23). In every case, however, the point is strongly made that God will prevail over this opposition at the end. This eschatological component of God’s power is familiar from Jewish apocalyptic, but in the NT this confidence in the final victory is linked to what God has already accomplished in Jesus. First the exorcisms (Mark 3:21–27 and par.) and then the resurrection (1 Cor 15:20–26; Eph 1:20–23; 1 Pet 3:21–22) were viewed as proof that the power of opposition had already been broken.

If one aspect of the NT message is that God will overcome all opposition in a final manifestation of divine power, another important component of that message is that this power is now, in this age, often paradoxically revealed in weakness. It is in Paul’s letters to Corinth, a congregation predisposed to boasting over powerful manifestations of the Spirit, that this idea is most eloquently developed in terms of the theological implications of the crucifixion. The apparent weakness and folly of the message of the cross (1:18–25), which is mirrored by the weakness of the Christian community at Corinth (1:26–31) and of the apostle himself (2:1–5), leave no doubt that the effectiveness of the Christian mission rests “not in the wisdom of men but in the power of God” (2:5; cf. 2 Cor 4:7–12; 6:3–10; 11:21–12:10).

The paradox of the cross (strength revealed in weakness) exists, of course, only in this age. In the future age or the heavenly world, what appears now as paradox will appear then in the form of reversal. What now exists in the guise of weakness, whether the crucified Christ, the apostle, or the individual Christian or Christian community, will then appear in glory (2 Cor 13:4; 1 Cor 4:1–5; 15:43). This reversal theme, inseparable from the very heart of the Christian message of the crucifixion and resurrection, is also a strong feature of some sayings attributed to Jesus. Briefly summarized in the eschatological inversion formula, “many that are first will be last, and the last first” (Mark 10:31; Matt 19:30; 20:16; Luke 13:30), it appears in many guises throughout the synoptic tradition but most prominently perhaps in Luke. First announced there in the Magnificat (1:51–53), the theme of the exaltation of the humble reappears in the opening scene of Jesus’ ministry (4:18), in the Lukan form of the Beatitudes (6:20–26), and in the parables of Luke 14–16. In the speeches of Acts a different form of the same motif appears. There the focus is on the inversion inherent in Jesus’ crucifixion and resurrection, not the promised exaltation of the socially deprived, with the emphasis placed on the responsible agents, not on the inversion itself: “This Jesus . . . you crucified and killed by the hands of lawless men. But God raised him up” (2:23–24, 36; 4:10).

The NT speaks not only of an eschatological reversal of power, but also of an earlier transfer of power from God to Christ and from Christ to the disciples. The first transferral pattern is particularly prominent in the Fourth Gospel (John 5:20, 27; 10:18; 17:2; cf. Matt 11:27), while the second characterizes the various commissioning scenes in the gospels (Mark 3:15; 6:7; Matt 10:1; Luke 10:19; John 17:22) and seems to have influenced Paul’s sense of apostolic authority (see, e.g., Rom 15:18–21; 1 Cor 4:19–20; 5:3–5; 2 Cor 12:11–12). Christians experience this transferred power in various ways. The Corinthians experienced it as wisdom (1 Cor 3:18–20) and knowledge (1 Cor 8:1) and Paul counters with the argument that it is authentically experienced as power in weakness or the power of endurance (2 Cor 4:7–12; cf. Mark 13:11–13). In the Fourth Gospel power seems to be internalized and identified with the indwelling presence of God (John 14–16). More widespread, especially in Acts, is the conviction that God’s power is dramatically experienced as spiritual gifts or the working of signs and miracles (Mark 16:17–18; Acts 2:22; 8:9–13; 2 Cor 12:12; Gal 3:5), or more prag-

matically in the success of the Christian mission (1 Cor 3:5–9; Acts, *passim*). Paul can even speak of the gospel message itself (Rom 1:16; 1 Thess 1:5) and the boldness of its promulgators (1 Thess 2:2; 2 Cor 3:4–6; 10:3–4) as the effective locus of the power of God.

**4. The Righteous Judge.** God has created the world, God rules the world in sovereign power, and ultimately God will judge the world. Though the actual eschatological judgment has, according to many NT texts, been transferred to Christ (Acts 10:42; 17:31; 1 Cor 4:5; 2 Tim 4:1; John 5:22), the notion of God's cosmic judicial authority remains axiomatic (Heb 10:30; 11:6; Rom 3:6; Jas 4:12; 2 Tim 4:8). Threatening references to the Day of Judgment dramatically underscore the negative implications of this authority for the unbelieving world (Matt 10:15; 11:24; 12:41–42; Heb 10:26–27), but its positive side actually receives greater theological development, for the Day of Judgment reveals not only God's wrath (Rom 2:18), but also God's intrinsic justice and righteousness. While it is affirmed that all of God's actions are manifestations of this justice (Rev 15:3–4; cf. 16:7), it is in the eschatological judgment that this justice is fully and finally revealed and thus it is in discussions of this judgment that various aspects of God's justice are most fully explored.

The absolute and universal character of divine justice demands, for example, that God show no partiality in his judgment. In Col 3:25 and Eph 6:9 this idea serves to warn various social classes not to let the false expectation of privileged treatment erode their ethical behavior, though Colossians presupposes that it is the lower classes that expect this treatment (in accord with the principle of eschatological inversion), while the opposite is true in Ephesians. In Romans, Paul addresses ethnic groups, not social classes, and declares the fundamental dichotomy between Jew and Greek overcome through God's judicial impartiality (2:6–11). This impartiality manifests itself not only in judgment but also in grace (3:22; cf. Acts 10:34–35), though it sometimes receives a Christological rather than a theological grounding (Rom 10:12; Gal 3:28).

Righteous judgment demands not only an impartial judge but also a full disclosure of evidence, and it is thus presupposed that God sees in secret (Matt 6:4, 6, 18; Rom 2:15–16), knows the innermost purposes of the heart (1 Cor 4:5; Luke 16:15; Acts 15:8; 1 Thess 2:4), and brings all one's deeds to light (1 Cor 3:13; John 3:19–21). Because of this, retribution can be meted out fully and justly in accordance with deeds (Rom 2:6; 1 Cor 3:8–15; 2 Cor 5:10; 11:15; 1 Pet 1:17; Rev 20:12; Matt 16:27; Eph 6:8; 2 Tim 4:14). Often the principle of measure-for-measure retribution is cited to underscore the absolute justice of divine retribution. Reward and punishment are not simply appropriate to, but in exact accordance with, one's actions. The punishment, it is affirmed, perfectly fits the crime (Matt 7:2; 26:52; Rev 13:10; 2 Cor 9:6; Jas 2:13; 2 Thess 1:5–7).

This widespread attestation of a final judgment on the basis of deeds generates some tension with the equally widespread emphasis on God's grace, particularly within the Pauline tradition. Paul, however, presents righteousness not only as a juridical attribute of God (Rom 1:17; 3:21), but also as a gift from God (Rom 3:22; Phil 3:9), available through the atoning and reconciling power of the

cross to all who believe. In this context, righteousness reflects God's saving activity and rests on the decisive thing that has been accomplished in Christ. Yet it also looks forward to a final consummation, and in this sense remains a hope that embraces the judgment to come (Rom 5:9, 17–19). Thus, the expectation of a final judgment remains firm, but equally firm is the hope that God's righteousness, revealed in Christ and received by faith, will prove to be a power of obedience that will deliver the believer in the final judgment.

Like Paul, the Fourth Gospel retains a complex lawsuit motif with God presiding as judge. But whereas Paul remained highly optimistic about the outcome of this judgment for Christians, even while leaving open the final verdict (1 Cor 3:12–15; 4:3–5), the Fourth Gospel finds judgment already effected at the moment of response to Jesus and to his word (John 3:18–19), with a heavy predestinarian and somewhat pessimistic flavor to the discussion of who is "of the truth" (18:37; cf. 6:65; 10:14, 27). Included in the Johannine community are many false disciples (1 John 2:18–19; cf. John 8:31–38), whose identification and separation will be accomplished by a final judgment (John 12:48; 1 John 2:28–29). Other NT books also assert that participation in the community of faith does not provide certitude of salvation, and the concept of divine justice and judgment, once again appearing as a threat, evokes a demand for righteousness and repentance among the faithful, with more pessimism than Paul evinced about the final verdict (Heb 2:1; 12:25–29; Matt 7:21–23; 13:47–50; 1 Tim 5:24; 2 Tim 2:20–21).

**5. The Loving Father.** Though very characteristic of the NT, references to God as Father are not unique to it. Zeus, for example, was hailed by the Greeks as the Father of gods and men, and many of the general affirmations of divine fatherhood in the NT are very close to this use of the term to designate God as the physical cause of the world and all that is in it (1 Cor 8:6; Jas 1:17; Eph 3:14–15; cf. Acts 17:28). While some metaphorical uses of the term suggest that God is the ultimate or original manifestation of a particular quality (Father of mercies in 2 Cor 1:3; Father of glory in Eph 1:17), the specifically Christian usage centers on the concept of God as the Father of Jesus. This messianic application is prepared for by 2 Sam 7:14, which asserts that Israel's anointed king will be God's "son" (cf. Psalm 2:7), but its remarkable prominence in the NT was probably encouraged by Jesus' own use of *ʾabbā* (father) in prayer. References to "my father" or (in John) "the father" are pervasive in the Gospels while the phrase "Father of our Lord Jesus Christ" occurs in the NT letters as a formulaic part of benedictions and thanksgivings (Rom 15:6; 2 Cor 1:3; Eph 1:3; Col 1:3). This father-language suggests a clear distinction between God and Jesus, but at the same time a close relationship that is enhanced in the gospel of John by frequent use of the adjective *monogenēs* to suggest the uniqueness of Jesus' sonship (John 1:14, 18; 3:16, 18; 1 John 4:9). An important corollary of the father-son relationship is that, because of the loving intimacy of this relationship (John 3:35; Mark 1:11; Col 1:13), each one is supremely able to reveal the other. The Father's revelation of the Son is associated primarily with the cosmic aspects of the baptism (Mark 1:11; Matt 3:17), transfiguration (Mark 9:7), resurrection

appearances (Acts 10:40; Gal 1:16), and parousia (2 Thess 1:7; 1 Cor 1:7; 1 Tim 6:14–15; 1 Pet 1:7, 13). The Fourth Gospel, on the other hand, emphasizes that God is revealed in the encounter with Jesus (John 1:18; 12:45; 14:9; cf. Matt 11:25–27 and Luke 10:21–22) while Paul speaks of this revelation as occurring in the proclamation of the message about Jesus (Rom 1:17; 2 Cor 4:5–6).

God, however, is not only the Father of Jesus but also the Father of all believers. This concept of God as the "father" of a specific group has its roots in the OT concept of election, though the actual kinship terminology surfaced only occasionally in that context (Exod 4:22; Hos 11:1). In the NT, however, it is all-pervasive, from the "Our Father" of the Lord's Prayer to absolute references to the Father in letter openings and benedictions. Paul describes the relationship of believers to God in terms of adoption (Gal 4:4–7; Rom 8:23), a metaphor that marks the contrast between former and present status. The Johannine literature prefers the concept of begetting (1 John 2:29; 3:9–10; 4:7; cf. John 3:3–9), thereby placing the emphasis on the fact that the Christian's new origin is in God.

As Father, God can be a disciplinarian (Heb 12:7), but God's primary parental qualities are love (1 John 3:1; 2 Thess 2:16; Eph 2:4; Rom 8:38–39) and compassion (Matt 6:25–32; 10:29–31). Through the reconciling power of the cross, God's fatherly love embraces even sinners (Rom 5:8; Eph 2:11–18; cf. Luke 15:11–32), an idea that is constitutive and characteristic of the new covenant. God's offspring, moreover, should imitate the Father's love, and thus Christians are called to remember the mercy extended to them and to show the same magnanimous love to others, thereby revealing themselves as true children of God (Matt 5:9; 5:44–48; Luke 6:35–36; Eph 4:31–5:2).

#### D. Trinitarian Formulations

One does not find in the NT the trinitarian paradox of the coexistence of the Father, Son, and Spirit within a divine unity, the mystery of the three in one, yet one does find there the data that serve as the foundation of this later dogmatic formulation. Though each member of the triad has its own identity, each is also and most frequently identified in relation to the others. The Spirit appears in some texts as the autonomous agent of prophecy (Acts 1:16; Heb 3:7); the vehicle of sanctification (Rom 15:16; 1 Pet 1:2), moral integrity (Rom 8:4; Gal 5:16–25), and intercession (Rom 8:27); the sign of God's acceptance (Acts 15:8; Gal 3:2); and a guarantee of future salvation (Rom 5:3–5; 2 Cor 5:5). It is also, however, clearly designated as the Spirit of God (1 Cor 2:11–12; Rom 8:9–17), the Spirit sent by God that represents in some sense God's active and indwelling presence. Yet, the Spirit is also called the Spirit of Christ, and there is a remarkable degree of fluidity in these two designations (Rom 8:9). In this guise the Spirit is sent by God as Christ's successor (John 14:16), as his witness (John 15:26; cf. Mark 13:11), and as evidence of his exaltation (Acts 2:32–33).

Likewise Jesus, while possessing his own identity as the prophet from Nazareth (Luke 24:19), is clearly placed in the intimate relation of sonship with God, who sent and commissioned him (John 3:34), attested to him (Acts 2:22), dwelt in him (2 Cor 5:19; John 17:21), vindicated and exalted him (Phil 2:9; Acts 5:31), and will through him

judge the world (Acts 17:31). On the other hand, Jesus was conceived by the Holy Spirit (Luke 1:35; Matt 1:20), received the Spirit at baptism (Mark 1:10), and was resurrected "according to the Spirit" (Rom 1:4) or "in the Spirit" (1 Tim 3:16).

Though all of these texts point to an intimate relationship of God, Christ, and the Holy Spirit, a formal triadic coordination of the three is found in only a few places. Pair-wise coordination is more frequent. God and Christ, for example, often appear in parallel construction (John 14:1; Rom 1:7; Rev 5:13) as do, somewhat less frequently, Christ and the Spirit (1 Cor 6:11; Rom 15:30; Heb 10:29). The baptismal commission in Matt 28:19 and the apostolic benediction in 2 Cor 13:14 are the clearest examples of triadic coordination, though other texts of somewhat looser formulation (1 Cor 12:4–6; Jude 20–21; 1 Pet 1:2; Rev 1:4–7) probably reveal its influence. Even these texts, however, do not formalize the relationship as that of one in three, but assert somewhat more simply that the work of the three is the same work, whether it is perceived in terms of the creative and ruling power of the universe, the crucified and vindicated messiah, or the religious experience of the community.

**GOD MOST HIGH.** See NAMES OF GOD IN THE OT; MOST HIGH.

**GOEL HADDAM** [Heb *gō'el haddam*]. See BLOOD, AVENGER OF.

**GOG (PERSON)** [Heb *gōg*]. 1. A Reubenite, descended from Joel (1 Chr 5:4). Gog is second in the list of the sons, or descendants, of Joel. The list may represent a line of Reubenite chieftains (Ackroyd *Chronicles Ezra Nehemiah* TBC, 36). The name appears after Shemaiah and before Shimei. Others in the list include Micah, Reaiah, Baal, and Beerah, who was taken into exile by the Assyrians. As the text does not state Joel's relation to Reuben, and since the use of "son" in Hebrew is somewhat broader than in English, it is impossible to pinpoint Gog's temporal setting. The list ends with the Exile, but the name Baal may point to the presence of an older tradition (Myers *1 Chronicles* AB, 36–37). Apparently Gog was a member of the clans of seminomadic herdsmen who roamed the desert frontier E of Gilead, from Moab to the Euphrates (1 Chr 5:9–10). LXX has *Goug*, while Syriac renders the name *dw'g* (Doeg). Noth (*IPN* 223) traces the name to Akkadian *gāgu*, meaning "valuable gold object" (cf. CAD 5: 9 and HALAT 1: 174).

2. Chief prince of Meshech and Tubal, from the land of Magog (Ezek 38:2). See GOG AND MAGOG; MESHECH; TUBAL. In Ezekiel 38–39 God draws Gog out of Magog, with a large army. In later years he will advance against Israel from the far N (Ezek 38:8–15), thereby incurring God's wrath. God will judge him and his hordes with military and natural disasters (Ezek 38:18–22). Gog and the invading army will fall and be buried in Israel (Ezek 39:4–5, 11–15). In all of this God intends to vindicate his holiness before the nations (Ezek 38:16) that they might know that he is Yahweh (Ezek 38:21; 39:6, 22). The display of God's glory and judgment is linked with the restoration of Israel to a right relation with their Maker (Ezek 39:25–29).

Attempts to identify Gog have included proposals of connections with (1) Gyges, King of Lydia (*Gugu* of Ashurbanipal's records); (2) *Gaga*, a name in the Amarna correspondence for the nations of the N; (3) *Gaga*, a god from Ras Shamra writings; (4) a historical figure, especially Alexander; and (5) mythological sources, with Gog being a representation of the evil forces of darkness which range themselves against Yahweh and his people. None of these identifications has been demonstrated with certainty. Apparently, the name of Gog was derived from accounts of campaigns of N nations and in "some way unknown to us has come to be the name given to their commander-in-chief" (Eichrodt *Ezekiel* OTL, 522; cf. *IDB* 2: 436–37; Taylor *Ezekiel* TOTC, 244; HALAT 1: 174–75). What Gog symbolizes is clearer. He is the archetypal enemy from the N, the head of the forces of evil that rise against God and his people (Beasley-Murray *Revelation* NCBC, 297; Caird *Revelation* HNTC, 256).

3. A name, which, along with Magog, describes the nations of the earth (Rev 20:8). In Ezekiel Gog was the leader and Magog his land, while in Revelation both represent nations. As in Ezekiel vast hordes gather and are supernaturally destroyed. Satan deceives these evil nations and gathers them in great numbers for battle against Israel. Fire from heaven finally consumes these peoples

and God triumphs (Beasley-Murray *Revelation* NCBC, 297; Caird *Revelation* HNTC, 256–57; *ISBE* 2: 519–20).

KENNETH H. CUFFEY

**GOG AND MAGOG** [Heb *gōg* and *magōg*]. Names of a ruler, Gog, and his land, Magog, in the Bible. Gog is the leader, in Ezekiel 38 and 39, of an invading army from "the uttermost parts of the north" who will attack Israel "in the latter years." See GOG (PERSON) and MAGOG (PERSON). In language similar to that found in later apocalyptic writings, Ezekiel describes God's complete devastation of Gog and his forces upon the mountains of Israel. The defeat of Gog will serve as a vindication of God's holiness and a demonstration of God's might. God's victory will make plain to all the nations of the earth that the people of Israel had been sent into Babylonian captivity because of their sinfulness and not because of God's weakness or unconcern. Now God has restored them to their own land and will protect them.

Various attempts have been made to explain the origin of the name Gog. Some scholars have looked for a historical figure as the source of the term. Among the many suggestions which have been proposed, the most convincing historical referent is the 7th-century B.C.E. Lydian king Gyges. Other scholars have explained the name mythologically, derived from the Sumerian word for darkness or from the name of the Akkadian god Gaga.

Ezekiel has likely combined earlier traditions which spoke of an enemy from the north who would bring destruction to the Israelites (cf. Jer 1:13–15; 4:6) with the prophecy of Isaiah that God would destroy the enemies of Israel upon the mountains (Isa 14:24). These prophecies, which for Ezekiel are still unfulfilled, will take place "in the latter days" when God's salvation of Israel will become evident to all the nations. Ezekiel has borrowed the name of Gyges of Lydia to describe this mysterious enemy of God, partly because Gyges had a reputation as a powerful king from the N. In the Ezekiel oracles the figure of Gog has assumed mythical proportions (Wevers *Ezekiel* NCBC; Zimmerli *Ezekiel* Vol. 2 Hermeneia).

The word Magog, likely derived from an Akkadian term meaning "the land of Gyges (Gog)," occurs also in Gen 10:2 in the "Table of Nations." In Genesis and Ezekiel, Magog is grouped with Meshech and Tubal, regions in Asia Minor. For Ezekiel, Magog is simply the mysterious land of Gog located somewhere far to the N of Israel (*TDOT* 2: 419–25).

The author of the book of Revelation uses the Gog and Magog imagery to describe the final attack of the evil forces against the people of God following the millennial reign of Christ (Rev 20:8). Whereas in Ezekiel Gog is a person and Magog is a territory, in Revelation both Gog and Magog have become the names of evil nations. Both terms also appear in rabbinic writings in descriptions of eschatological events.

MITCHELL G. REDDISH

**GOIIM** (PLACE) [Heb *gōyīm*]. Ostensibly the kingdom of Tidal, one of the allies of Chedorlaomer and the "king of Goiim" (Gen 14:1, 9). Heb *gōyīm* means "nations." See NATIONS. QL Gen Apocryphon XXI:23–24 glossed *td' mlk gwym by dy hw' byn nhryn* "who was between the rivers" (i.e., in Mesopotamia). LXX, the Targums, and Vg rendered *gōyīm* by one of the equivalent terms in the respective languages. The old rapprochement of Goiim with cuneiform *Guti* or *Quti*, a people in the Zagros Mountains, by H. Rawlinson (ap. E. Schrader 1883: 137), was based only on a remote assonance. As long as Tidal (Tudhula of the "Chedorlaomer texts," cf. CHEDORLAOMER, sec. B) was identified with the Hittite Tudhaliyaš, it was logical to interpret "the nations" as the various ethnic groups of Anatolia, comparable to the "Islands of the Nations" of Gen 10:5. But if the plausible equation, by Tadmor (*EncMiqr* 8: 435–6), of Tidal (Tudhula) with Sennacherib is accepted, then "the nations" should be understood as the vast conglomerate of peoples in the Assyrian empire. The compiler of Genesis 14 may have been acquainted with the titles and self-praising epithets of Neo-Assyrian kings; cf., e.g., in the annals of Assurnasirpal: "the Sun of all peoples" and "who has brought under his sway the totality of all peoples" (*ARAB* I, §437) or, even closer: "Shalmaneser (III), king of all peoples, lord, priest of Assur, mighty king, king of all four regions, Sun of all peoples, despot of all lands" (*ARAB* I, §556).

A king of Goiim in Gilgal appears in the list of the kings vanquished by Joshua in the Heb text of Josh 12:23. LXX (codd. Vaticanus and Alexandrinus) has here *gōim* (var. *geei*) *tēs galilias*, which makes better sense in view of *gālil hag-gōyīm* "Galilee (lit. 'district') of nations" in Isa 8:23—Eng 9:1—and the Galilean city HAROSHETH-HA-GOIIM in Judg 4:2. The LXX reading has been accepted in RSV.

**GOLAN** (PLACE) [Heb *gōlān*]. A city of Manasseh in Bashan, the northernmost of the three Cities of Refuge E of the Jordan river (Deut 4:43; Josh 20:8). It is also a Levitical city assigned to the sons of Gershon (Josh 21:27; 1 Chr 6:71). A place by this name is mentioned by Eusebius as "a large village," and in the Talmudic literature the toponym Gavlana is also known in reference to Bashan/Batanea. Scholars tend to identify the town of Golan with Sahem el-Joulan (M.R. 238243), which lies on the E bank of the river el-ʿAllan.

In addition to the town Golan there exists a district of this name, which was known to Josephus as Gaulanitis. The district Golan lies W of Sahem el-Joulan. Therefore, some scholars have suggested reevaluating this identification and seeking the town of Golan within the boundaries of this region. Others have suggested retaining this identification and explaining it as political deviations that separated the town from its district.

It has been suggested that the region of Golan was apparently formed when the city Golan may have become

the capital of the land of Geshur as a result of the Geshurite and the Aramean conquest of the sixty cities in the region of Argob in Bashan during 886 B.C.E. (2 Chr 2:23). This annexed territory was then named after the newly captured city of Golan.

Other scholars maintain that the district Gaulanitis was formed during the 3d century B.C.E., due to the Ptolemaic administrative rearrangement of their estates. According to this theory, the large Assyro-Persian jurisdictional region of Carnaim was split into two zones, Batanea and Gaulanitis. This view, which is based primarily on the suffix *itis* common to Ptolemaic Egyptian districts, was rejected by other scholars on the grounds that there were insufficient 3d century B.C.E. settlements in the Golan to justify the split. They propose, instead, that the administrative district was established only by the beginning of the 1st century B.C.E. as a result of the Alexander Jannaeus campaign. The boundaries of the newly formed region embraced the territory from Mt. Hermon in the N to the Yarmuk river in the S, where it met the district of Gileaditis; it remained intact for a period of 18 years (81–63 B.C.E.). This region included the town of Golan and was named after it as a biblical reminiscent. After Pompey's campaign during 63 B.C.E. the Golan district was reduced in size due to territorial grants bestowed to Hippos in the S and to Phoenicia and the Ituraean estates in the N. The town of Golan was appended to the district of Batanea, which was formed during this transaction. This state of affairs remained all through the Roman and Byzantine periods.

Josephus speaks of the subdivision of Gaulanitis into Superior and Inferior. Many scholars postulate that these terms refer, respectively, to N and S, which correspond to the subdivision terms of Upper and Lower Galilee. However, other scholars claim that, unlike Galilee, these subdivision terms of Gaulanitis should correspond, respectively, to E and W. Since the Golan constituted, during the period of Josephus, the section of 20 km by 25 km between the jurisdictional territory of the city of Caesarea Paneas in the N and that of the city of Hippos in the S, the subdivision terminology conforms with the different elevations between E and W. The Golan is a basalt plateau which inclines from N–NE, where it rises to an average altitude of 900 m above sea level, to the S–SW, where it declines to an altitude of 200 m below sea level. Gaulanitis Superior is, therefore, at the E–NE corner, and Gaulanitis Inferior is the section near the Sea of Galilee. At the NE corner there is an inactive chain of volcanic cones whose activities in the past created thick basalt layers resulting in rocky terrain that was inadequate for intensive agriculture. This type of environment was suitable mainly for grazing land and pasture. The modern term Golan Heights refers to the region extending from the foothills of Mt. Hermon to the Yarmuk valley in the S, the Jordan river in the W, and the valley ʿAllan in the E. The Golan region today is much larger than that during the Roman period.

### A. Geographical Background

The Golan Heights is a modern geographical division. The name does not appear in this sense before the late 19th century C.E. (Schumacher 1888). The Golan Heights is the northwesternmost part of Transjordan, extending from the Yarmuk gorge in the S to the slopes of Mt. Hermon in the N. On the W, it borders the Jordan Rift with the Huleh basin and the Sea of Galilee. Its E border is the Raqad river, beyond which lies the Bashan (Batanea) and Jeidur (Trachona). The Golan Heights is a volcanic plateau that slopes from 900 m above sea level in the NE to 250 m above sea level in the S and to 200 m below sea

level in the area NE of the Sea of Galilee. In the N and S sections of the W plateau, steep slopes descend toward the Huleh and the Sea of Galilee, while the central section slopes gradually toward the Jordan river and the Bethsaida valley. On the E part of the plateau, volcanic cinder cones project from the surface (1100–1200 m); in the S, however, the ancient volcanoes have eroded to low-lying hills. The streams that flow on the plateau are very shallow, almost invisible, and are called Massil, but as they near the Jordan Rift they deepen and descend through waterfalls into deep canyons. In the S Golan, the wadis that drain into the Sea of Galilee and the Yarmuk gorge have carved wide basins. The basalt rock, which covers most of the surface of the Golan Heights, originated in a series of volcanic eruptions dating from 3.7 to 0.14 million years B.P. (Mor 1986).

The NE terrain is covered by relatively young basalt, the “Golan Formation” (0.35–0.14 M.Y.B.P.), that has eroded to red and brown Mediterranean soils. In the NW and central parts of the Golan Heights is the older “Ortal Formation” (1.61–0.74 M.Y.B.P.), mostly covered by shallow Grumosol and Protogrumosol soils. Noteworthy is the “Dalwe member” of the Ortal Formation, eroded into large boulders, the raw material of the “megalithic architecture” abounding in the Golan. In the S Golan Heights is the oldest “cover basalt” (3.7–2.8 M.Y.B.P.), overlain by deep and fertile Grumosol soils. On the slopes and river basins of S Golan, sedimentary rocks, older than the basalt (up to 4.5 M.Y.), are exposed, mainly Cretaceous and chalk rocks of the Miocene and Middle Pliocene ages. These are covered by colluvial/alluvial soils and rendzina.

The climate of the Golan Heights is Mediterranean, and the annual precipitation ranges from 350 mm in the S to 1200 mm in the NE. In ancient times the Golan was covered by Mediterranean forests that still survive in some nature reserves. In the N and above the 500-m elevation were forests of the evergreen oaks and worm oaks (*Quercus calliprinos* and *Q. boissieri*). In central Golan, open, parklike forests of Tabor oak (*Q. uhaburensis*) with rich pastures exist, while on the slopes and river basins of S Golan, a savanna of *Ziziphus* (*Z. spina Christi*) covers the area.

An understanding of the road system of the Golan Heights is important, as it impinges on the settlement pattern throughout the periods. Entrance from the N and S is blocked by the Mt. Hermon massif and the river Yarmuk, respectively, forcing all crossing roads to align along an E–W axis. Other natural obstacles such as the Huleh basin, the Jordan gorge, and the Sea of Galilee on the W, and the volcanic mountain chains and the Raqad canyon on the E, allow access to the Golan only in a few places. The four main routes, therefore, connect E and W from Damascus and the Bashan to the Mediterranean ports of Acre, Tyre, and Sidon. In the N, an important highway leads from Tyre through Baniyas (Panaes) to Damascus. In the center, the *Via Maris* passes from Acre (or from the S along the Jordan valley) through the Jisr Banat Ya‘aqub Bridge to Quneitra and hence to Damascus. A less important road connects the Galilee and the Golan from Capernaum through Bethsaida to Seleucia and Hushniyye in the central Golan. In the S, the road from Beth-shan through Zemakh climbs the Golan in several ascents to the Fig/Rafid thoroughfare and E to the Bashan.

From a geographical point of view, supported by the

settlement and political history of the area, the Golan Heights can be divided into three parts. This division has affected the settlement patterns, history, cultural characteristics, and administrative divisions of the area in most periods. The "south," from Wadi Shbeib-Samakh in the N to the Yarmuk gorge in the S, is a level fertile plain called by the Arabs "Ard el-Kamh" (Schumacher 1888: 20), i.e., the "land of grain," and it is the main agricultural zone of the Golan. The "south" is further subdivided into the cover basalt plateau and the sedimentary slopes of river basins. This part of the Golan Heights was continuously inhabited with no significant gaps in the occupational sequence.

The "center" extends from Wadi Samakh in the S to a N boundary line that starts at the S edge of the Huleh lake and extends E through Nahal Shelef, N of Kfar Naffah, and through Mt. Shifon and Tell Khari'a (8 km S of Quneitra) to meet Nahal Raqad. This area, mostly on Dalwe and Mueisseh basalt, is called by Schumacher (1888: 13) "Stony Jaulan" and is indeed rough and suitable mainly for grazing as its Arabic local name—Belad er-Rabi ("land of pasture")—testifies. The central region is also subdivided into E ("upper") and W ("lower") areas. The W part has an abundance of streams and springs which allows limited agriculture, including cereals in small plots and, especially, olive groves. This area has been inhabited in most archaeological periods, although with many gaps in the sequence; it was densely settled in the Roman-Byzantine period. The E part of central Golan lacks arable soils and water sources. The parts that were not thickly forested were very sparsely settled in Roman-Byzantine times by herders and horse-breeding farmers.

The "north," from Nahal Shelef in the S to Nahal Sa'ar and Mt. Hermon in the N, is mostly covered by young basalts and volcanoes, with almost no arable soils. The abundance of rain causes rapid soil erosion and encourages thick oak forests. The N is subdivided into several zones, some more suitable for human habitation than others. The westernmost zone, on the slopes toward the Huleh valley, has soils and some springs, and was always sparsely settled with only a handful of EB and Iron Age I sites. The central zone is covered by the "Ein Zivan" basalt member and is devoid of soils, springs, and any ancient sites; it is still thickly covered by forest. The easternmost zone has small arable plains between the volcanic mountains; lack of water sources, however, permitted only a few settlements (EB, Iron Age, and Hellenistic-Roman). In terms of settlement potential, the Golan Heights are divided therefore into three different regions: the fertile S, the pastureland in the center, and the forested N, each with its own environment and cultural characteristics.

## B. History of Exploration and Excavations

Although the Golan was described by early-19th-century travelers, the first systematic survey in the area was carried out in the 1880's by G. Schumacher (Schumacher 1886; 1888). Schumacher described the geography, flora, and population and provided a detailed description of some 150 settlements and ruins. The majority of these, however, date to the Roman-Byzantine period. The only pre-Roman remains he noted were the numerous dolmens (recorded in a dozen fields), interpreting them as tombs of ancient

bedouin. In subsequent surveys, he collected sherds at some sites which he dated to the Bronze Age. During the French Mandate Period and under the Syrian government, only Roman tombs which were unearched during construction works were recorded. In 1967, a systematic survey was conducted by two teams headed by C. Epstein and S. Gutman (Epstein and Gutman 1972). For the first time, pre-Hellenistic sites were identified by surface sharding or by "megalithic" masonry style. The 1967–68 survey recorded sites from the Paleolithic period through the Iron Age. Since 1969, surveys conducted by C. Epstein, M. Hartal, S. Barlev, and Z. Ma'oz have added scores of sites dating from early periods and have provided much environmental and archaeological data. The first excavations were conducted at Roman-Byzantine sites such as Jukhader, Qasrin, and Gamla by Urman and Gutman, as well as at some 30 dolmens, dating to the EB IV, which were explored and excavated by C. Epstein from 1969 to 1973. Epstein also excavated several Chalcolithic settlements in 1973–86. Subsequent to the discovery of Tel Soreg in S Golan, which D. Ben-Ami has suggested was biblical Aphek, extensive archaeological excavations were begun at the site by M. Kochavi. Additional seasons of research in the vicinity by Kochavi exposed a round fortress at Tel Hadar (Sheikh Hader), dating from the 12th century B.C.E., that was destroyed by a heavy fire in the beginning of the 11th century, and an EB enclosure at Mitham Leviah (Lawiyye; Kochavi 1989: 6–11). Excavations and surveys are currently being carried out and will no doubt contribute to a broader and deeper understanding of the nature and patterns of settlement in the area.

## C. Archaeological Finds and History

**1. Paleolithic to Neolithic Periods.** The earliest human remains unearched in the Golan date to the Upper Paleolithic period. At Berekhat Ram (E of Mas'ada), a paleosol layer containing flints and basalt implements from the Acheulian culture, sandwiched between two lava flows, indicates that the Golan was inhabited over a quarter of a million years ago. Surface surveys have revealed several other sites that belong to the Acheulian horizon. The Mousterian culture is represented in an open-air site at Biq'at Quneitra (Goren-Inbar 1989) and a few other small workshops (approximately 50,000 Y.B.P.).

The site of Moujhaya in the S Golan (excavated by A. Gofer) is a large site belonging to the Neolithic period. Other scattered sites have yielded Neolithic tools—flint axes, arrowheads, and other implements.

**2. Chalcolithic Period.** In 1973, a Chalcolithic site dating from the 5th–4th millennium B.C.E. was first exposed in the Golan. The Chalcolithic culture appeared in the Golan after a long gap, since no remains of the Pottery Neolithic or Wadi Rabah culture have been found (Epstein 1978b). Between 1973 and 1988, excavations and trial excavations were carried out at 15 sites, exposing domestic buildings and a unique material culture, but one with affinities to the Chalcolithic material culture found in other areas of Israel and Jordan. Extensive surveys have discovered many additional sites, some of which have been excavated, and no doubt more sites will yet be revealed.

So far 25 Chalcolithic sites have been found, mainly in the central Golan (Epstein 1986: 34–35). They are located

on Dalwe basalt, on the more gentle slopes, and mainly at an altitude between 445 and 555 m above sea level. They tend to be adjacent to wadis or springs in regions with about 600 mm precipitation per annum. The extensive pasturelands and the wetter parts of the central Golan were exploited in the Chalcolithic period for crop cultivation. The environment was suited for a population whose economy was based on cattle grazing and agriculture.

All the sites are unwalled and spread over a large area. There are villages of between 15 and 40 houses, as well as some smaller hamlets and individual farms. On some sites, the houses are built in two parallel rows with adjacent houses sharing a sidewall. Some villages flank both sides of the wadis with houses opposite one another. On three sites, well-constructed storage bins were found. Some sites are located next to seasonal riverbeds, with perennial streams some distance from the sites.

All the houses have a broad-room house plan with basalt walls constructed of dry masonry. The average size of a house is 15 m × 6 m. The long walls are orientated E–W, the general direction of the slopes, and the entrance is from the S. Floors are part paved, part bedrock, and there is sometimes a bench at the base of the long walls. The houses have internal walls, either forming a long narrow back room or smaller side rooms. The internal divisions must have facilitated the roofing, which seems to have covered the whole area of the house.

All the Chalcolithic sites have a large variety of ceramic, basalt, and flint vessels, showing affinities to the finds at Chalcolithic sites in other regions, but with many features unique to the Golan. Many vessels are decorated with bands of rope impressions, incisions, and pierced decorations. The vessels are handmade, but with some use of a handwheel evident on the upper part of the larger vessels. The local red clay of volcanic origin contains many grits, including basalt chips. Particularly noteworthy is the large number of pithoi for the storage of grain. Other vessels include jugs, bowls, hole-mouth jars, spouted jars, bowls with fenestrated pedestals ("incense-burners"), and loom-weights for weaving wool. There are significantly few vessels for everyday use, such as cups and cooking bowls.

In the volcanic Golan, basalt vessels are commonplace, the repertoire including bowls, basins, kraters, grinding stones, and mortised stones. Basalt tools, including agricultural implements, hammers, hoes, weights, and hoe-weights, also occur. The flint implements include many types characteristic of the period, including axes, scrapers, awls, fan-scrapers, and sickle blades. In addition, worthy of note are perforated implements of laminated flint cut into piriform and round shapes, found mainly in the N (Epstein and Noy 1988).

A unique feature of the Golan Chalcolithic culture is the basalt pillar figures, of which over 50 examples are known (Epstein 1982; 1988). Many were excavated in reliable house contexts or discovered within Chalcolithic sites. The pillar figures are cylindrical, the top of each forming a shallow offering bowl. Most have facial features with a protruding nose, others are horned, and some have a goat beard. It is generally agreed that the pillar figures have cultic significance, and since they were placed in houses, it is assumed that they played a part in the fertility cult. The horned and bearded figures were probably asso-

ciated with fertility in the herds, and those without horns probably with the general concept of life, fertility, and abundance in both man and crops.

A small quantity of seeds has been found at the sites, including peas, lentils, and bak<sup>c</sup>a. The charred remains of domestic wheat (*Triticum dicoccum*) were found in a storage bin, but the most widespread organic remains are olive pits. Moreover, 90 percent of some 30 samples of burnt wood remains examined are olive. Few animal bones were found in the houses, but those remains include goat and sheep teeth, with a few cow bones and teeth of wild boar and ass. No human bones or burials can be related to this period.

There is no evidence to suggest that the Chalcolithic period in the Golan ended violently. It is unclear why the inhabitants left their villages, abandoning their large storage vessels and heavy equipment, including their house gods. Perhaps a prolonged drought resulted in the deterioration of the economic base. On the basis of the lack of changes and developments in the houses and pottery vessels, it appears that the culture was a single phase, lasting 200–300 years. Calibrated C<sub>14</sub> dates of charred wood provide a date of 4140 ± 150 B.C.E.; and burned wheat grains provide a calibrated date of 3800 ± 100 B.C.E.

**3. Early Bronze Age.** The available archaeological evidence suggests an occupational gap after the Chalcolithic period in most of the Golan. In the S Golan, however, are three EB I sites; they are adjacent to the Yarmuk river and Nahal Meizar. At the site on the bank of the Yarmuk, building remains and pottery characteristic of the EB I were revealed in a trial excavation (Epstein 1985c), and the site appears to have been extensive.

Our knowledge of the EB II occupation is based mainly on the material from surveys (Epstein and Gutman 1972; Hartal 1989). From this period, 42 sites have been found throughout the Golan: 7 in the S, 12 in the center, 17 in the N, and 6 more at the foot of Mt. Hermon. The sites include settlements and large enclosures (Heb *mitham*). At the fortified settlements (e.g., Za'arta in the N and Zalabeh in the central Golan), sections of fortification walls and building remains are extant. Other sites have building remains, but thus far no evidence of enclosing walls (e.g., Seleucia and Gamla in the central Golan and at Kh. Hutiyye in the S). The enclosure sites have massive fortifications, which sometimes incorporate natural elements, such as rocks, cliffs, and abysses overhanging wadis. The sites of Mitham Yitzhaki in the central Golan and Mitham Leviah and Mitham Bardawil in the S are protected by steep precipices. Other enclosures erected in areas without natural fortifications are surrounded on all four sides by solid fortifications, as at Sha'abniah and Es-Sur in the central Golan.

Excavations have recently been carried out at Mitham Leviah (Lawiyye; Kochavi 1989). The site is located on an elongated spur overlooking Nahal Kanaf to the N and Nahal Samakh to the S, and is protected by steep precipices on the N, S, and W. A long, high heap of stones separates the enclosure from the plateau on the E, and two similar stone heaps run across the center of the site and close to the W end. Excavation of the central heap exposed a substantial stone wall, 4 m thick. A section excavated on the W has exposed rectangular houses with stone walls

from the EB III together with KHIRBET KERAK WARE found in situ. Pottery from the EB IA, EB IB, EB II, and EB IV was also found in this area, indicating habitation continuity at the site. At the other enclosure sites ceramic material dating to the EB II has also been found. Es-Sur is attributed to the same period on the basis of similarity of construction of its walls. Mitham Bardawil, however, produced only a few EB II sherds, but an abundance of sherds from EB IV, perhaps attesting to its construction or reoccupation in the latter period. It is clear that the enclosures sometimes incorporated buildings, as at Mitham Leviah and es-Sur, but the function of the enclosures has not yet been clarified. They may either have been fortified areas, occupied by the unsettled local pastoralist population and their flocks in times of danger, or walled cities.

An unusual and unique site of the EB II is RUJM EL-HIRI, situated on a plateau, through which flows Nahal Daliyyot (Kochavi 1989; Zohar 1989). This massive construction of huge, unworked basalt stones is similar to the enclosures, but in other respects is unique. The site consists of a huge central tumulus, measuring 20–25 m in diameter and 7 m high, surrounded by four concentric walls, the outer of which is 155 m in diameter, and is interrupted in two places by entryways. So far no stratigraphic sequences have been found to help date the site, although a small trial excavation has been conducted (which did yield a few EB II and Iron Age I sherds). The function of the site has also not yet been established, but it is likely that the site was a ceremonial center with symbolic significance for certain social groups.

Only recently has evidence been found to indicate that settlements continued into the EB III in the Golan; these include Gamla and Mitham Leviah (Kochavi 1989: 6). The nature of this period, the pattern of settlement, and the causes leading to the termination of the period, however, cannot yet be established.

**4. Early Bronze Age IV (ca. 2350–1950 B.C.E.).** At the end of the 3d millennium, there was a significant change in the settlement pattern of the Golan. No occupation sites have been located in the N and central Golan. In the S, eight sites have been identified, of which three are burial sites. It seems that during this period pastoralists, whose origins have not yet been fully established, moved through the N and central Golan and did not construct any permanent settlements. On the other hand, they erected hundreds of burials in the form of dolmens, standing in groups, and sometimes concentrated together in "dolmen fields" (Epstein 1985a). So far over 30 dolmens have been excavated at various sites, and many others have been surveyed. The dolmens may be dated by the earliest finds exposed on their floors, which are funerary goods accompanying secondary burials and date to the end of the 3d and beginning of the 2d millennium B.C.E.

The typical Golan dolmen is not the picturesque trilithic "stone table," consisting of two stone uprights with a third horizontal stone laid on top, as is suggested by the ancient Bretonic word. The typical dolmens are small, rectangular, or sometimes trapezoid burial chambers, measuring ca. 1.5 m × 3.5 m, with an entrance on one of the short sides. They are built of unworked basalt stones, with monolithic slabs as the lower walls, balanced by smaller stones, and with paved floors. The roofs are of large stones rising in

step form from the narrow sides to the center, with a single stone on top, forming a domed ceiling inside the chamber. The dolmens are usually surrounded by an oval stone heap, or tumulus, supported at the bottom by a circular wall; in many cases only the top roof-stone is visible, while in others the dolmen is completely hidden beneath the tumulus. See DOLMEN.

The earliest finds from the dolmens date from the EB IV and include jars, spouted jars, a bottle, pedestal lamps, and round, handleless cooking pots. The metal finds are mainly of copper and include a long pin with a bent head, pins with points at both ends, a bracelet and ring, and weapons, such as a dagger, a socketed spear, and leaf-shaped blades. These ceramic and metal types have clear parallels in assemblages from burials of this period from N Israel and Syria (e.g., Megiddo and Ugarit). Several dolmens were later reused for burials, both in ancient and modern times.

It is important to emphasize that it was the volcanic nature of the Golan that made possible the construction of dolmens. Great effort and technical knowledge were required for the construction of the graves, indicating the importance accorded to the subject of burial by people who otherwise apparently had no permanent dwellings.

**5. Middle Bronze and Late Bronze Ages.** Following the EB IV, there seems to have been an occupation gap in the Golan of about 150 years—no MB I settlements have been found. The only finds are a few pottery vessels, found in a dolmen in secondary use, which are characteristic of the transition between the MB I and MB II, with parallels in graves at Ginossar, Hazor, Dan, and other sites in the N (Epstein 1985a).

The beginning of the MB II witnesses the resettlement of the Golan. About 40 sites, including graves, have been found, mostly identified in surveys (Epstein and Gutman 1972; Hartal 1989), and occasionally examined in small trial excavations. The large number of sites parallels the increased number of MB II sites throughout Palestine. In the N and central Golan there are very few settlements—11 in the N and only 4 in the center, few of which have left substantial architectural remains. In contrast, about 25 sites are concentrated in the S Golan, probably because of the possibility of hewing impervious wells for water storage out of the limestone rock. These often-fortified settlements were established at strategic locations on the high plateau between the Sea of Galilee and Nahal Raqad, and were apparently used for defense and to control trade routes; a particularly large concentration of sites stood on the slopes overlying Nahal Samakh and its tributaries. The main tell sites include et-Tell in the Bethsaida valley; Mas-harfawi in Nahal Kanaf (surrounded by a cyclopean wall); Fakhuri, el-Mudowarah, and Hutiyye in the Samakh basin; Tell ed-Dahab (wall remains), and others. Only 14 of these sites continued to be occupied in the LB period. In addition to the tell sites, there are small forts, such as site No. 151 in Nahal Samakh, which measures 20 m × 24 m and includes a fortification wall, in which there are small rooms, and two square towers. Other sites are burial caves with many funerary goods. Most of the information on the sites is based on survey work rather than on excavations; thus, not many details on the nature of the settlements are available.

The ceramic repertoire is varied, typical of other sites from this period in Palestine. Noteworthy are the large storage jars of coarse clay, decorated with bands of zig-zags—short combed or incised lines—similar to those found at Hazor and other sites in the N of the country.

In the LB, the number of sites in the Golan decreased by half. Most of the sites overlie MB sites and continued into the Israelite period, particularly in the S Golan, where half the sites are located. At Tel Madawwar, no LB settlement was found between the MB and Israelite levels, but a grave complex with complete LB vessels was found at the foot of the site. An additional burial complex was found in a cave at the foot of Tel Soreg, identified with Aphek of the Golan, but it has not yet been excavated (Kochavi 1989: 7). The ruins of Tel Soreg indicate continuity of settlement from the MB II and the LB II into the Israelite period.

Characteristic of the LB pottery in the Golan, particularly in the S, are storage jars of light coarse clay, decorated with a red-painted geometric pattern. Noteworthy of the finds is a bichrome fragment decorated with a bird ravaging a fish. In some assemblages, including a late dolmen burial site in the central Golan, imported Cypriot ware was found; and in another dolmen a typical figurine of a woman with a Hathor wig was found. To the end of the LB should be attributed finds from a late dolmen burial, including a pilgrim flask sherd and some bronze arrowheads.

The historical evidence for the MB and LB must rely on Egyptian records. There are no references from the first half of the 2d millennium that can be shown to relate directly to the Golan. From the 14th century are extant letters from El-Amarna (Amenhotep IV) that throw some light on the region. In EA 364, the ruler of Ashtartu complains to Pharaoh that the ruler of Hazor took three cities from him. It is clear that the kingdom of Ashtartu bordered on the kingdom of Hazor. The area of controversy was probably in the central Golan, or perhaps the NW Bashan (Ma'oz 1986: 145–46), and was probably related to a struggle for control over the trade routes. Another letter, EA 256, sent by the prince of Pihilu (Pella) to the Egyptian governor, describes a conflict between the prince of Pihilu and his ally, the prince of Ashtartu, on the one hand and the land of *Ga-ri* on the other (ANET, 486). It appears that the two cities of *URU Ha-iu-ni* and *URU Ia-bi-li-ma* were captured from the prince of Pihilu by the cities of the land of *Ga-ri*. Albright (1943) identified the former city with Kh. el-<sup>ʿ</sup>Ayun, in S Golan, and the latter with Tel Abil, in the Yarmuk river bed. Other cities in the letter were also identified by Albright and later scholars in the S Golan. Mazar subsequently proposed that the land of *Ga-ri*, *KUR Ga-ri* should be restored as *Ga-(su)-ri*, that is the biblical Geshur (Mazar 1986a). Apparently the land of Geshur existed as a political unit in the S Golan from at least the 14th century B.C.E.

Maacah, the entity bordering Geshur (Josh 12:5; 13:11), is alluded to even earlier in the Egyptian Execration Texts as a tribal name (E 62) and a place name (E 37; Ahituv *CTAED*, 132). It is presumed to lie N of Geshur, in N Golan, extending to the Huleh valley and S Beq'a valley. Its location is based on the identification of Abel-beth-maacah (2 Sam 20:15; 2 Kgs 15:29) with Tell Abil, S of

Metul. Maacah may have been the southernmost of the Amorite tribes of the Lebanon Beq'a.

**6. Iron Age (the Israelite Period).** Following the decline in population in the LB, there was a renewed spread of population in the Iron Age. Many MB sites were reoccupied in the Iron Age. Most of our information is from surveys (Epstein and Gutman 1972; Hartal 1989), which have revealed more than 52 sites (22 in the N, 10 in the center, and 20 in the S). They include small settlements, forts, and dolmens reused for burials. Among the sites established for the first time in this period are fortresses and fortified settlements, erected at strategic locations, such as Tel Dover at the entrance to the Yarmuk, Kh. Dajajiyye at the W entrance to Nahal Samakh, <sup>ʿ</sup>En Gev and Tel Hadar, both on the E bank of the Sea of Galilee, and Tell Abu Zeitun and "Mezad Yehonatan" (Tannuriyye) on the Golan plateau. Excavations yielding Iron Age strata have been carried out at <sup>ʿ</sup>En-GeV, Tel Soreg, Tel Hadar, Kh. Kanaf, Qasrin, "Mezad Yehonatan," Tell Abu Zeitun, and Bab el-Hawa.

At <sup>ʿ</sup>En-GeV, five Iron Age strata were exposed (Mazar et al. 1964). Limited probes, at the S and N edges, revealed a sequence of fortifications. The earliest (stratum V) was a solid wall 1.85 m wide, followed by a fortification system which consisted of a casemate wall (stratum IV), similar to those unearthed at Hazor and Megiddo, and the erection of a citadel (ca. 60 m × 60 m) at the N end of the site. The construction of stratum IV is attributed to Solomon. In stratum III (9th century B.C.E.), an offsets/insets wall, 5 m thick, was built beyond which was an alley and a courtyard building. This stratum was destroyed by a conflagration. Stratum II (838–790 B.C.E. followed the same building layout, while in stratum I (790–732 B.C.E.), the site was unfortified and a public building (perhaps a fort) was built in the N. The ceramic repertoire included red-slipped burnished bowls similar to the "Samaria type," cooking-pots with triangular rims, jugs, a store-jar, hole-mouth jars, and lamps. The stone objects included basalt pestles, a tripod bowl, an "incense bowl," and a votive axe of nephrite. Especially important is an ostrakon inscribed in Aramaic: *lsqy* (ca. 850 B.C.E.), probably a dignitary title such as "cupbearer" of an official at the site.

At Tel Hadar (i.e., Sheikh Khadr; Kochavi 1989: 9–11), a substantial round fort (ca. 70 m in diameter) was exposed from the Iron Age I, surrounded by two fortification walls and a gate. The building served as a granary, as indicated by the plan, the pottery, and charred grain remains, and was destroyed in a fire at the end of the 11th century B.C.E. After a gap, the site was reoccupied in the 9th–8th centuries B.C.E., with the floors of the new houses overlying the old walls. It was eventually abandoned.

A similar round or ovoid fort, some 70 m across, was partially exposed at Tell Abu Zeitun, on the upper plateau of S Golan. The outer face of the wall was well preserved, and its pottery derives from the Iron Age I.

At Tel Soreg (Kochavi 1989: 6–9), a small tell in Nahal <sup>ʿ</sup>En GeV, a fortified settlement from the 9th–8th centuries B.C.E. was exposed, including a fortification wall, a large building, and a series of dwellings.

At "Mezad Yehonatan," C. Epstein (1984: 5–6) excavated another fort dating to the Iron Age I. The fort, located on the upper tributary of W. Tannuriyye in E-central Golan,

is square (26 m × 26 m). Its walls are preserved (ca. 3 m high in 3–7 courses) and were built of an inner vertical wall (1.7 m thick), abutted on the outside by a sloping stone glacis. The gate was on the E, and measured 2.45 m wide and 2.65 m deep; a pair of pilasters on the inside restricted its passage. The tomb of a Roman soldier, buried with his iron sword, was also found.

In NE Golan, M. Hartal excavated Bab el-Hawa, an Iron Age II structure reoccupied in the Byzantine period. The exposed section includes a rough semicircular wall, 0.8 m thick and ca. 8 m across, with beaten earth floors laid on bedrock. The nature of the structure is unclear.

Below a Hellenistic fort at Khirbet Kanaf, a small section of a stone floor was exposed on which rested pottery of the 10th century B.C.E. The exposure at Qasrin was very limited—the site produced no Iron Age architecture, only hearths near the spring, which may attest to the activity of nomads (Ma'oz and Killebrew 1985).

The historical evidence for the Israelite period is to be found in the Bible—the books of Joshua, Samuel, and Chronicles (Pitard 1987). During the 10th century B.C.E., the area came under the control of the United Monarchy, and later the N kingdom of Israel. Transjordan was occupied by the Israelite tribes of Reuben, Gad, and half-Manasseh, and in the N by the Aramean tribes of Geshur and Maacah. The major powers in Syria were the Aramean kingdoms of Zobah and Damascus. The first three centuries of the 1st millennium are characterized by the ongoing struggle for control between the Israelite and Aramean kingdoms.

The book of Joshua indicates that the regions of Geshur and Maacah were not conquered by the Israelites at the time of the Conquest (Josh 12:5). While the borders of these kingdoms are not defined specifically, Geshur was located in the S Golan and Maacah in the N. According to 2 Sam 8:3–6, David defeated Hadadezer, the king of Zobah, and his ally Aram-Damascus, and placed garrisons in Damascus. The area under the control of Solomon (1 Kgs 9:18) reached Tadmor and Hamath and would have included Geshur and Maacah in the Golan. Geshur became a political ally with David, as indicated by the marriage pact between David and the daughter of Talmai, the king of Geshur. Maacah, on the other hand, took part in a coalition led by Hadadezer of Damascus against David, together with the children of Ammon, Aram Zobah, Rehob, and Tob (2 Sam 10:6–19). The Aramean coalition was defeated in battle and became subservient to David (Pitard 1987: 93). Maacah seems to have disappeared shortly afterwards as an independent entity, but Geshur continued to exist and, together with Damascus, exploited Israel's weakness in being unable to wrest Bashan from their control.

During the reign of Solomon, Rezon established a new independent dynasty at Damascus (1 Kgs 11:23–25; Pitard 1987: 96–97). His grandson, Ben-hadad, campaigned against Baasha, the king of Israel around 886 B.C.E. (Mazar 1986b; Pitard 1987: 107–14). "And Ben-hadad . . . sent the commanders of his armies against the cities of Israel, and conquered Ijon, Dan, Abel-beth-maacah, and all Chinneroth, with all the land of Naphtali" (1 Kgs 15:20). This campaign led, according to Mazar, to the destruction of several cities, including the Israelite stratum IV site at 'En-Gev, and the establishment of an Aramean fort at the

site (Mazar et al. 1964: 44). On the basis of 1 Chr 2:23 ("But Geshur and Aram took from them Havvoth-jair, Kenath and its villages"), Mazar assumes that Geshur annexed the W part of the Argob region in Bashan.

Another series of clashes between Israel and Damascus, with a decisive battle at Aphek in S Golan, is recorded in 1 Kgs 20:1–43. The name of the "king of Israel" in this cycle of stories (1 Kings 20 and 22) is Ahab, but it has been suggested that the event took place later, in the days of Joash of the dynasty of Jehu (Pitard 1987: 114–25). Israel, seriously weakened by the bloody purge that followed Jehu's seizure of the throne (2 Kings 10), fell victim to the expansionist policy of Hazael, king of Damascus. In 2 Kgs 10:32–33, it is recorded: "In those days the Lord began to cut off parts of Israel. Hazael defeated them throughout the territory of Israel: from the Jordan eastward, all the land of Gilead, the Gadites, and the Reubenites, and the Manassites, from Aroer, which is by the valley of the Arnon, that is Gilead and Bashan." After the death of Jehu, ca. 814 B.C.E., in the reign of Jehoahaz, Hazael seems to have expanded even to the W of the Jordan (2 Kgs 13:22; 12:17–18) and subdued Israel. Revival seems to have come only in the reign of Joash, after the death of Hazael, at the beginning of the 9th century B.C.E. (Pitard 1987: 161–70). In a series of battles, lasting some five years, Hazael's son, Ben-hadad (Bir-Hadad III), was first repulsed in battle close to the Israelite capital at Samaria (2 Kgs 6:24–27), after which he reorganized his army and perhaps also his administration by reducing his vassal states, including Geshur, to provinces (1 Kgs 20:24). A second battle, in which Ben-hadad was defeated, was fought near Succoth in Transjordan (1 Kgs 20:1–21). The third and final battle occurred near Aphek (1 Kgs 20:24–43); this site has been identified recently with Tel Soreg in S Golan (1 km W of Fig; Ma'oz 1986: 139). In the ensuing period, the territory of the Golan probably remained in Israel's hands (2 Kgs 14:25) and was only finally annexed to the Assyrian empire, together with the rest of N Israel, by Tiglath-pileser III following his conquest of the area in 732 B.C.E. (2 Kgs 15:29; Pitard 1987: 186–89).

#### D. Golan in the Bashan

The OT town of Golan was the northernmost of the Cities of Refuge, assigned by Moses in Transjordan, allotted to Manasseh (Deut 4:43; Josh 20:8). It was situated in the territory of the half-tribe of Manasseh that settled in Bashan in the former kingdom of Og (Deut 3:13). It was also a Levitical city assigned to the Gershonites, one of the families of the Levites (Josh 21:27; 1 Chr 6:56). As a Levitical city, it presumably served as the cult and administrative center of the Israelite settlement in Transjordan N of the Yarmuk river during the United Kingdom period.

The identification of the site has been much contested from antiquity to modern times, for the name Golan was retained in two different areas: firstly, in the place name Gaulon in Batanea in the Roman province of Arabia E of Nahr er-Ruqqad (Eus. *Onomast.* 64.6), and secondly, in the name of the territory Gaulanitis, adjacent to Galilee on the E of the upper Jordan River. Thus, while Eusebius in the early 4th century C.E. equated biblical Golan with the village Gaulon in Batanea, rabbinic sources looked for Golan within Gaulanitis. The Jerusalem Targum to Deut

4:43 equates Golan with Dabra, probably Dabura in central W Golan Heights. A Geniza fragment of Midrash Tanhuma equates Golan with Sluqiyye (Ginsburg 1928: 112), a fortress mentioned by Josephus in Gaulanitis (*Ant* 13.393; *JW* 4.3), identified at "Tell Sluqiyye" (Schumacher 1888: 237; Epstein and Gutman 1972: 271). Both references in the rabbinic sources, however, clearly testify that the rabbis had no knowledge of a place by this name within Gaulanitis. In modern research, Schumacher (1886: 91–99) was first to identify Golan with Sahm el-Jolan (M.R. 238243). His identification was followed by that of many scholars (e.g., Abel, *GP* 2, 338–39). Helck (1962: 129) suggested that Sahm el-Jolan is the place of Alunnu of the Thutmose III city list at Karnak (I:27a; Ahituv *CTAED*, 58–59) and Hlunni of EA 197:14; this name survived at nearby Nahr el-ʿAllan.

Albright (1943: 9; 1946: 57) preferred to look for Golan within modern Jaulan, W of Nahal Raqad, but could not specify a location. Loewenstam (*EncBib*, 458) followed Albright and suggested that the site should be N of the territory of Geshur, i.e., in N Golan in the territory of Aram Maacah. Oded (1968: 45–46) suggested an identification with ʿEn-Gev, whose stratigraphy (Mazar et al. 1964) is similar to Ramoth-gilead (Tell Ramid), another city of refuge and Levitical center. According to Oded, Geshur extended in the N only to the ʿEn-Gev/Fiq line, the boundary of the Israelite settlement. Ilan (1971: 50–51) returned to the ancient rabbinic suggestions and combined both references mentioned above to identify Daburah with both Golan and Seleucia. This suggestion is untenable since it is based on two erroneous rabbinic ideas (Bar-Kochva 1976: 62). Furthermore, the latter site has produced no evidence of occupation prior to the Roman period. Urman (1985: 22) suggested an identification for Golan at Tell el-Jukhadar, an important MB II/Iron Age I site in the SE Golan (Epstein and Gutman 1972: 276). He has not, however, produced any evidence for this proposal, and the area in which the last-mentioned site is found seems to be included in the land of Geshur and, therefore, cannot be Golan. The original identification at Sahm el-Jolan is still to be preferred for the following reasons: (1) Golan must be within the Bashan, the area settled by the Israelites, a center probably replacing Ashtaroth, capital city of Og, only 6 km to the NE (the Israelite settlement area did not extend W of Nahal Raqad, beyond which lay Geshur and Maacah in the Golan Heights); (2) the place Gaulane captured by Jannaeus in 81 B.C.E. (*Ant* 13.393) was seemingly situated en route between Dion (Tell el-ʿAshari; Schurer, *HJP*<sup>2</sup> 2, 148–49), on the E Yarmuk, and Seleucia and Gamala in the central Golan Heights, a location that fits Sahm el-Jolan; (3) the name Gavlan is also alluded to in rabbinic sources as an estate of R. Judah Hanasi (*Šeb.* 6.1), elsewhere connected to Batanea (*Maʿas.* Š. 4.1); a place by the name Gavlan, with a synagogue is referred to in the early 4th century C.E. (*Meg.* 73d; Klein 1911: 12); (4) a large village by the name Gaulon, with a territory by the same name in Batanea is mentioned in the early 4th century C.E. by Eusebius (*Onomast.* 61.6); the NW border of the province of Arabia, that included Batanea, bordered on Nahal Raqad, beyond which lay Palaestina (Sartre 1982: 69; Maʿoz 1986: 57); (5) a similar name, perhaps somewhat corrupted, *Go(la)nia*, is listed in Arabia in the

6th century C.E. (Georgius 1890: 1079). It seems likely that all the above references point to one and the same place, Golan in the Bashan. The name thus survived from the biblical period throughout the Hellenistic, Roman, and Byzantine times to the Ottoman period and present-day Sahm el-Jolan.

The site was described by Schumacher (1886: 91–99) as a large basalt village. The only ancient remain he mentions is a Roman mausoleum. Subsequently, two Greek inscriptions from the late Roman period were found. The reckoning in these inscriptions is to the era of Bostra in 106 C.E. (Brunnow and Domazewski 1909: 270).

The village is ca. 700 m × 200 m, lying on flat ground (440 m above sea level) on the E bank of the shallow Wadi Shafil, a tributary of Nahal el-ʿAllan. The water of two springs, called ʿEin es-Safuqiya, is brought to the village by a channel. The site is situated in the middle of a very fertile plateau of deep soils developed on the "cover basalt," the product of a volcanic eruption 3.8 million years B.P. (Mor 1986: 2). Annual precipitation is ca. 300 mm, and the area is known for its rich grain crops. No pre-Roman remains have yet been reported for Sahm el-Jolan, but the site has not been properly surveyed, and early occupation levels may be still buried below the village or at an unknown nearby site. This area of S Bashan (en-Nugra), however, abounds in Bronze Age sites (Albright 1925; Braemer 1984: 221 for further references). See also GOLAN (PLACE).

### E. Gaulanitis/Gaulane

Gaulanitis was an administrative unit within the kingdom of Herod and his descendants Philip, Agrippa I, and Agrippa II. Josephus mentions Gaulanitis as distinct from the other units in the Golan Heights, such as Hippos and the estates of Lysanias and Zenodorus, and later from the territory of Paneas and Oulatha in the Province of Phoenicia (cf. *Ant* 16.215–17, 354; 17.189, 319; etc.). From *JW* 3.37, it is evident that Gaulanitis bordered Galilee on the E along with Hippos. The unit must, therefore, be located in the central Golan Heights within modern Jaulan. The four cities referred to by Josephus in this division—Gamala, Seleucia, Soganae, and Julius—are all identified within the central Golan (Maʿoz 1986). This administrative unit seems to have survived into early Ottoman times in the division called "Nahia Butayha" (Hutteroth and Abdulfatah 1977: 195–96). Its borders are Nahal Neshef in the N (beyond which lay Paneas), Nahal Raqad in the E (beyond which was Batanea in Arabia), Nahal Samakh in the S (beyond which lay Hippos), and the Jordan and the Sea of Galilee in the W. See also GAULANITIS (PLACE).

**GOLDEN CALF.** The Golden Calf (*ʿēgel zāhāb*, 1 Kgs 12:28) or molten calf (*ʿēgel massēkâ*, Exod 32:4) appears only a few times in the Hebrew Bible, but it has come to epitomize the vilest kind of apostasy committed by the ancient Israelites. The worship of this calf is seen as a clear, unequivocal rejection of the proper worship of Yahweh in favor of an image of either Yahweh or a foreign deity. Such worship practices are uniformly condemned by the ancient writers.

There is little confusion about the nature of a calf (*ʿēgel*). It is a young male bovine, the counterpart of a heifer (*ʿēglā*), a young female cow. The nature of a golden calf (*ʿēgel zāhāb*) is likewise fairly clear. It is an image of a young bull made from gold. The nature of that image and its construction is defined by the phrase often used interchangeably with the golden calf—the molten calf (*ʿēgel massēkâ*). The word “molten” in Hebrew (*massēkâ*) is from the root *nsk*, which means “to pour out.” From that verb is derived the nominal form of the word, which has two senses: (1) to pour out a libation or drink offering (Exod 30:9; 1 Chr 11:18; Joel 1:9) or (2) to pour out liquid metal to make a “molten image” (Num 35:52; 2 Chr 28:2; Isa 42:17). It is in this latter sense that the word is used in this study. It is also in this latter sense that the word carries a negative connotation and is usually the subject of condemnation (Deut 27:15; Isa 30:22).

  1. Construction of the Calf
  2. Destruction of the Calf
  3. Identity of the Calf

### A. Occurrences in Scripture

The idea of a molten calf or golden calf appears in the Hebrew Bible in four major and several minor places, a few times in the intertestamental literature, and in the NT in only one place.

**1. Hebrew Bible.** The most famous occurrence is in Exodus 32. In this account of the events at Mt. Sinai, the people, impatient for the return of Moses from up on the mountain, agitate for the construction of some gods they can worship. Aaron obliges their request by collecting gold from the people and "creating" (see discussion below) a molten calf, of which it is said, "These are your gods, O Israel, who brought you up out of the Land of Egypt" (Exod 32:4). As a result of this action and after an altar has been erected to this calf, the anger of Yahweh and Moses erupts, and Moses descends from the mountain to correct the situation. He "destroys" (see discussion below) the calf (v 20), accuses Aaron of complicity in the apostasy (vv 21, 25, 35), an accusation Aaron seeks to sidestep (vv 22-24), and asks the sons of Levi to kill those who participated in the apostasy (vv 26-28).

A second major reference to the golden calf is in Deut 9:13-21. In a passage which talks of the stubbornness and sinfulness of the people (v 13), Moses intercedes with Yahweh to save the people from Yahweh's wrath. It was the making of a molten calf (v 16) which provoked Yahweh's anger against the people in general and against Aaron in particular (v 20). It is Moses' forty days of prostration and fasting, his prayers, and his destruction of the calf which saved the people and Aaron (vv 18, 20, 21).

Another passage which includes the golden calf is 1 Kings 11-12. Following Solomon's sins (1 Kgs 11:1-8), Yahweh becomes angry at Solomon (vv 9-13), and through the prophet Ahijah, Yahweh splits the kingdom in two parts, the N (Israel) and the S (Judah). The ruler of the N kingdom is Jeroboam I (922-901 B.C.E.) who is given ten tribes by Yahweh (11:31). Jeroboam is then concerned about his people going to Jerusalem in Judah for worship and, as a consequence, being influenced by the southern perspective (12:26). Thus he builds two temple sites, at Dan and Bethel, and places a "golden calf" at each site (12:28-29). As in Exodus 32, these calves are said to be "your gods, O Israel, who brought you up out of the land of Egypt" (12:28). Furthermore, Jeroboam selects priests who are *not* Levites (12:31) to serve at these temples. All of these activities in the north are soundly condemned (12:30; 13:33-34; 14:7-11) by the Deuteronomistic Historian, the southern writer and redactor of this material.

The fourth major reference to the golden calf is in the book of Hosea. One of the many sins of the north which the prophet Hosea condemns is the apostasy of the people. Among the various apostasies he rails against is the worship of the calf (Hos 8:5; 10:5-6). This sin is compounded by the making of molten images and the practice of sacrificing to these images, which are apparently in the shape of calves (13:2) and made of gold and silver (8:4).

There are other minor references to the golden calf or molten calf. In 2 Kgs 10:31, Jehu, king of Israel (842-815 B.C.E.), is condemned because he did not turn away from the sins of Jeroboam, who made the golden calves at Dan and Bethel (2 Kgs 10:29). Later in 2 Kings, when the Deuteronomistic Historian is explaining the fall of the

north, he lists the many sins which led to that fall, one of which was making "molten images of two calves" (17:16).

A similar perspective is found in the postexilic material of Chronicles and Ezra-Nehemiah. In 2 Chronicles 11 and 13 the Chronicler discusses the division of the country immediately after the death of Solomon. He points out how Rehoboam, the king of Judah, opened his doors to the Levites (2 Chr 11:13), unlike Jeroboam, the king of Israel, who rejected the Levites as priests (v 14) and chose his own priests to worship the "calves" (v 15). These "calves" are clearly a reference to the detested golden calves. A comparable view is present in 2 Chronicles 13, where Abijah, king of Judah, is speaking against the Israelites who had followed Jeroboam in making the golden calves (13:8) and had driven out the "sons of Aaron and the Levites" who were priests (vv 9-10). In Nehemiah 9, Ezra utters a long confession which rehearses the history of the people and cites several of their sinful acts. Among the sins which are enumerated are the making of a "molten calf" and the proclaiming of it as "your God who brought you up out of Egypt" (9:18). Note that in this telling of the story, God is singular, not plural as in Exod 32:4 and 1 Kgs 12:28. Perhaps for the writer of Nehemiah, the sin of idolatry was bad enough without also the intimation of polytheism (see Isa 42:17).

The last minor reference to the calf is found in Psalm 106. The theme of this psalm is the constant mercy of God in spite of the sinfulness of the people. The apostasy reported in Exodus 32 is retold in v 19, using poetic parallelism that associates "calf" with "molten image":

They made a calf in Horeb  
and worshipped a molten image.

**2. Intertestamental Literature.** There is a brief reference to the golden calf in the apocryphal book of Tobit. In recounting his history of true faithfulness to Yahweh, Tobit mentions that the rest of his house of Naphtali did not worship in Jerusalem, but sacrificed "to the calf Baal" (Tob 1:5). In the *Lives of the Prophets* in the Pseudepigrapha, it is said that when Elisha was born in Gilgal, the golden calf, presumably at Bethel, bellowed so loudly that it could be heard in Jerusalem. A priest interpreted this bellowing as a sign that a prophet had been born who would destroy the "carved images and molten idols" (*Liv. Pro.* 22:1-2).

Finally, in the pseudepigraphical work *Pseudo-Philo*, there are two references to the golden calf. One is a brief allusion to the tribe of Caleb confessing their desire to "make the calf that they made in the wilderness" (*Ps-Philo* 25:9). The second reference is an entire chapter devoted to retelling the story of the golden calf (*Ps-Philo* 12). In this account Aaron pleads with the people to be patient while waiting for Moses' return (12:2), but because he fears the people, Aaron gives in and collects the gold for the calf. However, it is "they," the men, who cast the golden earrings into the fire where the earrings were fashioned into the molten calf. (v 3). There is no intimation at all that Aaron had a hand in creating the calf.

**3. New Testament.** In Acts 7, Stephen preaches about the past history of his Jewish community. When he focuses on the period of Moses, he mentions the people's refusal to obey God (v 39). This rejection of God is manifested in

the people's request to Aaron to "make for us gods to go before us" (v 40). Then they make a calf and offer sacrifice to it (v 41). As a consequence, God turns away from them (v 42).

## B. Issues Regarding the Calf

There are several issues associated with these "golden calf" references which need further consideration. One issue is the construction of the calf. Who made it and how was it made? Closely tied to the former question is the matter of Aaron's association with the calf. A second issue is the procedure for the destruction of the calf. Finally, there is the question of who or what the calf represents.

**1. Construction of the Calf.** The crux of the difficulty in understanding the construction of the golden calf is found in Exod 32:4, 24. Part of the problem is the conflict between Aaron as the creator of the calf (v 4) and the calf as self-created (v 24). The remainder of the problem is in trying to decipher the actual process by which the calf was constructed (vv 4, 8, 20, 24, 35). It is clear that v 4 indicated that Aaron brought the calf into existence. He both collected the gold (vv 2-3) and somehow created the molten calf (v 4). This seems to be confirmed by v 35, which speaks of the calf that Aaron made (*'āsāh*). When one turns to v 24, a different picture is painted. In his defense before Moses, Aaron suggests that the creation of the calf was not his doing. He only collected the gold and threw it into the fire. The calf somehow emerged from the fire on its own accord, self-created.

One solution to this confusion as to Aaron's role in the creation of the calf is to understand Exodus 32 as the product of several authors or sources (see Perdue 1972: 237-38; Lewy 1959). Thus v 4 and v 24 would be from different authors. Some suggest that the source of v 4 (and v 35) would be the earlier, anti-Aaron tradition of the Elohist, and v 24 would be from the later, pro-Aaron tradition, probably the Priestly writer. The secondary insertion of v 24 would then be trying to put the best face possible on a difficult situation for Aaron.

Another solution is to see vv 4 and 24 as coming from the same source (e.g., Loewenstamm 1967: 483; 1975: 330-36). With this kind of analysis, one is forced to explain the apparent contradiction in Aaron's action by appealing to the veracity of the story itself. While accepting Aaron's denial of his complicity, one could affirm that Aaron "made" the calf by casting the gold into the fire with the subsequent emergence of the calf by itself.

The too quick rejection of the results of literary analysis, which suggests that at least two authors were involved in the production of Exodus 32, and the contortions often necessary to preserve the story as unified, make the single-author approach hard to accept. Accepting a multiple authorship of the story fits with the general literary analysis of the Pentateuch and with other literary texts in which Aaron's role is at best ambivalent (see Numbers 12; Deuteronomy 9).

The discussion of who made the molten calf carries over into the issue of how it was made (see Perdue 1972). Here the focus is on Exod 32:4. In this verse, Aaron "takes" (*wayyiqqāh*), presumably, the gold which the people had brought to him. He then "fashions" (*wayyāṣar*) it with a "tool" (*baḥeret*) and makes it (*wayya'āsēhū*) a molten calf

(*'ēgel massēhā*). The difficulty arises when one seeks to understand how the calf can be both molten (i.e., a cast object) and fashioned with a tool (i.e., an engraved or carved object). The frequent assumption is that the calf cannot be subject to both seemingly incompatible processes of creation. That in turn raises questions about the appropriate understanding of the MT and has brought forth various suggestions, including some which would emend the MT. The pivotal point in the argument is the understanding of *wayyāṣar 'ōtō baḥeret*, often translated as "he shaped it with an engraving tool." For those who advocate the single authorship of Exodus 32, or who want to preserve an entirely positive and innocent image of Aaron, this translation is problematical since it implicates Aaron in the creation of the calf. The usual mechanism for avoiding this problem is a reinterpretation of *ḥeret*, "engraving tool," as *ḥārīt*, "bag" or "cloak" (Gevirtz 1984; Noth 1959). The next step is to see *wayyāṣar* as coming from the root *ṣrr*, meaning "to bind," rather than *ṣwr*, "to fashion." Thus, the passage would be translated as "he bound it (the gold) in a bag (or cloak)," which eases Aaron's complicity in the creation of the calf. Alternatively, it has been argued that ancient languages and translation traditions saw *ḥrt* as being a "casting mold" (Perdue 1972: 245). Thus, the understanding is that Aaron "fashioned it in a casting mold," which removes the engraving versus molding conflict.

Thus there are four possible interpretations of Exod 32:4: Aaron bound the gold in a bag; he bound it in a cloak; he fashioned it in a casting mold; and he fashioned it with a graving tool. The first two suggestions are normally accompanied by a required emendation of the text and often seem to be influenced in part by the desire to maintain the sanctity of Aaron. The third possibility requires no emendations, but the linguistic basis for the reading is not as evident as one would like. Finally, the fourth possibility leaves in place the conflict between engraving and molding. However, Isa 8:1 seems clearly to understand *ḥrt* as "engraving tool," and the possibility of a molded image being finished by engraving is not out of the question. The only complication would be the inverted sequence of finishing the calf before it is molded, but such reversals are not unknown in the Hebrew Bible (cf. Gen 49:27; Isa 14:17).

**2. Destruction of the Calf.** Reports of the destruction of the golden calf are found in Exod 32:20 and Deut 9:21. The concerns are how the calf, if it is made of gold, could be burned, crushed, ground, scattered, and drunk in water, and whether there are any liturgical or ritual connotations to this process of destruction (see discussions in Begg 1985; Fensham 1966; Loewenstamm 1962; 1967; 1975; Perdue 1972). The obvious problem in burning a golden object has often been noted, and there are two solutions which have tried to preserve the literalness of the text. One solution is to suggest that the calf sat on a wooden pedestal, and thus it was the pedestal which was burned. Another proposal is to understand the calf as being made of wood plated with gold. Neither of these possibilities is particularly attractive, for neither has any textual evidence to support it, and neither seems to account for the sense of outrage which precipitated the calf's destruction.

It seems much more likely that some kind of symbolic or ritual destruction was envisioned by the authors. One source that is examined for such symbolic action is the Ba'al-<sup>c</sup>Anat Cycle from Ugarit, which describes the destruction of Môt by <sup>c</sup>Anat (*KTU* 1.6:II:31–36). She burns, grinds, and scatters Môt, perhaps in the sea. This seems to be a good parallel to Exod 32:20 and Deut 9:21, and scholars have thus argued for a dependence of the Israelite tradition upon the earlier Ugaritic material. Such dependence would thus suggest that a literal understanding is not warranted. However, the parallel with the Ugaritic texts may not be as clear or strong as is often intimated. On the one hand, the Ugaritic story may have more to do with the treatment and processing of grain than the destruction of a god. On the other hand, the specific terminology used in the Ba'al-<sup>c</sup>Anat account is not as closely paralleled in Exod 32:20 and Deut 9:21 as one might expect or hope.

Nevertheless this idea of a ritual destruction of an enemy or a foreign deity is still quite plausible, since appropriate parallels can be found within the Hebrew text itself. One only has to look at the actions of Josiah in 2 Kgs 23:6 to find a striking parallel (see also Deut 7:5; 12:3; 2 Kgs 23:4, 15; 2 Chr 15:16). Thus a ritual annihilation of a non-Yahwistic god seems to be the implication of the passage in Exod 32:20.

**3. Identity of the Calf.** The identity of the golden calf is a most intriguing yet difficult issue. The suggestions for the identity of the calf have been far-ranging, but generally these suggestions cluster into two categories: the calf represents worship of a deity outside of the "normal" Israelite tradition; or the calf represents the worship of an idol from within the Israelite tradition. In either case, the tradents condemn the practice of worshipping this golden calf. In the first category, the condemnation is a consequence of the worship of a deity other than Yahweh, such as Sin or Ba'al. In the second category, the condemnation is for the construction and worship of an idol, even though that idol may have been intended to symbolize Yahweh or was somehow associated with Yahweh.

One suggestion which falls into the second category is the identification of Moses with the calf (Sasson 1968; see also Coats 1987). This argument relies upon three observations. The first concerns the reason for the construction of the calf. It is a result of Moses' extended absence, and in that absence a desire to replace him arises. Hence the calf is made. The second observation is the identification of Moses as "the man who brought us up out of the land of Egypt" (Exod 32:1) and the calf as "your gods, O Israel, who brought you up out of the land of Egypt" (v 4). Because of this parallel identification, the calf is seen as a substitution for Moses, who has disappeared. The third argument is that Moses develops horns and is thus again to be identified with the calf. Moses having horns is based on the contention that Exod 34:29, 30 should be translated as "the skin of his face became horned" (or developed horns), not as "his face shone." Thus, the worship of the golden calf is the worship *in absentia* by the waiting Israelites of their venerated leader—Moses.

Also in the second category is the argument that the calf represents Yahweh, or at least a place or stand for Yahweh (Coats 1987; Kapelrud *TDOT* 1:42–44). That it represents Yahweh is based, in part, on the iconography of the bull in

the ANE. The bull is often seen as a symbol of strength and virility, both of which were desired characteristics for the god Yahweh. In addition, there are several biblical references which could be used to identify Yahweh as a bull. In Gen 49:24; Ps 132:2, 5; and Isa 49:26; 60:16, "Yahweh" is in poetic parallelism with "the mighty one of Jacob." Similarly, "Yahweh" is parallel with "the mighty one of Israel" in Isa 1:24. The replacement of "mighty one" for "bull" depends on the fact that both understandings are legitimately derived from the same Hebrew root, <sup>br</sup>. Furthermore, it is usually thought that <sup>abîr</sup> ("bull") was changed to <sup>abbîr</sup> ("mighty one") by the Massoretes, by simply altering the pointing (adding a dagesh to the *bet*), in order to remove any undesired association of Yahweh with a bull. Nevertheless, it is quite clear that "bull" is a legitimate understanding of <sup>br</sup> in Hebrew (Isa 34:7; Ps 50:13) and that "bull" can be associated with a deity (Jer 46:15; Ps 22:13—Eng 22:12).

An alternate way to associate the calf with Yahweh is to argue that the calf is really a stand or pedestal for Yahweh (Eissfeldt 1940–41; for summary of arguments see Bailey 1971: 97–105). Again, ANE iconography is appealed to for this understanding, since gods are often displayed standing on the back of animals, including bulls (see *ANEP*, 170, 179–81; Negbi 1976: 21–23). These bulls were not the gods themselves, but symbols of the attributes of the gods. Hints of this idea of a god standing or sitting upon an animal are found in the Hebrew Bible. In 2 Sam 22:11, Yahweh is described as riding on a cherub, and some descriptions of the ark indicate that it has cherubim and is a seat for Yahweh (Exod 25:17–22; Lev 16:2).

Following this line of argument then provides an understanding of Jeroboam's action in 1 Kings 12. He was not starting the worship of another deity in the construction of the golden calves. Rather, he was setting up an alternative symbol to the ark, to represent the presence of Yahweh and to provide a place for Yahweh to sit upon the bull at Dan and Bethel as he would sit upon the ark in Jerusalem (see Aberbach and Smolar 1967: 134–35). The difficulty with this line of argument is that there is no indication in the Bible that the bull was seen as a pedestal for Yahweh.

The alternative to seeing the calf as something representing Yahweh is to see it as representing some other god. Two frequently suggested identifications are <sup>El</sup> and Ba'al. <sup>El</sup> is frequently labeled "the bull" in Ugaritic materials, signifying the strength and fertility of <sup>El</sup> (*KTU* 1.4 II:10; 1.3 III:29). In a similar way, Ba'al is thought to be represented by a bull (see Tob 1:5), in part because after intercourse with <sup>c</sup>Anat, a steer is born (*KTU* 1.10 II:26–III:4).

The argument for an association of the calf with some member of the Ugaritic pantheon is reinforced by the claim that Exod 32:18 should be read as "sound of <sup>c</sup>Anat" (*qôl 'anât*) rather than the "sound of singing (*qôl 'annôt*)." (See discussions in Edelman 1966; Sasson 1973: 157; Whybray 1967.) This would introduce another Ugaritic deity to the account. However, this alteration of the MT has no textual support and is thus not widely accepted.

Another suggestion is that the calf represents the moon god Sin (see discussions in Bailey 1971; Key 1965; see also Lewy 1945–46). This argument is buttressed by many pieces of evidence. One is that in general the bull in the

ANE, particularly in Sumerian and Akkadian traditions, represents the moon god, and this is also true for the god Sin. This probably reflects the association of the crescent moon with the horns of the bull. The existence of the moon cult of Sin is widespread and manifests itself in such names as Naram-sin and Rim-sin. Within the biblical material, it is argued that the name of Abraham's father, Terah, is derived from a term referring to the moon, that Laban, derived from a word meaning "white," is also associated with the moon, and that the name Sinai may be associated with the god Sin. A second element of the argument concerns the fact that the Patriarchs come from and through territories associated with the worship of Sin. Sin is present at Ur, the city of origin of Abraham. In addition, Haran, a stop on the patriarchal journey, was a prominent cultic center for the worship of the moon god. Thus, the Patriarchs could not have avoided contact with the worship of Sin. Finally, there is the archaeological evidence from the city of Hazor in N Israel. In a Late Bronze (LB) Age temple at the site, there were found a seated figurine with a crescent moon on his chest and a stele which had a crescent symbol above two up-reaching hands (see Yadin 1970: 216-17, 223). It appears that worship of the moon god was present in Palestine at this time.

The reference to the stele and figurine at Hazor brings to the fore a final consideration in regard to the identification of the calf—the archaeological evidence. As indicated earlier, there are many examples of the calf or bull in ANE iconography. Sometimes the bulls have gods standing on their backs (see *ANEP*, 170, 179-81; Negbi 1976: 21-23). However, there is also evidence that the bulls themselves were understood to be gods or symbols of gods which were to be worshipped. This was seen in the literary evidence from Ugarit (see above), where Ba'al, 'El, and 'Anat are represented as bulls, and from Sumerian and Akkadian texts (see above), where Sin appears as a calf. Beyond the literary evidence is the discovery of bulls at such sites as Byblos, Ugarit, Hazor, Tell Halaf, and Carchemish (see Mazar 1982; Moorey 1971). Some of these finds are from the early 2d millennium; however many are from LB or Iron Age contexts. In addition, there is the discovery of a bull at an unnamed cultic site near Shiloh in Palestine which is clearly from the Iron Age (Mazar 1982). Hence the association of the bull or calf with a deity is found in the same time frame as that of the ancient Israelites and within the geographical limits of Palestine. One must therefore conclude that the writers of the Hebrew Bible knew of the traditions of calf worship, which explains not only the references to such worship in the Hebrew Bible but perhaps also the antipathy toward the practice by the tradents of the Hebrew Bible.

None of these suggestions for the identity of the calf can be held with absolute certainty. Rather, the discussion must be in the realm of probabilities. The argument for the calf being Moses is intriguing but unlikely, since the worship of a statue representing a human seems out of character with the ancient traditions, and the argument that Moses grew horns is based on one of several possible renderings of the text. The argument that the calf was a stand lacks any textual support and depends on the possible parallel with the ark. The association with Ba'al or 'El

is certainly possible if for no other reasons than the close geographical association of Ugarit and ancient Israel and the many examples of syncretism between their religion and culture. Furthermore, the animosity toward Ba'al in the Hebrew Bible may be reflected in the strong reaction against the construction of the calf. Finally, the association with Sin has the widest collection of evidence, from names, iconography, proximity to the cult, and archaeological evidence of the presence of the moon cult in Israel. Indeed the reference in Josh 24:14 to "gods beyond the river" may reflect a call for the rejection of a god such as Sin.

Regardless of the identity of the calf, it is clear that its presence struck a discordant note to the biblical tradents. Nothing good could be said about the calf or its worshippers, and it represented something seen as quite contrary to the appropriate worship of Yahweh.

**GOLDEN GATE.** See BEAUTIFUL GATE (PLACE).

**GOLDEN RULE.** Since the 18th century the "Golden Rule" has commonly designated the ethical maxim, "Do unto others as you would have others do unto you," attributed to Jesus by Matthew (7:12) and Luke (6:31). The descriptive terminology is thus quite modern, but it had an antecedent in the expression, "Golden Law," used of the maxim as early as 1674.

### A. Reciprocal Morality

Similar kinds of statements, focusing on a morality of reciprocity, are to be found in various cultures. One of the oldest such sayings is attributed to Maeandrus by Herodotus: "I will not myself do that which I account blameworthy in my neighbor" (Hdt.3.142; cf. 7.136: "I will not do that which I blame in you"). Similarly, Thales, when asked how men might live most virtuously and most justly, is reported to have replied: "If we never do ourselves what we blame in others" (Diog. Laert. 1 [Thales].9). An early positive formulation of the principle is found in Isocrates: "You should be such in your dealings with others as you expect me to be in my dealings with you" (Nicoles 61).

A negative formulation tends to predominate, particularly in Eastern cultures, where it is variously found among the Confucians, Buddhists, and Zoroastrians. For example, to Tzu Kung's question—"Is there any one word that can serve as a principle for the conduct of life?"—Confucius is reputed to have answered: "Perhaps the word 'reciprocity'; do not do to others what you would not want others to do to you" (*Analects* 15.23). On the other hand, a later source (16th century) identifies "Treat others as thou wouldst be treated thyself" as a traditional saying.

### B. Jewish Sayings

Within the Jewish tradition, various formulations of the Golden Rule are found from about 200 B.C. Bartsch (1984) suggests that the oldest Jewish reference to the Golden Rule is in the *Letter of Aristeas* (of uncertain date somewhere between 200 B.C. and A.D. 33). There, the king's question—"What is the teaching of wisdom?"—received the response, "As you wish that no evil should befall you, but to be a partaker of all good things, so you should act on the same principle towards your subjects and offenders" (*Let. Aris.* 207). Other commentators, however, compare the Golden Rule to Lev 19:18 and Deut 15:13, and find early Jewish formulations in Tob 4:15, "And what you hate, do not do to anyone," and Sir 31:15, "Judge your neighbor's feelings by your own."

A positive version of the principle is found in 2 *Enoch* 61:1, "Just as a man asks (something) for his own soul from God, so let him do to every living soul" (cf. *T. Naph.* 8:4, 6). In the Mishnah, "Let the honor of thy fellow be dear to thee as thine own" is attributed to R. Eliezer (*m. Abot* 2: 10). The Palestinian targum on Lev 19:18 reads, "so that you don't do to him (your neighbor) what you yourself hate." According to a frequently cited rabbinic tradition, Hillel was once asked to recite the entire Torah by a heathen, who offered to become a proselyte if Hillel could make the recitation while the prospective convert stood on one foot. The wise Hillel simply responded:

"What is hateful to you, do not to your neighbor: that is the whole Torah, while the rest is commentary thereof; go and learn it" (*b. Šabb.* 31a).

The wide diffusion of sayings such as these makes it difficult to accept as demonstrated R. G. Hammerton-Kelly's claim (*IDBSup*, 369–70) that the Golden Rule is the product of Greek popular morality, formulated by the sophists (5th century) and taken over by Jewish thought in the Hellenistic period. The Golden Rule is a typical and traditional epitome of popular wisdom.

### C. Jesus' Saying

Some authors contrast Matthew and Luke's positive formulation of Jesus' saying with the negative formulation in much Jewish literature. Hence, they conclude that the Golden Rule, as expressed in the gospels, represents an authentic utterance of the historical Jesus. However, there seems to be no compelling reason to ascribe the gospel logion to the historical Jesus, even if it be likely that Jesus did summarize the Jewish law in some manner.

Because of the use of the imperative in the gospel saying, Bultmann (1963) and Dibelius (1971) have specifically identified its genre as an exhortation. The positive formulation of the Jesuanic logion was echoed, in early Christianity, by 1 *Clem.* 13:2, which cites it as part of a catena of citations, and by Tertullian (*Adv. Marc.* 4.17), who argued that Jesus' positively formulated utterance (= Luke 6:31) implied its negatively formulated counterpart. In contrast, the *Didache*, however, offered a negative formulation, without specifically ascribing it to Jesus, i.e., "Whatever you [in the singular] wish not be done to you, do not do to another" (*Did.* 1:7–9). A negative version of the Rule, "Whatever you would not have done to you, do not do to another," is also found in the Western text of the Apostolic decree and its accompanying letter (Acts 15:20; 29 in D, 323, 945, 1739, 1891, and a few other ancient mss). Finally, a negative version of the logion, hardly different from the common Jewish formulation, is ascribed to Jesus by the Coptic *Gospel of Thomas*: "Do not do what you hate" (*Gos. Thom.* 6).

The Golden Rule found in Matthew and Luke has been taken over from the Q source, whose version of the logion was most likely "So what you wish that others would do to you, do so to them as well." Both Matthew and Luke incorporate the saying in a programmatic sermon attributed to Jesus (Matthew's Sermon on the Mount; Luke's Sermon on the Plain). That is also its most likely context in the Q source, where it likely came before an exhortation on neighborly love (Matt 5:44; Luke 6:27).

### D. Matthew

Each of the evangelists has edited the traditional logion and placed it in a different location within the sermon. Matthew is fond of summaries, and his version of the Golden Rule clearly functions as a summary within the Sermon on the Mount. "So" (*oun*, therefore), "whatever" (*panta*, literally "all"), and "for this is the law and the prophets" (*houtos gar estin ho nomos kai hoi prophetai*), Matthew's three editorial additions to the Q material, clearly indicate his summarizing use of the utterance.

On the literary level, while recognizing that *oun* clearly links the logion to what precedes it, exegetes are divided

among themselves as to the unit of the Sermon which Matthew intends to summarize and conclude at Matt 7:12. While there are some who identify a unit beginning at 7:1 or 6:19, the better opinion seems to be that the unit begins at 5:17. The "law and the prophets," a Matthean refrain (5:17; 7:12c; 22:40), brackets and unifies the disparate material gathered together in 5:17-7:12.

On the level of the evangelist's thought, the Golden Rule epitomizes the righteousness of those who are to enter the Kingdom of Heaven (Matt 5:20) and sets the stage for the warnings which follow (7:13-27). The recurrence of the law and prophets motif, Matthew's interpretive addition to the Golden Rule (7:12c), in 22:40, confirms Matthew's use of the Golden Rule as a summary norm for the Christian way of life. In Matt 22:40 the evangelist also summarizes the ethical demands addressed to the disciples of Jesus. For Matthew, the Golden Rule is not simply one ethical norm among others; it is a succinct expression of the life to be lived by those who follow Jesus' teachings.

Bultmann (1963) noted that the isolated logion has the form of a profane *mašal* (metaphorical speech) which gives moral expression to a "naive egoism." Matthew's use and interpretation of the utterance are, however, to be otherwise understood. The use of "whatever" (*panta*, "all"), a Matthean expression (6:33; cf. 13:46; 18:25), provides the Golden Rule with a quantitative and comprehensive dimension. The positive formulation and the appearance of "do" in the active voice (*poieō*) in both the protasis and the apodosis (12a, 12b; cf. *Did.* 1:2 and the Western tradition's version of Acts 15:20, 29, where the more passive *ginomai* appears in the apodosis) impart an active nuance to Matthew's use of the Golden Rule. This active dimension corresponds to Matthew's understanding of the Christian life expressed elsewhere in his work (e.g. his more active version of the Beatitudes (Matt 5:3-10; cf. 21:35-46).

Although it sets standards of conduct in terms of one's desire for oneself, Matthew's version of the Golden Rule—located as it is within his Sermon and summarizing the Christian life as it does—in no wise proposes a self-centered motivation for behavior. After the Matthean exposition on the Law, Christian living, and prayer and worship, key features of the new righteousness, the Golden Rule functions as an exhortation to an active way of life.

### E. Luke

In Luke's Sermon on the Plain, the Golden Rule (Luke 6:31) is directed to the people of God, prefigured by the circle of Jesus' disciples. The setting in Luke, where it appears in the midst of a series of exhortations on love, is apparently more natural than the setting in Matthew, but many authors ascribe this more natural setting to Luke's editorial work. As an isolated logion assumed into a collection of sayings, Luke's Golden Rule does not so much function as an epitome as it does as a specific moral exhortation: "Also, treat others as you want them to treat you". This is in contrast not only with Matthew (cf. Luke's "and as," *kai kathōs*; Matthew's "so whatever," *panta oun hosa*), but also with extrabiblical usage (cf. the responses of Confucius, Thales, and Hillel).

Luke has directed particular attention to the idea of reciprocity implied by the adage. He has accentuated the notion of reciprocity by an editorial addition to the Q

logion. "So" (*homoios*) is a Lukan term (Luke 3:11; 5:10, 33; 6:31; 10:32, 37; 13:3; 16:25; 17:28, 31; 22:36; but only three times in Matthew and twice in Mark) that provides a qualitative dimension to the Lukan Golden Rule (cf. Matthew's quantitative *panta*, "all"). With the addition of vv 32-34, Luke immediately modifies the Golden Rule's inherent notion of reciprocity. The Lukan Jesus can endorse traditional wisdom, but he exhorts his disciples to a way of life that transcends mere reciprocity. Love of self is neither the norm nor the final word.

RAYMOND F. COLLINS

**GOLGOTHA** (PLACE) [Gk *Golgotha*]. The place in Jerusalem where, according to the Gospels, the Passion of Jesus ended with his burial in a new tomb which lay in a nearby garden (John 19:17-42).

### A. Biblical Information

From the gospels, the location is clearly defined with reference to the city of Jerusalem: (1) the site was known by its Hebrew name, *gulgulṭ*<sup>2</sup>, transliterated into Greek as *golgotha*, which was translated *Kraniou Topon* ("Place of the Skull") and *Calvariae locum* in the Vulgate (John 19:17-18; Luke 23:33; Mark 15:22; Matt 27:33); (2) the site was outside one of the city gates, but not far from it (Heb 12:12); the Fourth Gospel stresses that many Jews read the inscription on the cross "because the place was near the city" (John 19:20); (3) at the site of Golgotha there was a garden containing a new tomb (cf. John 19:41; 20:15, which implies the existence of a garden with the mention of a gardener); (4) the owner of the new tomb was Joseph of Arimathea (Matt 27:59-60); (5) the tomb was cut into the rock and the entrance closed with a large stone in the shape of a millstone (Matt 27:59-60; Mark 16:3-5; Luke 23:53; 24:2). The tomb appears to have been of the arcosolium type rather than *kōkīm*. See BURIALS (ANCIENT JEWISH). In John 20:12, the angels were seated at Jesus' head and feet when he lay on the burial platform. The evangelist's description of the angels would be impossible in a tomb of the *kōkīm* (or oblong oven) type, while it would be quite natural in an arcosolium tomb.

### B. Location

The Christian tradition since the early days of the Church has always recognized Golgotha in that place now located within the confines of the Anastasis Church. Beginning in 1961, archaeological excavations and underground explorations have been conducted in the area of the Anastasis, commonly known today as the Basilica of the Holy Sepulchre. At the same time, the adjoining area of Muristan has also been investigated (e.g., Kenyon 1974; Lux 1972).

The ancient tradition and the recent archaeological discoveries must be compared with the biblical data to establish whether the oldest tradition is valid and the Basilica of the Holy Sepulchre is indeed the authentic site of Golgotha. It must be noted that after the death of Jesus, the area of Golgotha was included within the Jerusalem city walls by Herod Agrippa I (A.D. 40–44.) After Jerusalem had been destroyed in A.D. 135, the new city, "Colonia Aelia Capitolina," was rebuilt further to the north, so that the site of Golgotha ended up in the center of the city. According to the historical sources (Eusebius *Vita C.*; Jerome *Ep. Paul.*), the site of Golgotha was buried under the vast landfill of the Capitolium (pagan temple) of Aelia. The new Roman city is clearly outlined in the famous Madaba Map of the 6th century A.D.; however, in place of the Capitolium stands the Constantinian Anastasis. The changes effected as a result of the establishment of the Roman city can still be seen today in the Old City, explaining how the site of Golgotha came to be in the center of the city.

### C. Results of Archaeology

What was the site of Golgotha like at the time of the Passion of Christ? The information provided by the gospels finds good support in the results of recent archaeological research (e.g., Corbo 1981–82: Vol. 1) The excavations undertaken from 1961 to 1980 at the site of Golgotha yield the following data:

(1) No dwellings of any kind belonging to a time prior to the end of the 1st century A.D. were found at the site.

(2) From the 7th century B.C. onwards, the saddle of Mt. Gareb, where Golgotha was later situated, contained a great quarry of malaky (royal) stone. Obvious and sure indications of this quarry were found throughout the area which underlies the Basilica of the Holy Sepulchre and in the adjacent Muristan area.

(3) When the quarrying was discontinued in the 1st century B.C., the pit was reclaimed for cultivation. Topsoil and scattered stone chips were thrown back into the pit. The result was a garden with levels corresponding roughly to the floor of the present basilica, ca. 10 m below the contour line (760 m above sea level) of the original saddle of the slope of the hill.

(4) Since the pit was turned into a garden, it had vertical walls of stone at its outer edges, especially its W and S sides. At least two tombs were cut into the W walls of the rock: that of the arcosolium type (the tomb of Jesus) and the one commonly known as the tomb of Joseph, with burial sites of the *kôkîm* (or oven) type. The vertical wall on the S flank rose above the garden like a kind of spur, so that its E and S flanks remained connected to the original

saddle of the hill. This rocky spur, including the garden below, was called Golgotha.

(5) The garden, along with the rock escarpments of Golgotha and the tombs, underwent two great alterations after the resurrection of Jesus. First, with the construction of Aelia Capitolina, the garden and the rocky escarpments were buried beneath a vast landfill that raised the levels of the garden to the level of the remaining saddle of the mountain, thus creating a large platform. The Capitolium was then constructed on this platform, above the tomb of Jesus. The structure had three chambers with a statue of Jupiter in the central one. The rocky spur of Golgotha, now buried in the landfill, then became the foundation for a marble statue of Venus. Our source for this information is Jerome in his letter to Paulinus. The testimony of Eusebius (*Vita C.* 26) concerning the Hadrianic temple above the garden of Golgotha is more vague, because it speaks in general terms of a cult of Venus ("... building a dark recess for an unchaste deity, Aphrodite..."). Recent excavations have yielded many Hadrianic remains of the *temenos* of the Capitolium's foundations (Corbo 1981–82: 1.33–37; 2. Table 28; 3. Photos 1–3, 5, 14, 15, 17, 30, 31, 34, 44, 45, 50, 51, 53, 88–90, 118–20). The rediscovery of remains of Hadrianic construction on the site of the garden of Golgotha is a most certain criterion for the authenticity of this site.

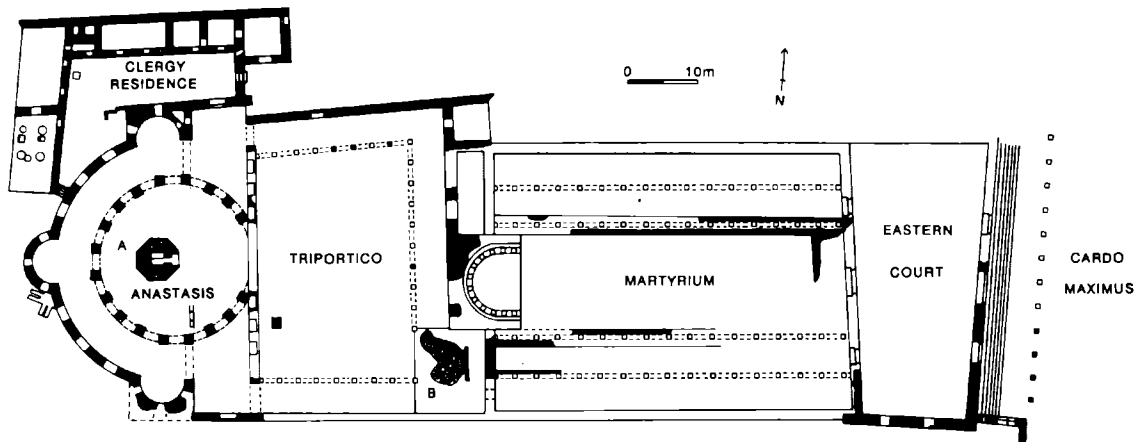

The second alteration, according to information provided by Macarios, bishop of the mother church in Jerusalem, was the work of Constantine the Great, who, in A.D. 325, had the Capitolium and the *temenos* torn down and the landfill removed. In this process, the garden of Golgotha, with its two monuments of the Passion (the tomb of Jesus and the hill of Golgotha) was discovered: on the S side, the rocky spur of Golgotha itself reemerged, while in the W, the rocky escarpments of the saddle containing the two tombs were rediscovered.

In order to isolate the arcosolium-type tomb of Jesus, the rocky flanks to the W and N were subsequently cut away. This re-landscaping was undertaken to make way for the construction of both the Anastasis around the tomb of Jesus and the patriarch's house for the bishop of Jerusalem. In addition, the two remaining sides (E and S) were now also trimmed down and squared off, resulting in a type of four-sided pillar open to the sky (see Corbo 1981–82, 2: fig. 41). Thus, with the renovations of Constantine, the geography of the hill of Golgotha and of the garden was radically altered, differing appreciably from its appearance at the time of the Passion.

When thus isolated, the rock of Golgotha now faced the S and E wings of the Constantinian triportico and stood across from the walls of the grandiose basilica of the Martyrium. This basilica, according to the later account of the 4th-century pilgrimage of Egeria, was given Golgotha's proper name, Martyrium, or "place of witness": "... therefore it is called Martyrium because it is in Golgotha" (Maraval 1982: 272). See Fig. GOL.01.

The building complex which Constantine then erected to honor the memory of the Passion has now been excavated and can be reconstructed (Corbo 1981–82. 1:39–137; 2: tables 10, 11, 14, 16–19, 21, 23, 24, etc.; 3). This complex includes (from the W) the Anastasis (with the clergy residence to its N), the Triportico, the basilica (Mar-

**GOL.01.** Basilica of the Holy Sepulchre, incorporating A, the tomb of Jesus, and B, the rocky spur of Golgotha. Solid black indicates Constantinian remains.

tyrium), and the E court with its main entrance facing the *Cardo Maximus* (the city's principle N-S artery).

VIRGILIO C. CORBO  
Trans. Dietlinde M. Elliott

**GOLIATH** (PERSON) [Heb *golyat*]. The Philistine champion slain in single combat with David (1 Samuel 17). In one of the most familiar passages from the Hebrew Bible, the Philistines and the Israelites were encamped facing each other across the Elah valley during Saul's reign (vv 1-3). Each day for forty days Goliath of Gath, a Philistine warrior of great stature, went forth and challenged the Israelite host (vv 4-11, 16). Finally, the inexperienced youth David, armed only with his shepherd's staff and a slingshot, met Goliath's challenge (vv 24-40). After hurling invectives at each other, the unmatched foes approached each other to do battle (vv 41-48). A well-slung stone by David felled the Philistine, after which David cut off his head and (in an apparent anachronism) brought it to Jerusalem (vv 49-51a, 54). At the death of their champion (Heb *ʾis habbēnayim* [vv 4, 23] or *gibbōr* [v 51]; about the former term, see de Vaux [1971: 124-25] and McCarter [*1 Samuel* AB, 290-91]), the Philistines fled; the day belonged to Israel (vv 51b-53). From later passages, it can be inferred that David subsequently devoted

Goliath's sword to the sanctuary at Nob (1 Sam 21:10-Eng 21:9; 22:10; see also Josephus, *Ant* 6.192, 244).

In the MT, Goliath's height is given as "six cubits and a span" (1 Sam 17:4), which would be about nine feet and nine inches, a true giant. However, LXX Codex Vaticanus and the Lucianic recension, as well as 4QSam<sup>a</sup> and Josephus (*Ant* 6.171) all give Goliath's height as "four cubits and a span," about six feet and nine inches. Since the expected tendency would be to exaggerate the height of David's opponent, the latter reading, according to which Goliath would still be a giant (albeit among men), is to be preferred (see McCarter *1 Samuel* AB, 286). Parallels to the single combat between two parties to determine the outcome of a larger conflict have been identified in the *Iliad* (Paris and Menelaus in Book 3, Hector and Ajax in Book 7), in the Egyptian Story of Sinuhe (de Vaux 1971: 129; but see Hoffner 1968: 220-21), in the Hittite Apology of Hattushilish III (Hoffner 1968: 221-25), and in the Hebrew Bible (2 Sam 2:12-17, in which the battle is between two groups of soldiers equal in number). According to Galling (1966: 153-67), Goliath's armor and armaments, including a helmet, a breastplate of scales, a shield, a scimitar, a javelin, and greaves, cannot be viewed as evidence of his Aegean origin. His arms were an eclectic lot, listed in detail as a literary device to emphasize his stature as a warrior. The name "Goliath" is most frequently derived from the Lydian/Luwian *Ahyattes* (Albright 1975: 513). Although the Philistine warrior in 1 Samuel 17 is named Goliath, that name only appears twice in the chapter (vv 4 and 23), both times in contexts which would suggest that the name is a later addition to the story. In the rest of 1 Samuel 17, David's opponent is simply referred to anonymously as "the/that Philistine" (cf. 1 Sam 19:5). In addition, 2 Sam 21:19 attributes the killing of Goliath to a certain ELHANAN (see 1 Chr 20:5). Although attempts have been made to equate Elhanan and David, either as personal name and title (von Pákozdy 1956: 257-59) or as given name and throne name (Honeyman 1948:

23–24), it seems most likely that details of Elhanan's battle with Goliath, including the name Goliath and the comparison of the shaft of his spear to a weaver's heddle-rod (about which see Yadin 1955: 58–69), were transferred to David and became part of the legend of his battle with a Philistine champion at a very early stage. See also DAVID (PERSON).

CARL S. EHRLICH

**GOMER** (PERSON) [Heb *gōmer*]. The name of two people in the OT.

1. Oldest son of Japheth and grandson of Noah who was the father of Ashkenaz, Riphath, and Togarmah (Gen 10:2; 1 Chr 1:6). In the 6th century B.C., the Bible pictures Gomer's descendants as being allied with those of Togarmah in support of Magog, Meshech, and Tubal, brothers of Gomer in the early genealogies. They are to be defeated as part of God's judgment on Gog, king of Magog (Ezek 38:2–6). These peoples are probably to be identified with the CIMMERIANS (Akk *qimmiraia*; Gk *kimmerioi*). These were Indo-Europeans from the Ukraine in south Russia, forced out of their homeland by the descending Scythians. They, themselves, advanced upon the Uartians in the region of Lake Van in the 8th century B.C., and also threatened the Assyrians. Pushing W into Asia Minor, the Cimmerians conquered Gordion and its Phrygian king Midas (676 B.C.). They then defeated Gyges of Lydia at his capital, Sardis (644 B.C.). Some of the Cimmerians apparently settled in Cappadocia, which was called Gomir by the later Arameans. Defeated by the Assyrians in the mid-7th century B.C., the Cimmerians intermarried with their neighbors and disappeared from history in the 6th century B.C.

2. The daughter of Diblaim who, although she was a prostitute, married Hosea at God's command (Hos 1:2–3). She seems to have continued her unfaithfulness after marriage. She bore three children in the marriage, but only the first is explicitly stated to be Hosea's (1:3; cf. 1:6, 8), allowing for the possibility that the fathers were different. Expelled from her husband's house because of her continued sin (Hosea 2), she is ultimately readmitted (Hosea 3). The marriage, children's names, separation, and restoration are all mentioned in order to graphically portray Israel's adulterous wandering from her "husband," Yahweh, whom she had married at Mt. Sinai, had been sepa-

rated from in the Exile, and had been restored to under Ezra and Nehemiah.

**GOMORRAH** (PLACE). See SODOM AND GOMORRAH (PLACES).

**GOOD** (NT). In modern English versions of the NT, "good" appears as a translation of *agathos*, *kalos*, and *chrēstos*. In the Greek text, each of these terms, with their cognates, has specific nuances. The nuances vary somewhat from one NT author to another, as does the preference for one term or another. In the whole of the NT, *agathos* appears 107 times, *kalos* 104 times, and *chrēstos* 7 times.

### A. The Synoptics

*Agathos* denotes the significance or excellence of a person or a thing, frequently in the moral sense. In the Synoptics it is used often by Matthew (16x) and Luke (17x), and much less often by Mark (4x). Three of the Markan usages are in a dialogue between a (rich young) man and Jesus: "'Good teacher, what must I do to inherit eternal life?' And Jesus said to him, 'Why do you call me good? No one is good but God alone'" (Mark 10:17–18). Jesus' response does not so much deny the goodness of Jesus himself as it emphasizes the goodness of God. In this way, the Markan Jesus recapitulates traditional biblical teaching about the goodness of God, a teaching likewise reflected in the *qal wahomer* argumentation (a rabbinic argument from the lesser to the greater of Matt 7:11 (= Luke 7:13). According to Mark, God's goodness is manifest in his giving the gift of eternal life.

The Markan dialogue, found also in Luke 18:19, is slightly modified by Matthew who presents the interrogation as focusing on an ethical good to be achieved as a condition for entrance into eternal life. While most commentators view Jesus' response, "One there is who is good" (Matt 19:17), as a paraphrase of the Markan statement about the goodness of God, Cope (1976: 111–20), followed by Murray (1986), has argued that Matthew has made a statement about the goodness of the Law (cf. <sup>2</sup>*Abot* 6:3). Matthew's emphasis upon the ethical good (Matt 19:16–17) is congruous with Matthew's general ethical interests and his consistent antithetical use of "good," *agathos*, and "evil," *ponēros* (Matt 5:45; 7:11, 17–18; 12:34–35; 20:15 [literally, "Is your eye evil because I am good?"]); 22:10; 25:21–26). Matthew frequently contrasts good and evil persons (Matt 5:45; 12:34–35; 20:15; 22:10; 25:21–26; cf. Matt 12:35).

The Q statements of Matt 7:11 (= Luke 7:13) and 7:18 (= Luke 6:43) reflect an understanding of good as that which is useful. Usefulness seems to be the dominant connotation of *agathos* in the Lukan use of the term, especially in those passages, proper to Luke, where the plural is used in the sense of "useful things" or "possessions" (Luke 1:53; 12:18–19; 16:25). When Luke wants to

emphasize the ethical connotation of "good," he uses another adjective in apposition; thus, "honest" (*kalos*) in Luke 8:15 and "righteous" (*dikaios*) in Luke 23:50.

A passage in the triple tradition, "Is it lawful on the sabbath to do good (*agathon poiēsai*) or to do harm, to save life or to kill?" (Mark 3:4; par. Matt 12:12; Luke 6:9) points to the basic interchangeability of *agathos* and *kalos* within the Synoptic tradition. Whereas Mark uses the pronominal adjective *agathon* and Luke the compound verb *agathopoieō* ("to do good"; cf. Luke 6:33, 35), Matthew employs the adverb derived from *kalos*. That both *agathos* and *kalos* are contrasted with "evil" (*ponēros*), that Matthew writes of both a good (*agathos*) and a sound (*kalos*) tree (Matt 7:17, 18; 12:33), and that Matthew and Luke use *agathos* and *kalos* in parallel sayings (Matt 7:18; Luke 6:43) also point to the essential synonymy of the two terms in Synoptic usage.

Particularly significant is the Synoptics' use of *kalos* (Matthew 21×; Mark 11×; Luke 9×) in ethical exhortation. The term abounds in the parables and other examples of figurative language, e.g., the good fruit (Matt 3:10), good soil (13:8), good seed (13:38), fine pearls (13:45), etc. The common formula, "it is good" (*kalon estin*; cf. Matt 17:4, par. Mark 9:5; Luke 9:33) is frequently used in Synoptic paraenesis, especially in Mark (9:42) with the sense of "it is better to." The good fruit, a metaphor attributed to both John the Baptist and Jesus (Matt 3:10; 7:17 and par.), apparently refers to conduct which Matthew describes as "good works" (Matt 5:16). Christians are expected to do "good works." These, however, are to draw attention not to Christians themselves but to the good Father in heaven.

## B. John

In the Fourth Gospel, Jesus' activity is described as a "good work," a formula which draws attention to the Father as the source of Jesus' work (John 10:32–33). This theological use of *kalos* derives from the same biblical roots as the Synoptics' emphasis on the goodness of God. The Fourth Gospel also attests to speculation about the goodness of Jesus (*agathos*, John 1:46; 7:12), that is, whether the Father is ultimately the source of his behavior. The idea of Jesus as the good shepherd is particular to the Fourth Gospel (John 10:11 [2×], 14). The metaphor has little to do with later and popular romantic ideas about Jesus; rather, the image underscores and highlights the uniqueness of Jesus. Ethical connotations are not absent from the "good deeds" (*agatha*) of John 5:29 and the "good work" (*kalon ergon*) of John 10:33, notwithstanding the more profound issue involved in the latter expression.

## C. Paul and the Deutero-Pauline Literature

Among the NT authors it is Paul who seems most to have reflected on the nature of goodness. The paraenesis of 1 Thessalonians includes the injunction "to do good to one another and to all" (1 Thess 5:15). In some ways, Paul seems to have used *agathos* and *kalos* interchangeably (cf. Rom 7:18, 21). In *Romans*, where *agathos* occurs most often (21×) in the NT, Paul reflects on the goodness of God and the good that humans strive to accomplish. The diatribe of Rom 2:1–11, addressed to the presumed upright, recalls the biblical conception of God's goodness, manifest in the gift of eternal life. It warns that God's

goodness (*chrēstotēs*) is not construed as a reluctance to punish; glory, honor, immortality, and peace are given only to those who truly do good (Rom 2:7, 11). Rom 7:7–25 reiterates rabbinic teaching about the goodness of the law, but states that the power of sin uses the law to entice people to sin. Thus, humans do not accomplish the good that they intend. Elsewhere, Paul includes goodness among the fruit of the Spirit (Gal 5:22); from the power of the Spirit comes the goodness of humans (Rom 15:14). Paul, then, views goodness in a cosmic perspective and considers the goodness that accrues to humans to be the result of God's empowering gift.

The Deutero-Pauline literature seeks to actualize the Pauline tradition. Eph 2:7 looks to the manifestation of God's goodness (*chrēstotēs*) among us, mediated through Jesus Christ, in the age to come. In contrast, the very creation of God is good (1 Tim 4:4), and Titus (3:4) views the earthly presence of Jesus as a manifestation of divine goodness. Peculiar to the Pastoral Epistles is the use of "good works" (*kala erga*) as a summary description of the Christian life (1 Tim 6:18; Titus 2:7, 14; 3:8, 14). The implication is that Christians are expected to live according to the predominant moral norms of the times; in fact, according to a rather bourgeois ethic. (For further discussion, see *TDNT* 1: 10–18; 2: 536–56; Käsemann *Romans* HNT.)

RAYMOND F. COLLINS

**GOOSE.** See ZOOLOGY (FAUNA).

**GOPHER WOOD.** See FLORA.

**GORGIAS** (PERSON) [Gk *Gorgias*]. General in the Seleucid army, known only through his activity against the Jewish rebels under Judas Maccabeus (1 Macc 3:38; 2 Macc 8:9). He was one of the commanders of the Seleucid forces in the battle of Emmaus, and was considered to be a professional in military affairs. It was probably Gorgias' initiative to chase Judas into the mountains and to deprive him of the possibility of dictating the place and timing of the battle (1 Macc 4:1). Nevertheless Gorgias' tactics failed in the face of Judas' superior strategy.

Gorgias, in all probability the same person in both 1 and 2 Maccabees, is featured also in the battles, which took

place later on the S borders of Judea. He is fighting in conjunction with the Idumeans and in the region of Jamnia, and is assumed to be a governor of Idumea. Gorgias was victorious in a battle at Jamnia against Jewish commanders, who disobeyed Judas' commands (1 Macc 5:59; cf. 2 Macc 10:14–17).

Gorgias is mentioned as governor of Idumea in 2 Macc 12:32. He was conducting battle against Judas at the neighborhood of Marissa, and was forced to retreat to that city (2 Macc 12:32–35; cf. 1 Macc. 5:65–68, where Gorgias is not mentioned).

In summary, Gorgias seems to have been a professional soldier and an able commander in the Seleucid army, though Judas surpassed him by far.

URIEL RAPPAPORT

**GORTYNA** (PLACE) [Gk *Gortynas*]. Second most powerful city in Crete during the Hellenistic period, located near the sea on the river Letheus in south-central Crete (1 Macc 15:23). Gortyna was an ancient city and, according to Homer, was famous for its walls (*Il.* 2.645). Strabo notes that it was second only to Cnossus in power and vied with it for control over Crete (*Geog.*, 10.4.11). Gortyna's legal code (5th century B.C.E.) has been of considerable importance to the study of ancient Greek jurisprudence since its discovery in 1884 at *hagioi deka* by Federico Halbherr and Ernst Fabricius (Kohler and Ziebarth 1912: iii–viii). In 1 Macc 15:23, Gortyna is listed as one of the recipients of a letter from the Roman consul Lucius recommending support for the high priest Simon and his fellow Jews in their quest for independence. Lucius further requests extradition for any Jew fleeing from Simon and taking refuge in those cities to which his letter was sent. The letter from Lucius was addressed to cities which would have had trade relations with Judea and, with the presence of a Jewish commercial community, would have been a possible haven for opponents of Simon's rule. This was certainly the case for Cyrene and Rhodes and seems plausible for other cities in the list as well, including Gortyna. That Gortyna was the only Cretan city in the list, and one that was near the sea, suggests that Gortyna was the chief commercial outpost for Judean interests in Crete.

MICHAEL E. HARDWICK

**GOSHEN** (PLACE) [Heb *gošen*]. Region in the eastern Egyptian Delta where the Hebrews lived during their stay in Egypt. Though some authorities argue otherwise (e.g., North 1967: 83), this is a place distinct from (1) Goshen on the S border of the land said to have been occupied by Joshua (Josh 10:41) and (2) Goshen in the hill country of Judah (Josh 15:5). In both latter cases, the LXX renders the spelling *Gosom*, suggesting that this tradition considered them to be localities other than the Goshen in Egypt.

When Jacob and his family migrated to Egypt due to a famine in Canaan, they settled in "the land of Goshen," which provided the necessary pasturage for their flocks

(Gen 46:28–34; 47:1–10). The Egyptian pharaoh granted permission for their stay and appointed members of Jacob's family as overseers of royal possessions, presumably animal herds, since it was as shepherds that the Hebrews had presented themselves (Gen 46:33–34; 47:6). The family prospered in Goshen, and its descendants still lived there at the time of the Exodus (Exod 8:18; 9:26).

There has been a long debate over the precise location of the Egyptian Goshen. In the LXX, Goshen in Egypt is rendered as *Gesem* or *Gesem Arabia* (Gen 45:10; 46:34). *Arabia* was used by Herodotus to refer to the area from the Nile to the Red Sea and, more specifically, by Pliny and Ptolemy the Geographer to designate the 20th Lower Egyptian nome, or administrative district (Helck 1975: 197–98). This nome, attested first in Egyptian texts of the 8th century B.C.E., lay on the border of the eastern Delta in the region of modern Fâqûs and Saft el-Hinna. Fâqûs is ancient Phacusa, which, according to Ptolemy, was the capital of the Arabian nome, and Saft el-Hinna preserves the ancient name *Pr-Spdw*, "Domain of (the god) Sopdu," the Egyptian term for the 20th Lower Egyptian nome. Support for this has been seen in a place name, generally read *Gsm.t*, found in the geographical lists of the Ptolemaic temples at Edfu and Dendera and on a Ptolemaic shrine from Saft el-Hinna itself. *Gsm.t* has been equated with the LXX *Gesem (Arabia)*, providing internal Egyptian evidence for the location of the biblical Goshen at the latter site. However, there are two philological difficulties: the reading *Gsm.t* for the Egyptian geographical term is not at all certain (Vergote 1959: 184–86), and Greek *Gesem* cannot be derived from the older Hebrew *gošen*.

An alternative has been suggested by Rabinowitz (1956: 5) who believes that the place name *Gesem* reflects the name of Geshem, a N Arabian ruler of the mid 5th century B.C.E., mentioned on a silver bowl found at Tell el-Maskhûta in the Wadi Tumilat. This man Geshem, the same "Geshem the Arabian" who was the adversary of Nehemiah (Neh 2:19; 6:1–2, 6), was a Persian official whose influence reached as far as the E Delta. His fame was such that that region came to be designated by his name. The "land of *Gesem (Arabia)*" in the LXX would thus refer to a well-known personage—"land of Geshem (of Arabia)"—and this would be more likely to have been understood by the Jewish audience of the time. This theory does away with both the questionable Egyptian evidence and the lack of any philological connection between the Hebrew and Greek terms.

The precise location of *gošen* of the Hebrew text remains problematic. The basic requirement for Jacob and his family was pasturage for their herds; the general region of the E Delta fits this admirably. Egyptian texts speak of other Canaanites moving into that area for precisely this reason, and their presence was carefully recorded in official frontier journals. The biblical references clearly indicate that the Hebrews settled *within* Egypt, and the story of Moses in the bulrushes (Exod 2:3–9) shows they lived along the Nile in proximity to the royal family and its official residence. Furthermore, the phrase "in the land of Goshen" of the P-source is replaced in the J-source by "in the land of Ramesses" (Gen 47:11). Hebrew tradition evidently considered "Goshen" and "Ramesses" to be the same place, bringing into focus the claim that the Hebrews

engaged in building activities at the cities of Ramesses and Pithom (Exod 1:11).

The city called *Pr-R<sup>c</sup>mssw-mry-<sup>3</sup>Imn*, "Domain of Rameses, beloved of Amon," or sometimes simply "Ramesses," was the royal residence city of the Empire built on the site of the old Hyksos capital Avaris (Bietak *LÄ* 5:128–46). There is little doubt that it is to this city that the biblical narrative refers. While founded earlier than the period of Ramesses II, the royal residence city came to be associated mostly with him; hence its name. Over the past decades, the city has been identified with many Delta sites, though it now seems certain that it was located at Tell ed-Dab<sup>c</sup>a/Qantir, 7 km N of modern Fâqûs, thus within the region later designated as *Arabia*, the 20th Lower Egyptian nome.

Pithom—*Pr-<sup>3</sup>Itm*, "Domain of (the god) Atum"—has traditionally been identified with Tell el-Maskhûta in the Wadi Tumilat. New excavations at this site, however, show that the town was not actually founded until the late 7th century B.C.E. Uphill's suggestion (1968–69) that Pithom was rather located at Heliopolis near Cairo is much more plausible.

The evidence at hand suggests that the biblical "land of Goshen" was located in the E Egyptian Delta in the general region of modern Fâqûs, Saft el-Hinna, and Tell ed-Dab<sup>c</sup>a/Qantir. In Egyptian, this region was known as the "Domain of Sopdu," the 20th Lower Egyptian nome; classical writers referred to it as *Arabia*. The translators of the LXX, apparently modernizing the narrative for a contemporary audience, substituted *Gesem (Arabia)* for the original Hebrew *gošen*. There is no known Egyptian equivalent for either the Greek or the Hebrew term.

WILLIAM A. WARD

**GOSPEL GENRE.** "Gospel" as a designation for genre refers to a variety of early Christian writings both inside and outside the canon. The term is not used in this sense in the NT, and the present superscriptions of the four canonical gospels according to Matthew, Mark, Luke, and John did not form part of the original manuscripts. Although these writings are commonly referred to as "gospel" as an indication of genre, this practice probably originated in the 2d century C.E. (cf. *Did.* 15.3–4; 2 *Clem.* 8.5; *Mart. Pol.* 4.1) and was only established by the 4th century. Several writings outside the canon, some of a totally different content and text type, came to be known as "gospels." It is normally argued that noncanonical gospels were called "gospels" in view of the titles given to canonical "gospels." Thus, according to some scholars, the noncanonical gospels are apocryphal and therefore fictional and inferior. The question of "gospel" as genre is often, in view of this, restricted to the text type of the four canonical gospels. It is not correct to make canonical versus

noncanonical *a priori* a norm for the discussion of the gospel genre. On the other hand, there seems to be sufficient reason to regard the canonical gospels as a distinct class of texts.

### A. Can One Speak of a Gospel Genre?

1. Canonical Gospels
  2. Noncanonical Gospels
- ### B. Gospel, a Unique Genre?
1. An Evolutionary Model
  2. Analogical Explanations

### C. What Then Is the Gospel Genre?

#### A. Can One Speak of a Gospel Genre?

Genre can be described either by comparison of generic types and subtypes (for example, drama, epic, lyric, novel, biography, sonnet, and so on) or in terms of the organization of the material in a given text (for example, narrative, argument, exposition, description, and listing). Until recently, discussions about the gospel genre were restricted to the first method of classification of texts, and the gospel genre was regarded as *sui generis*; that is, unique. On the other hand it is clear that the canonical gospels are narratives and thus comparable to other narrative texts of antiquity. Not all "gospels," however, are narratives; nor do they all share the same features. This gives rise to the question of whether one can speak of a gospel genre?

**1. Canonical Gospels.** It is maintained in many circles that the author of the gospel of Mark created a unique genre in writing his gospel. By making use of oral and written sources he created a text of exceptional character. It is regarded as a passion narrative with a long introduction. Some scholars assert that, contrary to the other gospels, Mark's gospel does not only contain preaching (*kerygma*) but that it is also *kerygma*. It is maintained that, in comparison to the other canonical gospels, Mark's gospel is unique. Matthew made use of Mark in the compilation of his gospel but laid far more stress on the teaching of Jesus. The gospel of Matthew is a composition of halachic and apocalyptic discourses in a narrative framework. John's gospel is a composition of *semeia* (signs) and revelatory speeches, and Luke wrote a *vita* (life), or history, of Jesus. According to this view, Mark's gospel is the only true "gospel." This makes it hardly possible to speak of a gospel genre. It is clear, however, that the foregoing argument is based on the idea that Mark's gospel is unique and that it presents a different genre because it is regarded as *kerygma*. This view does not account for the fact that all four gospels are narratives, albeit narratives of which the character and arrangement of material are in many respects different. Once the narrative character of the gospels is taken seriously, there seems to be little reason to argue that they are not of the same genre.

**2. Noncanonical Gospels.** Neither from the point of view of literary character nor from the perspective of content is it possible to regard as of the same genre all the noncanonical texts which are called gospels. These texts include collections of sayings of Jesus, infancy and miracle stories, post-Resurrection discussions between the risen Lord and his disciples, speculative dialogues, meditations, and theological and ethical treatises. The corpus of gospel texts originating from the 2d century and later has been

expanded by the discovery of the "gospels" of Nag Hamadi. Although there is often a very clear relationship between the NT and these texts (cf. *Gospel of Thomas* and the hypothetical sayings collection of Q), the differences in genre are obvious. In view of these and other noncanonical texts, however, some scholars argue that one should broaden the definition of "gospel genre" by including independent sayings collections, revelatory speeches, aretologies (stories of miracle workers), and narratives such as the canonical gospels. This would make "gospel genre" a contradiction in terms, since no genre could consist of such dissimilar text types. It might be possible to trace back to the canonical and precanonical gospel traditions the origin of the different texts which now belong to the so-called gospel-literature, but that does not mean that all of them should therefore belong to the same literary genre as the canonical gospels. The *Gospel of Thomas*, for example, is clearly not a narrative. The *Gospel of Mary* and the *Gospel of Philip* are also not related to the same genre, even though they have material in common with the canonical gospels. The canonical gospels are narratives about the life, deeds, and words of Jesus, while most of the non-canonical narrative gospels are narratives about an aspect of his life.

In view of the great variety of texts that are called "gospels," it seems necessary not to confuse the term *gospel genre* with the name *gospel*, which has been given to texts of different genre. The canonical gospels are narratives, and in this regard it would be possible to speak of a subgenre of narrative as gospel genre.

### B. Gospel, a Unique Genre?

In view of the language and style of the gospels, it has been argued that it is impossible to compare them to literary texts from the Hellenistic and Semitic world of the same period or earlier. The gospels are folk literature, it is argued, and therefore should not be compared with contemporary literary texts. Because Justin and Papias, for example, incorrectly regarded the gospels as literature of the same quality as contemporary Hellenistic and Semitic texts, they compared the gospels with these writings. It is for apologetic purposes that Justin (*I Apol.* 66.3) calls the gospels *apomnemoneumata*, that is "memoirs" (of the Apostles). He probably wanted his readers to believe that the gospels were of the same quality as the Hellenistic memoir literature (cf. Xenophon's *Mem.*). According to some scholars, there seems to be no reason to believe this. Papias' remarks about the literary character of Matthew and Mark are in no way more credible (cf. Eus. *Hist. Eccl.* 3.39.15). In the light of this, the question arose as to whether there is any text type of antiquity which has the same genre characteristics as the gospels. The answers given to the question are basically of two kinds: On the one hand, the gospel genre is explained in terms of an evolutionary model; on the other, it is explained in terms of analogy.

**1. An Evolutionary Model.** The evolutionary model has dominated discussions about the gospel genre for the greater part of the 20th century. This was the result of the rise of form criticism as a tool in biblical criticism. Convinced by the idea that the gospels were folk literature and not biographies, as some maintained, some scholars asserted that the gospels developed from cult legends and

narratives, or the basic outline of the Christian *kerygma*. The early Christians were storytellers, and they used the stories of and about Jesus for cultic purposes. Mark collected some of these traditions and wrote a gospel. Except for other folk literature, there are no parallels to the gospel genre which Mark created. This form has no literary genealogy. Through a process of development which was influenced by the emphasis on the death and resurrection of Jesus, on missionary activities of the early Church, and on its eschatological expectations, these traditions grew or developed into the gospel form. Mark, the first person to write a gospel, was more of a collector than an author. Within the evolutionary model, various solutions have been given to the problem of gospel genre. All of these solutions are related to the idea of evolution of the gospel material and its form.

In the first place, some postulate that the gospel genre is the end product of a process of development of the primitive *kerygma*, which proclaimed the passion, death, and resurrection of the incarnated Lord (cf. 1 Cor 15:1–17). The gospel genre presents the final phase in the evolution of this early Christian *kerygma*. A form of literature which is *sui generis* developed from the cult legend about the death and resurrection of Jesus. According to this view, the absence of biographical detail about the birth, education, development of personality, background, and character of Jesus is explained by the fact that the gospel originated from this cult legend and not from the life story (biography) of Jesus. The gospel genre evolved from the traditional core of beliefs of the Christian community without any literary concerns. One should therefore not be surprised that the gospel genre has no literary parallels. Contrary to biographical literature, the contents of the gospel text focus on the passion and resurrection of Christ. A gospel is in this view *kerygma*—the *kerygma* about the Passion with an extended introductory narrative.

Closely related to the previous explanation of the uniqueness of the gospel form is the theory of an original outline or framework from which the gospel genre developed. The framework serves as the basic structure or skeleton for the gospel material. For example, it can be found in Mark 1:14–15 and Acts 10:34–43. Traditional material, which included more than material about the death and resurrection of Christ, was inserted into this framework. It also contained the idea of fulfilled Scripture and the return of the Lord. Other scholars found other frameworks (such as the so-called Hellenistic myth in Phil 2:6–11 or the Hellenistic-Jewish-Christian credo in Rom 1:3–4) that form the base into which other traditions were inserted. In this way a unique literary form, the gospel genre, evolved out of a kernel of cult beliefs.

Although it was an individual person who wrote down the traditional material in the form of a gospel, the creative power behind the gospel genre was the primitive Church as a cultic community. In this argument, the individual as author is replaced by a collective group that was responsible for the origin of the literary form. According to this view there is no place for the creativity of the mind of an individual author. It is only since the rise of redaction criticism that more attention has been given to the individual editors of the different gospels and that the idea of the gospel as a unique literary form without parallel in con-

temporary literature has come to be questioned. Although the idea of the development of the *kerygma* explains the growth of tradition, it cannot explain the characteristics of genre. There are only a limited number of ways in which any communication—that is, any text—can be arranged, and the organization of material in a text determines its genre. In the light of this, many attempts have been made to determine the place of the gospels in the history of literature and to explain the text type “gospel.”

**2. Analogical Explanations.** Before the rise of form criticism, it was customary to compare the gospels with the Hellenistic *vitae* (ancient biographies) and memoir literature like the *Memorabilia* of Xenophon, Arrian's *Epictetus*, and Philostratus' *Life of Appollonius of Tyana*. In recent years the search for literary parallels of the gospel genre was reopened, and scholars made fresh attempts to find possible parallels either in Hellenistic or in Semitic literature. In the search of an ancient genre which could have served as a model for the first author of a gospel, analogies of many different types of texts have been found in ancient literature. In addition to the Hellenistic *vitae* and memoirs of the rulers and philosophers, other kinds of texts have been taken into account, such as aretalogical biographies, tragedy, tragicomedy, and Socratic discourses. From the Semitic point of view, the gospels have been compared with apocalypses, the legend of Ahikar, Exodus, the book of Jonah, a Passover Haggadah, Midrashim, and the Mishnah. What is remarkable about these comparisons is that most of them were based on an explanation of the gospel genre derived by form criticism and not on their own merit.

The gospels have been associated with biographies in various ways during the past. In recent years the conviction has grown that the gospels reveal features of ancient biographies. Recognizing the differences between the gospels and ancient biographies, as well as the diversity in the different types of biography of the ancient Greco-Roman and Semitic worlds, a growing number of scholars maintain that biography is the only generic text type with which the gospel genre can be compared. Taking into account the objections raised against the comparison, it nevertheless appears that although the gospels fall short in literary style and language usage, they are nothing less than biographies. It has been argued, for example, that the gospel genre comes closest to the type of biography in which the purpose is to praise a person by accentuating his life, works, and teachings. This type of biography is called *encomium*, or “laudatory biography,” and examples of it can be found in the writings of Polybius (cf. *Hist.* 10.21.8), Cicero (*Fam.* 5.13.3), Lucian (*Hist. conscr.* 7), Cornelius Nepos (*Pelopidas* 16.1.1), and—according to this view—also in the gospel genre. Closely related to this view is the search for aretalogical biographies in the Greco-Roman world as possible models for the gospel genre. From a Semitic perspective, the gospel genre has been compared with the “biography of a righteous person” found in the Prophets. The purpose of such a biography is to portray paradigmatically the suffering of a righteous person. Jesus is portrayed in such a manner in the gospel of Mark, which served as a model for the other evangelists when they wrote their gospels.

In all these studies it is not so much a particular biogra-

phy, which served as an analogy for the first author of a gospel, that is emphasized as it is the generic type of text—or more specifically a story—about the life, works, and teachings of a person. In the analogical approach, the uniqueness of the gospel genre as genre is denied in view of the features this text type shares with other texts of the same generic kind.

### C. What Then Is the Gospel Genre?

In conclusion, the question of the gospel genre is complicated enormously by the general confusion surrounding genre in literary criticism and by the role which the origin and growth of the gospel materials play in discussions about the matter. If it is granted that genre can be described in terms of the organization of material in a given text and by comparison between generic types, it is clear that all four canonical gospels are narratives and that they reveal features of ancient biographies despite the fact that they are not of the same literary standard. In view of this it would be possible, for the sake of convenience, to speak of a subtype of narrative as gospel genre. Based on these assumptions, it is unnecessary to regard the so-called gospel genre as *sui generis*. The question of who wrote the first gospel is immaterial to the question of how to define the gospel genre. The first is a historical problem; the second is a literary one.

The implication of defining the genre of the gospels as a subtype of narrative is that very few so-called noncanonical “gospels” would qualify to be called “gospels” simply because they are not narratives.

**GOSPEL HARMONY.** See HARMONY OF THE GOSPELS.

**GOSPELS, APOCRYPHAL.** Apart from the four gospels, which by tradition have been passed down to the Church as part of the canonical NT corpus, early Christianity produced a number of other writings that also might legitimately be called “gospels.” Like the canonical gospels, all of these apocryphal gospels claim in some manner to transmit the words and/or deeds of Jesus. Unlike the canonical gospels, they come in a variety of different literary forms, from a simple collection of sayings such as the *Gospel of Thomas* to the complex series of speeches and

discourses that make up a work such as the *Dialogue of the Savior*. They also derive from a variety of different periods within the development of early Christianity, from the 1st century to the 4th, or even later. See THOMAS, GOSPEL OF, and DIALOGUE OF THE SAVIOR.

The plethora of forms presenting themselves under the titular designation "gospel," together with the fact that not all early Christian works claiming to offer the reader an account of the words or deeds of Jesus actually call themselves "gospels," naturally raises the question, What is a "gospel"? The question has received much discussion, yet with little in the way of agreement. The variety of forms to be found among the apocryphal gospels make it clear that the term "gospel" should not be used to refer to a particular genre, such as the quasi-biographical genre shared by the four canonical gospels, but rather to a larger body of literature, which itself encompasses a multiplicity of forms and genres. Accordingly, scholars have gradually come to use the following or similar categories when discussing the variety of apocryphal gospels known to have existed in antiquity.

### A. Sayings Gospels

The *Gospel of Thomas*, a collection of sayings, all of which are attributed to Jesus, is the single example of this genre known to have survived antiquity. How many other such "sayings" gospels were assembled by early Christians is not known. Most scholars today accept the hypothesis that the authors of Matthew and Luke made use of such a gospel in the composition their respective narrative gospels. Several attempts to reconstruct this gospel, commonly referred to as "Q" (for the German *Quelle*, or "source"), based upon a comparison of the material shared by both Matthew and Luke, have collectively resulted in a relatively clear understanding of its content and theology.

### B. Revelation Dialogues and Discourses

One of the most popular ways to package Jesuanic traditions in the early Church was to create the literary fiction of a dialogue between Jesus and a prominent figure of early Christianity, in which various sayings of Jesus could be presented as his answers to specific questions posed by the imaginary interlocutor. It is common in such dialogues for the individual sayings to have been combined to form extensive speeches or discourses, which are then placed on the lips of Jesus.

The revelation dialogue or discourse was a versatile genre, serving the needs of the early Church with great utility. Through it, collections of simple sayings could be transformed into expositions of secret, revealed knowledge (*gnosis*), as is illustrated by the *Dialogue of the Savior* or the *Book of Thomas the Contender*. See THOMAS THE CONTENDER (NHC II,7). It was also a medium through which originally pre- or non-Christian religious ideas could be introduced into the Christian sphere (thus the *Sophia of Jesus Christ*, the *Second Treatise on the Great Seth*, the *Pistis Sophia*, or perhaps the *Trimorphic Protennoia*). It could also provide an opportunity to clarify or elaborate on points in earlier traditions. (Thus the *Gospel of Bartholomew* offers instruction on such matters as Christ's descent into Hades, the departure of souls, and the annunciation of Mary.) It could also be used to lend authority to innovative interpre-

tations of Church practices, such as the sacraments (so the *Gospel of Philip*). In fact, innovation was probably the key to the success and popularity of the revelation dialogue. The setting is often a post-Resurrection dialogue between the risen Lord and a disciple. Therefore, the genre lends itself well to the introduction of the novel or innovative expression, because the new material could be presented as something left undisclosed by Jesus during his lifetime, only to be revealed privately to a privileged few after the resurrection. Eventually, revelation dialogue or discourse probably became its own undoing. Pagels has argued that the innovation allowed by the very notion that Jesus continued to appear to select persons after his death and reveal secret knowledge to them soon became cumbersome to an emerging Church seeking to establish some parameters around its traditions, and develop some consistent lines of authoritative leadership (Pagels 1978: 415-30).

### C. Narrative Gospels

There are a number of apocryphal gospels, which, like the canonical gospels, present the tradition in quasi-biographical, narrative form. Many only survive in a state so fragmentary that identification is no longer possible. This is the case with P. Oxy. 840, P. Oxy. 1224, P. Cairensis 10,735, and the so-called Fayyum Fragment. The fragments of P. Egerton 2 are somewhat more extensive, but still do not allow positive identification. Others, such as the *Gospel of the Nazoraeans*, *Gospel of the Hebrews*, or *Gospel of the Ebionites*, survive only through snippets cited by various early Christian authors. Of those that survive more or less intact, a number focus on the events surrounding Jesus' passion, death, and resurrection: the *Gospel of Peter*, the *Gospel of Gamaliel*, and the *Gospel of Nicodemus (Acts of Pilate)*. There are also gospels focusing on the legends of Jesus' childhood, among them the *Infancy Gospel of Thomas* and the *Protevangelium of James*.

### D. Treatises

Finally, there are two documents which carry the designation "gospel" in their titles, but which rightly could only be called treatises or tractates. The *Gospel of the Egyptians* is a Sethian gnostic treatise which incorporates Christian elements into its structure. The *Gospel of Truth* is a gnostic tractate narrating cosmic history from the point of view of the Valentinian school. Neither of these reports the words or deeds of Jesus, and may perhaps even stretch the use of the term "gospel" to its limit.

### E. Sources

English translations or summaries of many of the apocryphal gospels may be found in *The Apocryphal New Testament* (James 1924) or in Edgar Hennecke and Wilhelm Schneemelcher's *New Testament Apocrypha* (1963), an English translation of the fourth edition (1959) of their German collection *Neutestamentliche Apocryphen*. The latter has recently appeared in a new German edition (1987), and a new edition of James' collection is currently being prepared by J. K. Elliott. A new four-volume collection of apocryphal texts is also currently in production. Many of the gospels referred to above come from a hoard of texts discovered in 1945 at a site near Nag Hammadi in Upper

Egypt. English translations of these are to be found in *The Nag Hammadi Library* (Robinson 1988).

Critical editions of a number of apocryphal gospels are also available. For many years Tischendorf's *Evangelia apocrypha*, published originally in 1853 and reissued in 1966, has been the standard critical edition for those preserved in Greek. Critical editions of the Nag Hammadi texts have appeared in the series Nag Hammadi Studies. Critical editions of all of the Nag Hammadi codices are currently in production or imminently forthcoming in this series. Carl Schmidt's text of the *Pistis Sophia* has been published in the same series, as has his text of the *Books of Jeu* from the Bruce Codex. The entire text of BG 8502, which contains the *Gospel of Mary*, the *Apocryphon of John*, and the *Sophia of Jesus Christ*, was published originally by Walter Till in 1955 and reissued in a revised edition by Hans-Martin Schenke in 1972. The texts pertinent to the reconstruction of the Synoptic Sayings Source (Q) have been published by John Kloppenborg (1987). A new fragment of P. Egerton 2 has been published by Michael Gronewald (1987) and should thus be added to the fragment originally published by Bell and Skeat (1935). For critical texts of other apocryphal gospels and fragments, one should consult the appropriate sections of Hennecke and Schneemelcher's *New Testament Apocrypha*.

STEPHEN J. PATTERSON

### GOSPELS, LITTLE APOCALYPSE IN THE.

The expression "little apocalypse" is ambiguous. Commonly, it has been used to denote the eschatological discourse in Mark 13 and its parallels in Matthew 24 and Luke 21. For centuries Matthew was the most widely read of the four gospels, so people usually turned to Matthew 24–25 to see what Jesus taught about the end of the age. Since the 19th century the general acceptance of the priority of Mark, however, has led to the concentration of attention on the Markan version of the discourse.

The interpretation of the chapter took a decisive turn with the publication of Colani's work (1864) on Jesus and the messianic beliefs of his time. Colani's study of the Gospels led him to believe that Jesus rejected the eschatological views of his contemporaries and replaced them with a belief in the organic development of the kingdom of God. Mark 13, by contrast, shows many similarities to Jewish apocalyptic thought, which Colani affirmed Jesus could not have shared. Noticing that the three synoptic versions of the discourse end at v 31 of Mark's account, Colani concluded that Jesus' real answer to the disciples' question in v 3 is given in v 32: God only knows the answer to their question! Accordingly, the intervening passage (vv 5–31) is judged to be an interpolation. Its likeness to Jewish apocalypticism led Colani to describe it as a "little apocalypse" and to postulate that it originated in the Jewish Christian Church.

This hypothesis was immediately taken up by Colani's contemporary, Carl Weizsäcker (1864), and developed in a significant manner. Colani had divided the discourse into three scenes: vv 5–8, the birthpangs; 9–13, the tribulation; and 14–31, the end. Weizsäcker, however, noted that some sayings in the discourse appeared to be authentic words of Jesus, such as the parable of the fig tree in vv 28–29. This raised the problem of the limits of the apocalyptic source of the discourse. Weizsäcker solved it by stressing the threefold division proposed by Colani: The three scenes consisted originally of vv 7–8, 14–20, and 24–27; to these Mark added an introduction concerning false prophets (v 6), repeated between the second and third groups (vv 21–23) warnings about persecution of the disciples (vv 9–13), and added a largely parabolic epilogue (vv 28–37). It is this delimitation of the apocalyptic source of the discourse which is customarily denoted by the expression "little apocalypse." Weizsäcker's definition of it has been accepted by a majority of critical commentators on the Synoptic Gospels, and is elaborated at length by Brandenburger (1984), the latest exponent of Mark 13.

The accord of the commentators has by no means been shared by all writers on the eschatological teaching of

Jesus. An examination of the discussions reveals a high degree of subjectivity in the analyses of the "little apocalypse." Moffatt (1918: 207-9), for example, affirmed: "The contours of the apocalypse are unmistakable; it parts as a whole from the context and forms an intelligible unity," but no one appears to have accepted his own analysis, namely, vv 5-8, 14-27. Some scholars have proposed a fourfold instead of a threefold division of the source; Wendling divided it thus: vv 7-8; 9a, 12; 13b-20a; 24-27 (1908: 155-57). He was followed in a slightly simplified version by Hölscher (1933: 196-97) and by Bultmann (1957: 129), who extended it to include vv 7-8; 12; 14-22; 24-27, 30, and 32. Grayson (1974: 371-87) proposed a quite different division: vv 7, 9, 11, 14-16, 18, 21, and 23. Hartman (1966: 235-41), in an original and significant study, modified the main line of analysis by proposing the source as vv 5b-8, 12-16, 19-22, and 24-27 and interpreting it as a midrash on the apocalyptic visions of Daniel. Hahn (1975: 240-46) extended the source by defining it as vv 7-8, (9-13) 14-22, and 24-31. It will be observed that Hahn has omitted only v 23 from the proposed source vv 7-31. In this he was followed by Pesch, who renounced his earlier adherence to the customary definition of the little apocalypse (1968: 207-18) and added to Hahn's analysis of the source vv 3-5, so omitting from the discourse of vv 3-31 only vv 6 and 23 (Mark *HTKNT*, 266-67).

It was inevitable that someone should at length propose that the entire chapter was taken over from an early apocalypse. Such was the view of Bishop Barnes (1947: 136-37). It was equally inevitable that others should reduce the compass of the source. More than one writer has limited it to vv 14-20 (Goodspeed 1950: 186-88). Holtzmann (1904: 456-57) actually reduced it to vv 14-18. Since vv 15-16 are manifestly from a tradition of the words of Jesus (they occur in Luke 17-31), the term "little" is very appropriate to such an apocalypse. Indeed, it is a misnomer for such a fragment. In the history of endeavors to reconstruct the apocalyptic source of Mark 13, not only has every statement of the chapter been included in it but everyone has been omitted from it as well. The fragmentary nature of the suggested apocalypse and the uncertainty of the links that are thought to bind its elements make it apparent that it is no "intelligible unity," as Moffatt thought. This was acknowledged by W. G. Kümmel (1956: 98), who affirmed, "There is no possibility of establishing an original *literary* sequence between the conjectured components of this apocalypse, so that the hypothesis of a connected apocalyptic basis for this chapter is hardly sufficiently well founded."

It is further to be noted that there are contacts between almost all the contents of Mark 13, including the apocalypse as generally defined, and the teaching of Jesus attested elsewhere in the gospel. The prophecy of the doom of the temple in vv 1-2 is in harmony with warnings of Jesus in Luke 13:1-5, Matt 23:34-39 = Luke 20:49-51, 13:34-35 and closely related to Luke 19:41-44. Verses 5-6 and 21-22 are as plainly related to the Q saying Matt 24:26 = Luke 17:23. The phenomena of wars, earthquakes, famines, and plagues in vv 7-8 are traditional elements in prophetic and apocalyptic representations of the last times and are particularly close to the "four sore

judgments" described by Ezekiel (Ezek 14:12-23). Associated in human experience, they are harmonious with the presuppositions that lie behind the prophecies of Jerusalem's doom, namely the lordship of God over history manifested in his judgments. Verses 9 and 11 form a single sentence in Luke 12:11-12, and v 10 indicates the reason for the persecution, namely the preaching of the gospel of the kingdom. Verse 12 has its parallel in Matt 10:34-36 = Luke 12:51-53 and illustrates the reason for Mark's v 13a. The "abomination of desolation" of v 14 is an apocalyptic symbol well known to the Jews, taken from the book of Daniel. Originally it denoted an idolatrous and blasphemous object in the temple of Jerusalem, but significantly its first mention in Daniel (9:27) is set in a prophecy of the destruction of Jerusalem and its sanctuary, which is the reason for its citation here. The use of the expression makes the prophecy of the temple's destruction in v 2 an eschatological phenomenon; it is the day of the Lord on Jerusalem and its people. This is the reason for the adducing of vv 15-16; they presuppose a threat of war from which one must flee. The saying is reproduced in Luke 17:31, but its earlier explanation is in Mark's context. So also vv 16-17 assume the necessity of urgent flight before a threatening army. Verse 19 cites Dan 12:1 and again harkens back to the situation of v 14, characterizing it as an eschatological "tribulation," which the Lord will shorten for the sake of the elect (v 20).

The substance of vv 24-27 finds parallels in the synoptic representations of the Parousia of the Son of Man (Mark 14:62). When it is recognized that v 22 is linked with v 6, and that v 23 is an isolated saying placed here by Mark, we then perceive an earlier connection between vv 21 and 24 and others following: the alleged secret manifestation of the hidden messiah is contrasted with the revelation of the Son of Man in his Parousia, and that is precisely the purpose of Luke 17:23-24. The theophanic language of the OT prophets in vv 24-25 serves to represent the Parousia of the Christ in v 26 as a theophany, a concept which is already contained in the description of the coming of the Son of Man on the clouds with great power and glory, as in Dan 7:13-14 and Mark 14:62. Such a concept is uniquely Christian; it does not appear in any Jewish apocalyptic work, not even in *1 Enoch* (there is no depiction of the *coming* of the Son of Man in that work). The parable of the fig tree (vv 28-29) is significant as embodying the basic notion of the discourse that events in history can serve as signs of the kingdom of God, a view emphasized by Jesus in Luke 12:54-55 (Matt 11:20-24 = Luke 10:13-15). The language of v 30 is reminiscent of that in Matt 23:26 = Luke 20:51; these latter parallels indicate the original reference of v 30, namely to the day of the Lord on the ancient people of God in the not distant future.

It is evident, accordingly, that the discourse is replete with reminiscences of the tradition of Jesus' words. There is no conclusive evidence that a *single* strand of tradition can be separated as distinct in thought, form, and language from the rest of the chapter as its basis. The reference to *language* is important. Whereas Perrin (1963: 131-32) sought to show that the vocabulary of Mark 13:5-27 is less characteristic of Mark than that in vv 28-37, Lambrecht (1967: 65-260), by his exhaustive analytical study of the discourse, was led to conclude that every sentence

in the chapter bears the stamp of Mark. This does not indicate that Mark composed the discourse *ex nihilo*; rather it shows that he treated the material of the Jesus tradition in Mark 13 as he has elsewhere in his gospel.

It is well known that certain elements of Mark's gospel tradition had already been brought together before he incorporated them in his gospel. This is evident in the controversy narratives (Mark 2:1-3:6) and the parables collection (4:1-32). So it is likely that elements of chapter 13 had earlier been grouped together. In all probability this happened in the primitive Christian catechesis, which preserved the traditions of the instruction of Jesus. In the catechesis, eschatological teaching commonly occurs at the end of collections of sayings of Jesus (cf. the little discourse of Mark 8:27-9:1 and the Matthaean discourse, chaps. 5-7, 10, 13, 18, and 24-25). Apart from any tradition which Mark had received concerning instruction Jesus gave in his last week in Jerusalem, it was natural that Mark's account of the Lord's ministry should conclude with a summary of the teaching of Jesus on the last things. The elements of his teaching will have circulated as disparate items at first, as did most of Jesus' teaching, but signs of early groupings of the sayings may be discerned.

1. *Sayings on the distress of Israel* center above all in vv 14 and 19, and were obviously linked in the tradition with v 2. In due time vv 14-15 and 17-18 were added to vv 14 and 19, and finally v 20.

2. *Sayings on the distress of the Church* are to be observed in vv 9 and 11. Two factors will have caused v 10 to be associated with them: the witnessing activity of the disciples, which was prime cause of their persecution, and the setting of the Church's mission in an eschatological perspective. Verses 12 and 13a became conjoined through the same motive, as also v 13b.

3. *Sayings on pseudo-messiahs and the true Messiah*, vv 21, 24-26. As we have seen, the contrast between the Jewish notion of the secret appearance of the Messiah and the Christian hope of the Parousia of the Son of Man is here set forth. The reference to false messiahs in v 21 attracted the related sayings of vv 6 and 22. The connection between vv 26 and 27 must have been early, as evidenced by 1 Thess 4:16-17 (based on a "word of the Lord").

4. *Sayings on the Parousia and watchfulness*, vv 26-27 and 34-36. It is noteworthy that 1 Thess 4:15-5:11 reflects the thought of Mark 13:24-27, 33-36, so indicating that the theme was current in the catechesis which circulated in the primitive churches.

While these related elements of the catechesis were clearly known in the early period of the Church's life, we cannot assume that they existed in the form of a connected discourse. Mark's disposition of the elements of the discourse indicates the likelihood that he himself brought together the varied eschatological traditions and fashioned them into a unity in light of the situation and needs of the churches he served. If, as is likely, Mark wrote after the Jewish war with the Romans had begun, eschatological anticipation would have been at a high peak, both in Palestine and among Christians in the outer world, for Jewish believers were in many churches throughout the Diaspora, and eschatological expectations would have been stirred everywhere by the events in Israel's land. The same would have applied in the period immediately after the

fall of Jerusalem and the terrible fate of its people. There would have been an urgent desire to know what Jesus had said about these events and the end of the age. Mark had good reason to warn Christians against false prophets and messiahs (they were active in his time!) to encourage his fellow believers in faithful ministry and conduct and to inspire them to continue in faith and hope in Christ. This situation would have provided the necessary impulse to gather into one collection the sayings in the tradition of the judgment of Israel, the vocation of the Church, the coming of the Lord, and the call to maintain alertness of spirit.

The chapter as a whole naturally divides itself into four sections: (1) vv 1-4, Introduction—prophecy of the temple's doom and the disciples' question; (2) vv 5-23, the Tribulation of Israel and of the Church; (3) vv 24-27, the Parousia of the Son of Man and the Gathering of the People of God; and (4) vv 28-37, the Times of Fulfillment and Exhortations to Watchfulness.

If sayings on the four topics of Mark 13 had already been linked in the catechetical tradition, at least some of these groupings would have been known to Luke and Matthew, quite apart from Mark's ordering of them in his discourse (1 Thessalonians 4-5 and 2 Thessalonians 2 suggest that Paul was acquainted with various elements of them). Both Matthew and Luke show evidence of various records of sayings in the discourse. On the least estimate, Luke appears to have combined with Mark's record different forms of sayings at his disposal, notably in Luke 21:20-24 and 25-28, while in 21:34-36 he provides an altogether different ending of the discourse from that in Mark 13:33-37. Formidable arguments (Hartman 1966: 226-35; Gaston 1970: 355-65) can be adduced for Luke's possessing an independent form of the discourse, to which he added features of the Markan version. Most scholars, however, consider that Luke followed Mark's outline and incorporated other materials available to him from the catechetical collection. Luke's chief concern in the discourse was to clarify the distinction between events that concerned Israel and those that concerned the wider world in light of the catastrophe that happened to Israel and its people. Contrary to popular opinion, Luke in no way implies a long delay in the coming of the Lord, not even in Luke 21:24; in the NT era the "times of the gentiles," i.e., of gentile domination over Israel, were viewed as lasting for a limited time. So in Dan 7:25 (the source of the idea) the expression "time, times, and half a time" in that passage corresponds with a usage among Jews, where three and a half is a limited number; in eschatological contexts it is applied to a restricted period of suffering (cf. Luke 4:25 and Jas 5:17 with 1 Kgs 18:1). Luke 21:24 is consonant with the general near-expectation of NT writers regarding the coming of the Lord.

Matthew's interest in the discourse is similar to that of Luke's. It is expressed in his wording of the disciples' question in Matt 24:3; they ask first, "When will this be?" (i.e., the time of the destruction of the temple), and then question the time of "your coming [Parousia] and the consummation of the age." This latter issue is Matthew's major concern, and it is seen in his replacement of Mark's brief conclusion of the discourse (Mark 13:33-37) with the lengthy addition of material from the Q-Apocalypse of

Luke 17:22–37, together with that in Luke 12:39–46 and the three parables of Matthew 25. This additional teaching is longer than Mark's entire discourse. It all relates to the coming of the Lord and inculcates the lesson of "watching" or preparedness for the Lord's coming. It is noteworthy that the term *Parousia* occurs in this passage alone in the four gospels (with vv 33, 27, and 29 replacing other expressions in his sources). So also, only Matthew in the NT speaks of "the sign of the Son of Man" in the heavens heralding the *Parousia*; it is a reminiscence and adaptation of the "standard" to which the Jews are expected to rally at the sounding of the trumpet for their deliverance and entry into the kingdom of God, a destiny extended to the nations in Isa 11:10 (see also Isa 18:3, and note the Tenth of the Eighteen Benedictions used by the Jews throughout the centuries: "Sound the great trumpet for our liberty, set up the standard to gather our outcasts, and gather us from the four corners of the earth").

Finally, it is important to note that each version of the eschatological discourse in the Synoptic Gospels is marked by an emphasis on ethical exhortation, expressed especially in the call to be watchful, and for continuance in faith and endurance in Christian action. The apocalyptic element in the discourse is equally evident, for the most characteristic feature of apocalyptic thought is precisely the Lordship of God over history and its end in the kingdom of God. But the parenetic emphasis, present in the discourse from its beginning to its end, is unique among apocalyptic writings. This accords with the general emphasis of Jesus' teaching on the kingdom of God, namely the proclamation of redemptive ethical eschatology and redemptive eschatological ethics.

G. R. BEASLEY-MURRAY

**GOTHIC VERSIONS.** See VERSIONS, ANCIENT (GOTHIC).

**GOTHOLIAH (PERSON)** [Gk *Gotholias*]. An alternate form of the name ATHALIAH.

**GOTHONIEL (PERSON)** [Gk *Gothoniël*]. Father of Chabris, one of the elders of Bethulia (Jdt 6:15). The name in its Greek form appears only in the book of Judith, but is probably a translation of the Hebrew name Othniel (Heb *ʿotniʾēl*; *gamma* replacing *ayin*). Othniel in the OT was the brother of Caleb and the first judge of Israel (Josh 15:17; Judg 1:13; 3:9; 3:11; 1 Chr 4:13; 27:15). Although the two figures are certainly not to be identified, it is possible that the author derived the name Gothoniël from the well-known figure Othniel.

Bible, and the other focusing upon the notion of grace in the New Testament. See also LOVE.

### OLD TESTAMENT

Grace is the favor of God to human beings. The subject of grace in the OT is too vast for comprehensive treatment. Since creation, the redemption and election of Israel, and the gift of the law are all acts of divine favor, a full treatment of grace would have to examine these primal gracious acts of God and much else in the OT (cf. Hals 1980 for an example of such treatment). The present discussion shall be limited to a consideration of three terms for grace that come together in the confession of Exod 34:6 and in the echoes and reflexes of this confession elsewhere in the OT.

The divine self-revelation to Moses in Exod 33:19–34:9 includes the creedal statement of Yahweh as “God compassionate (*ʔēl raḥūm*) and gracious (*wēḥannūn*), patient and abundant in love (*ḥesed*) and fidelity (i.e., constant, reliable love).” The two adjectives *raḥūm* and *ḥannūn*, and related forms derived from the same root, and the noun *ḥesed* all contribute to the meaning of grace in the OT.

The creedal affirmation of Exod 34:6 is quoted once more in the Pentateuch (Num 14:18), where Moses appeals for divine forgiveness of the people on the basis of God’s self-revelation in Exod 34:6. It is quoted three times in the Psalter (Pss 86:15; 103:8; 145:8) and alluded to in abbreviated form twice more (Pss 111:4; 116:5). Ps 112:4 is ambiguous, in that “gracious and compassionate (*ḥannūn wēraḥūm*) and righteous” seem to refer to the just human being; however, Dahood in his commentary understands the formula as referring rather to the deity (*Psalms 100–150 AB*). In the prophetic literature, the confessional formula of Exod 34:6 is quoted twice (Joel 2:13; Jonah 4:2). It is quoted in Neh 9:17 (cf. Neh 9:31) and alluded to in 2 Chr 30:9. A previously unnoticed allusion to the confession occurs in Ps 77:9–10, where the poet in distress calls into question the self-revelatory affirmation: “Has his love (*ḥsdw*) ceased forever? Has his promise failed forever? Has God (*ʔēl*) forgotten to be gracious (*ḥnnwt*)? Has he shut up his compassion (*ḥmtyw*) in anger?” In this text the three affirmations about God in Exod 34:6 are recalled and questioned; and in both Exodus and the psalm, God is addressed by the divine name El.

The first term to be considered is the root *hnn* (grace), which occurs about 200 times in the OT. Derivatives of the root include the verb *ḥānan* (“be gracious to, act graciously toward”), the nouns *ḥēn*, *tēḥinnā*, *taḥānūnim*, and *ḥāninā*, and the adjective *ḥannūn*. The verb *ḥanan* (78 occurrences) means “be gracious, show favor to” in the basic (qal) form, and “seek favor” in the reflexive (hithpael) form. Of the 55 uses of the qal verb, 30 occur in the Psalter: of these, there are 15 instances of the imperative *ḥonnēni* (“Be gracious to me!”) in prayers for divine favor: Pss 4:2; 6:3; 9:14; 25:16; 26:11; 27:7; 30:11; 31:10; 41:5, 11; 51:3; 56:2; 86:3, 16; 119:29; and 132. Note also Pss 123:3 (“Be gracious to us”) and 67:2 (“May Yahweh be gracious to us”).

The noun *ḥēn* (“grace, favor”) occurs 69 times; a frequent occurrence is in such expressions as *māsāʔ ḥēn bēʔēnē* (“find favor in the eyes of”), which serves as the passive of *ḥnn* (“find favor” = “be favored”), and *nātan ḥēn bēʔēnē*

(“give favor in the eyes of”). The idiom “find grace, favor in the sight of (someone)” refers to the positive disposition of the one acting graciously and granting favor, a disposition which is manifested in the bright, happy countenance of the one granting favor. In Num 6:25, “May Yahweh make his face shine on you” is followed by a form of the verb *hnn* (“and may he be gracious to you”). Without *hnn*, there are a number of similar expressions denoting joy or happiness in speaking of the light of one’s face; the light of Yahweh’s face, his gracious benevolence, is referred to in Pss 4:7; 31:17; 44:4; 67:2; 80:4, 20; and 89:16. The prayer “Turn to me and be gracious to me!” (Pss 25:16; 86:16; 119:132) asks God to turn his bright happy countenance toward the person praying, a gesture which indicates that God is favorably disposed toward the petitioner. The opposite sentiment of divine wrath or anger is shown by God’s hiding his face: cf. Pss 27:7 (“Be gracious to me”) and v 9 (“Do not hide your face from me”) and 30:8 (“When you hide your face from me, I am terrified”) and v 11 (“Be gracious to me”).

The nouns *tēḥinnā* (25 occurrences) and *taḥānūnim* (18 occurrences) mean “supplication, prayer for favor”; there is also a single occurrence of another nominal form *ḥāninā* (Jer 16:13), where “I will not show (lit. “give”) you favor” is equivalent to “give favor, show kindness” (*nātan ḥēn*), an expression occurring 7 times (Gen 39:21; Exod 3:21; 11:3; 12:36; Ps 84:12; Prov 3:34; 13:15. With the exception of Prov 13:15, all the other cases have God as subject).

The adjective *ḥannūn* (“gracious”) occurs 13 times: in Exod 34:6 and the passages which quote or allude to this creedal statement (listed above), and in Exod 22:26. With the possible exception of Ps 112:4 (mentioned above), *ḥannūn* is only used of the deity.

In both human-human relationships and human-divine relationships, *ḥēn* (“grace”) in the OT involves a positive disposition of someone toward another (cf. NAB translation of Gen 39:21; Exod 3:21; 11:3; 12:36). It is an undeserved gift or favor, which can be requested, which is freely and unilaterally given and not coerced, and which can be withheld. Grace is characteristically a favor for a specific occasion given to an inferior by a superior, a person in authority (e.g., a king: 1 Sam 16:2; 27:5; 2 Sam 14:22; 16:4; 1 Kgs 11:19; a royal official: Gen 47:25; Yahweh: Exod 22:26). This uncoerced and unilateral favor is more than a disposition of passive benevolence on the part of God. It is *action* that is requested, God’s action in aiding the poor, delivering the oppressed and the mortally ill (Exod 22:24–26; Pss 9:14; 30:11; 31:10), and forgiving sin (Pss 41:5; 51:3; 103:8–10) after repentance (Isa 30:19; Joel 2:13).

The second term to be considered is the noun *ḥesed*. While no English translation captures the full content of this term, the standard renderings include “kindness,” “steadfast love,” “covenant love,” and the like. *Ḥesed* occurs twice in the confessional formula in Exod 34:6–7: in v 6 the expression is *rab-ḥesed wēʔemet*, “abundant in *ḥesed* and fidelity” (a hendiadys more accurately translated “abundant in reliable, unfailing *ḥesed*”); and in v 7 where the expression is *nōšēr ḥesed lāʔālāpīm*, “keeping *ḥesed* for thousands.”

*Ḥesed* occurs some 245 times in the OT, of which slightly more than half (127) are found in the Psalter. As a char-

acteristic of the deity, it occurs in such phrases as (1) "the *hesed* (or pl. *hasdê*, "acts of *hesed*") of Yahweh" (1 Sam 20:14; Pss 33:15; 89:2; 103:17; 107:43; Isa 63:7; Lam 3:22); (2) "the *hesed* of Elohîm" (2 Sam 9:3; Ps 52:10); (3) "the *hesed* of El" (Ps 52:3); and (4) "the *hesed* of Elyon" (Ps 21:8). God is further described as "abundant in *hesed*" in Pss 5:8; 69:14; 106:5; Isa 63:9; Lam 3:32; and Neh 13:22. Since such passages all concern the attitude and activity of God toward humankind, they can be understood to speak of divine grace.

The meaning of *hesed* has been illuminated by the important study of Sakenfeld (1978). Building upon and refining previous work, this author lists the following characteristics in her definition of *hesed*: (1) *hesed* is an action rather than simply an attitude or a psychological state, and the action involved is usually one of deliverance or protection; (2) an act of *hesed* is based upon and performed in an existing relationship, either explicit or implicit; (3) *hesed* is an action requested or expected of someone who is situationally or circumstantially superior to another who lacks power or resources to perform the desired action; (4) *hesed* is extralegal and cannot be coerced; the situationally superior party cannot be compelled to act and remains free not to perform the needed act of *hesed*; and (5) *hesed* is an act which fulfills an essential need that the person in need cannot meet, and for which there is no alternative source of assistance.

The concept of *hesed* describes a human-human relationship, and the responsibilities incurred in such a relationship. When used to describe the divine-human relationship, *hesed* can appropriately be considered a word for grace, i.e., God's free and uncoerced action for individuals or for the whole people, in a situation of grave need, when God is appealed to as the only source of assistance.

As a word describing God's gracious activity toward and assistance for his people, *hesed* is part of the vocabulary of covenant in Israelite religious thought. See also COVENANT. In the Mosaic conditional covenant, which stresses human obedience as the basis for a continuing relationship with the deity, God's *hesed*, involving deliverance and forgiveness for the undeserving, operates even in the context of a broken relationship. Where human sin and rebellion have ended Israel's relationship to God, all that the people can expect is destruction, annihilation; when Israel experiences not divine wrath but God's surprising and unexpected deliverance and preservation of the community, and divine forgiveness, Israel experiences the *hesed* of God. While human *hesed* depends upon an unbroken relationship in good repair between the superior and inferior parties, divine *hesed* is God's gracious and unexpected decision to restore and repair the broken relationship. In the other covenant form operative in God's unconditional commitment to Israel's patriarchs and kings, God's relationship with the human covenant partner is based on the divine promise alone, and thus is not subject to negation because of human failure. Thus *hesed* includes both undeserved deliverance (in the context of the Sinai covenant) and promised divine fidelity (in the context of the royal covenant).

While *hên* and *hesed* as divine characteristics can both be understood as grace (cf. Gen 39:21 where both terms are used), they are distinguishable. *Hesed* involves freely given

and essential assistance by a circumstantially superior or dominant party to an individual or a group in need; it is responsible action *within an existing relationship*. *Hên* also involves a freely given benefit by a superior party to an inferior, but there is *no previous existing relationship* between the two parties.

The final element of the tripartite confession of Exod 34:6 is the description of God as "merciful" (*rahûm*). This term too finds a place in the OT conception of grace, as is indicated by the passages which link divine mercy to the two other words for grace, *hên* (*hnn*) and *hesed*. There are 13 occurrences of the adjective *rahûm*, in 11 of which it is paired with *hannûn* ("gracious"), and all of which refer to God (with the possible exception of Ps 112:4; see above). Only twice is *rahûm* used of God without *hannûn* (Deut 4:31; Ps 78:38). Other forms of the root *rhûm* linked with *hnn* comprise Exod 33:19; 2 Kgs 13:23; Isa 27:11; 30:18; and Ps 102:14. Even more frequently is *rhûm* linked with *hesed*, especially in the Psalter (Pss 25:6; 40:12; 51:3; 69:17; 77:10; 103:4; 106:45-46). Other texts which link *rhûm* with *hesed* outside the Psalter include Isa 54:7, 8, 10; 63:7, 15; Jer 16:5; Hos 2:21; Zech 7:9; and Lam 3:22, 32.

In both secular and theological usages, *rhûm* involves the movement of a superior to an inferior, of the powerful to the weak, provoked by love or pity on the part of the superior and need on the part of the inferior. When used to describe the relationship of God to human beings, such divine compassion or mercy is an appropriate part of Israel's lexicon for grace.

JOHN S. KSELMAN

### NEW TESTAMENT

Grace is love demonstrated by giving; in the gospel, grace is unmerited divine favor, arising in the mind of God and bestowed on his people. It is often considered with regard to its beneficial effects.

### A. Terminology

The common OT terms for God's favorable disposition are *hesed* and *hên*, usually meaning "mercy" and "favor"

(Smith 1956: 33–55). The NT writers prefer to use “grace” (*charis*). It appears most commonly in Acts and the epistles (except 1 John); in the Synoptic Gospels, only in Luke (“favor,” in 1:30; 2:40, 52; also see John 1:14, 16, 17). Besides “grace,” *charis* may also be rendered as “gracious” (Luke 4:22; Col 4:6), “gracious work” (2 Cor 8:6, 7, 19), “favor” (2 Cor 8:4), “credit” (Luke 6:32, 33, 34), “thank” (Luke 17:9); “as a gift” (Rom 4:4), “pleasure” (2 Cor 1:15), “blessing” (2 Cor 9:8), and “approved” (1 Pet 2:19).

The NT writers can also use *charis* in a distinctively Christian way, to describe the loving inclination in Christ (TDNT 9: 391). Thus “grace” is a central term in Pauline soteriology and important in the vocabulary of Acts, Hebrews, and 1 Peter.

### B. Grace as Divine Help and Empowerment

Grace can mean loving help to an individual or to people. Thus, a Christian’s speech “may impart grace to those who hear” (Eph 4:29). The term *charis* is thus translated as “gracious work” in 2 Cor 8:6, 7, 19. It is not here a technical term for the Jerusalem Collection (contra TDNT 9: 393), but rather a description of unusual generosity.

Grace is most often God’s general blessings toward people. For example, God’s grace enabled the Macedonians to donate to the Collection despite their own trials (2 Cor 8:1), and enabled the Corinthians to do the same (9:14). In this they will emulate Jesus’ gracious condescension (8:9).

God’s grace comes to those who are in need and humbly approach God for help. Thus both Jas 4:6 and 1 Pet 5:5 reach back to Prov 3:34: “God opposes the proud, but gives grace to the humble.” God’s grace brings enablement to the helpless, especially the poor and persecuted. Paul had to learn that “my grace is sufficient for you, for my power is made perfect in weakness” (2 Cor 12:9; see Heb 4:16; 1 Pet 5:10). God’s grace includes help in preaching the gospel and in enduring persecution (see Acts 4:33; Phil 1:7).

### C. Grace as God’s Saving Benevolence in Christ

Grace frequently denotes God’s giving of himself in Christ in order to effect salvation for the undeserving. Because of the close connection of grace with God’s work, the former is at times used as a sign for the latter. In Acts the phrase “word of grace” is the gospel of Christ (Acts 14:3; 20:32). Believers are urged to “continue in the grace of God” (13:43). In 1 Pet 5:12 the author testifies that his message is “the true grace of God” (cf. Gal 1:6; Col 1:6). In Acts 11:23 “grace” is a metonymy for the results of salvation—“When he came and saw the grace of God [in the new converts], he was glad.”

Bultmann (BTNT 1: 288–89) understands grace not as the personal quality of a giving God, but as the event of salvation. He wishes to demythologize what he regards as the anthropomorphism of God’s grace and wrath, but the NT writers clearly viewed grace and wrath as inclinations within the mind of God rather than as soteriological events alone. The picture of a loving Father is never far behind the word “grace” (see Eph 1:6–7). In context, divine grace is described in more detail: “But God, who is rich in mercy,

out of the great love with which he loved us . . .” (Eph 2:4; also 1 Tim 1:14; Titus 2:11; Heb 2:9; 10:29).

It was commonplace for the early Christians to trace their salvation directly to the grace of God in Christ. For Paul in particular, a right standing with God was wholly of grace. God’s grace is extended where the gospel is preached and received (2 Cor 4:15; 6:1). Paul is therefore a steward of God’s grace in Eph 3:2, preaching the gospel and declaring God’s good favor to more and more people.

In Rom 3:24, sinners “are justified by his grace as a gift, through the redemption which is in Christ Jesus.” God’s grace is needed to the extent that sin is present, that is, universally (Rom 5:20–21; see 1 Tim 1:15–16). “Grace” in Romans 5–6 is a shorthand both for the gospel and for the liberty with which the Christian serves God apart from the Law (see Rom 5:2, 15, 17; 6:1, 14, 15).

Eph 2:8–9 exemplifies the Pauline emphasis on the incompatibility of a system of works with salvation by God’s grace: “For by grace you have been saved through faith; and this is not your own doing, it is the gift of God—not of works, lest any man should boast.” Grace is “not something proceeding from himself or from his own nature, or from his own will or effort, but something ‘wholly other,’ which proceeds from God and is ‘exhibited’ on the cross of Christ (Rom 3:25–26)” (Whitley 1932: 43–44).

The author of Acts likewise values saving grace. At the Jerusalem Council, Peter refuses to place gentiles under the Mosaic law: “But we believe that we shall be saved through the grace of the Lord Jesus, just as they will” (Acts 15:11; cf. Acts 18:27; 20:24).

Salvation by grace is used as a foil to merit by the Law in several important passages. John uses “grace” to describe the Logos in John 1:14–18: the Word is “full of grace and truth,” we have received from him “grace upon grace.” John contrasts Jesus and Moses by saying that “the law was given through Moses; grace and truth came through Jesus Christ.”

Paul was deeply concerned with salvation by God’s grace as opposed to salvation in any way merited by works: by definition, grace must be undeserved. He states in Rom 4:16 that “that is why it depends on faith, in order that the promise may rest on grace . . .” For the apostle, justification by faith safeguards the pure reality of saving grace: “I do not nullify the grace of God; for if justification were through the law, then Christ died to no purpose” (Gal 2:21). Paul’s opponents warned that salvation by grace alone would lead inevitably to licentiousness; Jude 4 seems to indicate that that might have been one of the perversions of the gospel. But Paul knows that saving grace also means that Christians may find power to live holy lives apart from legalistic structures: “For sin will have no dominion over you, since you are not under law but under grace” (Rom 6:14; see also 6:15; 2 Tim 1:9). A striking parallel to the Pauline emphasis (e.g., in 1 Cor 8:8) is found in Heb 13:9, where the author warns his readers: “Do not be led away by diverse and strange teachings; for it is well that the heart be strengthened by grace, not by foods, which have not benefited their adherents.”

In Gal 5:4 Paul tells certain Christians that they have “fallen away from grace.” Like the Jews of Rom 10:3, the Galatians “who would be justified by the law” are turning their backs on justification by faith, which to Paul is falling

from salvation by grace. In trying to merit the undeserved, they are giving affront to a giving God.

The contrast between salvation wholly by grace and salvation through works is illustrated by divine election. In Rom 11:5-6 Paul states that "there is a remnant, chosen by grace. But if it is by grace, it is no longer on the basis of works; otherwise, grace would no longer be grace." In the apostle's mind, grace is found not only in justification by faith; it also means that those whom God elects are chosen without regard to their religious zeal. Saving faith is also regarded as a gift of God: in Eph 2:9 the whole process of salvation through faith is a gift of grace; Acts 18:27 refers to Christians as "those who through grace had believed" (see also Acts 13:48; 16:14).

In 1 Peter, Peter twice (1:10, 13) speaks of grace as the eschatological revelation of God's saving grace. This certainly does not restrict divine grace to the future, since the author views the whole of the Christian message as grace (5:10, 12). Within the NT, grace as eschatological glory seems to be limited to 1 Peter 1; but note *Did.* 10.6: "May grace come and may this world pass away."

"Grace" is commonly connected with the preaching of the Word. In the NT, however, it is not explicitly used in connection with the sacraments, as is often the case in later theology.

#### D. Grace as Special Endowment for Ministry

Both *charis* and *charisma* are used in the NT to refer to extraordinary divine empowerment for ministry. While *charisma* already had the meaning of "gift" in Hellenistic literature, the NT authors may have used the term of spiritual gifts with a conscious allusion to God's grace in Christ.

Paul received "grace and apostleship," meaning that apostleship was a gracious gift (as in Rom 12:3; 15:15; 1 Cor 3:10 [in the Greek]; 1 Cor 15:10; 2 Cor 1:12; Gal 2:9; Eph 3:7-8). Apostleship is but one of the *charismata*, and 1 Cor 1:4 in context confirms that all the spiritual gifts are divine "graces." Paul says the same thing in Rom 12:6: "Having gifts that differ according to the grace given to us, let us use them" (cf. Eph 4:7). In 1 Pet 4:10, similar vocabulary is used: "As each has received a gift (*charisma*), employ it for one another, as good stewards of God's varied grace." Grace is given to Christians in the form of *charismata*, with which they may edify the Church and thus act as channels of God's goodness and care.

#### E. Grace in Salutations and Benedictions

The importance of God's grace can be seen in passages such as Acts 14:26; 15:40; 20:32, in which believers (in the first two instances, departing missionaries) are commended to God's grace at parting. "Grace" is also used in the salutation and benediction of every letter of the Pauline corpus, 1 and 2 Peter, Revelation, and 1 *Clement*. It is found in the closing words of Hebrews and 2 John, but is not used either to begin or close James, 1 and 3 John, and Jude. Grace is often linked with other words, such as "peace" or "mercy," as in the Pauline "Grace to you and peace from God our Father and the Lord Jesus Christ" (so 2 Cor 1:3), or in 1 Peter 1:2: "May grace and peace be multiplied to you."

The use of "grace" as a greeting probably derived from

the use of the cognate *charain* ("greetings") in Hellenistic epistles (as in Acts 15:23; Jas 1:1). The change from "greetings" to "grace and peace" may have been Paul's own invention (Moffatt 1932: 135-55), although other NT writers also use that convention.

#### F. Grace in the Theology of the Christian Church

The doctrine of grace came to its fullest exposition in the theology of Augustine. He rejected Pelagianism, the contemporary movement which stressed the freedom of the will and the natural human ability to serve God. Augustine countered that the fall of Adam ensures that no individual is able to turn to God, much less obey him. Thus all of salvation must flow from God's grace. Even the decision to receive salvation arises from God's call, in which grace to believe is given. God's grace is prerequisite to any true movement toward God. As a later heterodox reaction to Augustinianism, semi-Pelagianism taught that the beginning of faith and perseverance were to be regarded as the fruits of the human will.

For the late medieval Church, grace was an effluence rather than a divine disposition. Thomas Aquinas could define it as a substance which was infused in people through the sacraments. Infused grace enabled Christians to produce good works, which would lead to God's forgiveness.

The Reformation brought about a revival of Augustinian theology, finding its expression in the slogan *sola gratia*: salvation is of God's gracious inclination toward us from beginning to end, and does not depend on works nor Church nor sacrament. It has its beginning in the gracious election of some to salvation, without regard to merit or spiritual inclination, and leading to the gift of regeneration. Calvin in particular dismissed the medieval view of grace as "magic" (*Institutes* 4.14.14-17).

The Council of Trent rejected the Reformers' understanding of grace. Prevenient grace and free will could lead one to initial faith in Christ and baptism. Through the sacrament, grace would be given to start the process of justification and holy living.

The theology of grace has received much attention in the 20th century, particularly in the theology of Karl Barth (see Berkhouwer 1956).

**GRANARY.** See AGRICULTURE.

**GRANULATION.** See JEWELRY, ANCIENT ISRAELITE.

**GRAPES.** See FLORA.

**GRASS.** See FLORA.

**GRASSHOPPER.** See ZOOLOGY (FAUNA).

**GRATING** [Heb *mikbar*]. A bronze mesh that apparently covered the upper part of the bronze altar of burnt offerings that stood in the courtyard of the Tabernacle (Exod 27:4; 35:16; 38:4, 5, 30; 39:39). This mesh was placed under the ledge of the altar, which seems to have been just beneath the rim. Its four corners were fitted with rings to hold the poles by which the altar could be transported. Despite the information provided by the text, the exact appearance, location, and function of the grating cannot be understood.

CAROL MEYERS

**GRAVEN IMAGE.** "Graven image" normally translates the Hebrew *pesel* or *pāsīl*. Etymologically, both words are related to the verb *pāsāl*, "to hew or carve" (e.g., Exod 34:1; 1 Kgs 5:21 [—Eng 5:18]), and in some instances (e.g., Deut 27:15) *pesel* seems to refer to a carved image in contrast to one made by casting molten metal (*massēkhā, nesek, nāsīk*). In other instances this distinction between the words is not maintained, and Isa 40:19 and 44:10 indicate that a *pesel* could be cast (*nāsak*). Other words for images such as *semel* and *ʿāsāb* probably refer to similar kinds of images.

These images were occasionally made of stone (Hab 2:19) or wood (Isa 40:20; 45:20), and stone statues of deities, sometimes life-size, are known from elsewhere in the ancient Near East. Often they were made of wood carved into the shape of the deity, overlaid with gold and silver, and then fastened to a base (Hab 2:18–19; Isa 30:22; 40:19–20; Jer 10:3–5). Texts from Egypt and Mesopotamia describe similarly made cult statues of deities. Such statues were an important focus of worship in both Egypt and Mesopotamia, and texts like 1 Sam 5:2–5; Deut 7:5, 25; and 2 Sam 5:21 (cf. 1 Chr 14:12) make it clear that they were also used by the Canaanites.

While cult statues were generally life-size, their appearance probably varied considerably depending on the material from which they were made and the resources available for creating the statue. Some, described in Egyptian and Mesopotamian literature, were covered with silver, gold, and precious stones and were spectacularly attired; others probably were made of wood and stone and were much less impressive. Some images may have consisted of little more than a consecrated stone or piece of wood. The real significance of images for those outside Israel lay not in appearance but in function. The life of the god was thought to reside in the statue, and the deity was considered actually present in the image. Other statues, usually smaller in size, were used as votive offerings and for protective and magical purposes.

The use of such images was strictly forbidden by biblical law. However, the context in which the prohibition occurs

in the Ten Commandments (Exod 20:2–6; Deut 5:6–10) suggests that its primary focus was to forbid images used in worship rather than to prohibit artistic expression. Figures of cherubim (Exod 26:1, 31; 1 Kgs 6:23–28; 2 Chr 3:7) and other artistic representations (1 Kgs 7:25, 29, 36; Jer 52:20) were used in the tabernacle and the temple. For further discussion and bibliography, see IDOL, IDOLATRY.

EDWARD M. CURTIS

**GREAT ASSEMBLY.** The Great Assembly (Heb *kēneset haggēdōlā*, often mistranslated as the Great Synagogue) is first mentioned in *m. ʿAbot* 1:1 (written about 250 C.E.), where it is placed in the chain of tradents who handed down the oral torah from Moses to the post-70 rabbis. Its position in this chain between the "prophets" and the five "pairs" (see ZUGOTH) indicates that it belongs to the postexilic period, sometime before the collapse of the Maccabean dynasty. In fact, it is the only institution *ʿAbot* mentions that could have existed during the first 200 or 300 years after the return to Jerusalem.

Rabbinic literature depicts the Great Assembly as an important and authoritative body that legislated significant changes for Judaism. Later rabbis held that it established the festival of Purim (*b. Meg.* 2a) and wrote the books of Ezekiel, Esther, Daniel, and the twelve prophets (*b. B. Bat.* 15a). The rabbis also held that the Assembly played a major role in creating the liturgy used in the rabbinic period, attributing to them the Eighteen Benedictions (*b. Meg.* 17b), *Kiddush* and *Habdalah* (*b. Ber.* 33a) as well as other prayers and benedictions.

Only one member of the Great Assembly is ever mentioned by name: Simeon the Just. According to *ʿAbot*, he was "one of the last survivors of the great assembly." Scholars have attempted to identify him with Simeon I (310–291 B.C.E.), Simeon II (219–199 B.C.E.) and Simeon the Maccabee. While the case for Simeon II appears strongest, none of the identifications is by any means certain.

In fact, the historicity and nature of the Great Assembly are a matter of scholarly debate—one which has engendered little agreement, even on elementary questions. The most significant information, often ignored, is the lack of contemporary evidence for this institution; the first mention of the Great Assembly comes some 400 to 600 years after it supposedly existed and in documents not known for their interest in history. Furthermore, *ʿAbot* and the rest of rabbinic literature depict the Assembly as a permanent institution, but several passages (e.g., *y. Ber.* 1:6; *y. Ber.* 7:3; *Midr. Ps.* 19) reveal that the rabbis connect it to the one-time general meeting depicted in Neh 8–10. The concept of the Great Assembly thus appeared first among the rabbis of the 1st or 2d century C.E., and they or their successors tied it to the Nehemiah story. It is unlikely that the Great Assembly ever was a historical institution as portrayed in rabbinic literature.

PAUL V. M. FLESHER

**GREAT BIBLE, THE.** Henry VIII, seeking a Bible free from undesirable interpretations, permitted Thomas Cromwell, his Vicar-General, to proceed with the preparation of what came to be called the Great Bible. Cromwell, securing permission from the King of France, appointed Richard Grafton and Eduard Whitechurch to do the printing in Paris because of the superior paper and workmanship available there. Though Miles Coverdale's translation of the Bible had been out only two years, he was persuaded to prepare the new text. Coverdale and Grafton wrote Cromwell from Paris in June of 1538 of their progress.

Coverdale used Matthew's Bible (1537), Sebastian Münster's Latin text of the Old Testament (1534–35), Erasmus' Latin Bible (1516, 1519, 1522, 1517), and perhaps the Complutensian Polyglot (1521). Because of the patronage Cromwell gave, the Bible is sometimes called "Cromwell's Bible."

A printing of 2,000 copies was planned, but relations with France worsened so that by December of 1538 Coverdale wrote Cromwell of the political danger. The Inquisition arrested the printer, Francis Regnault, and seized all the stock; however, the correctors escaped with some sheets. Four vats of the sheets, escaping from the fire, were sold to a haberdasher, and after repurchase by the British reached England safely. After extended negotiations, the press, type, and printers were brought to England, and the Bible was finally finished in 1539 (Herbert 1968: No 46).

Named from its size of fifteen inches in height, the Great Bible had a woodcut title page, formerly erroneously ascribed to Holbein, which shows Henry VIII with Cranmer and Cromwell distributing Bibles to the people, who cry "Vivat rex!" and "God save the King!" There are numerous woodcut borders and initials scattered through the book.

An edition in 1540 had a preface by Cranmer, Archbishop of Canterbury, which is why it is known as "Cranmer's Bible." This preface was frequently also printed in later Bibles of other types. The title page of 1540 carried the words "This is the Bible appointed to be read in Churches." By the end of 1541 there had been a total of seven editions with an estimated 20,000 copies. These editions were the subject of a study by Francis Fry in 1865.

The text used the paragraphs of Stephen Langton, had no verses, but used A, B, and C down the margins to mark sections. Words derived from the Latin Bible but not represented in the original languages were printed in small type. The order of books in the New Testament is that of Erasmus (later used in the KJV), not that of Luther. The Lord's Prayer read "Forgive us our dettes . . ." rather than "trespasses," which Tyndale had used.

Coverdale had planned a set of annotations for the end of the Bible, and he inserted a pointing hand at appropriate places in the text, but the notes were never approved and never appeared.

The royal Injunctions of 1538 had ordered that by a certain date every parish was to have a Bible of "the largest volume in English" to be set up to be read. The Great Bible sold for ten shillings unbound and twelve shillings bound and clasped. Churchwardens' accounts of the period enter the cost for "half a Bible," which means the parish paid half and the clergy half. Because the book was

often chained to the reading stand, as books of the period in libraries were often chained to prevent theft, it has been called "the chained Bible." Six copies were set up in St. Paul's in London, and crowds gathered to hear the reading, making it necessary for the Bishop of London to forbid reading during the sermon.

An effort in 1542 to revise the Great Bible to make it more like the Latin failed, for the bishops to whom parts were allotted had no real desire for the planned revision. No Bibles were printed in England during Henry's reign after 1541. In 1543 Bibles with the name of Tyndale were proscribed, and in 1546 Coverdale's name was included in the prohibition. After Henry's death, in the six and a half years of Edward VI's reign (1547–1553), there were twenty-four printings of the NT and sixteen of the entire Bible of various sorts. Under Mary (1553–1558), no Bibles were published in England. Rogers and Cranmer, who had played a role in Bible translation, were martyred (1555, 1556). With the accession of Elizabeth (1558), Bibles were printed again, with the Great Bible printed in 1561 (No. 110), 1562 (No. 117), 1566 (Nos. 119, 120), and 1668 (No. 122).

The Great Bible was used as the basis for the revision done by Matthew Parker, which came to be known as the Bishops' Bible. The Bishops' Bible immediately displaced the Great Bible, of which the last printing was in 1569; however, the Great Bible Psalms had become a lasting part of the Book of Common Prayer, and they were inserted in Bishops' Bibles after 1572. Butterworth (1941: 231) estimated that thirteen percent of the wording of the King James version of the Bible is due to Coverdale's work, including the Great Bible.

The text of the NT was reprinted in Bagster's *English Hexapla* in 1841 and in Weigle's *The New Testament Octapla* in 1962. Its Psalms are in the *Hexaplar Psalter* of 1911, and its Genesis is in Weigle's *Genesis Octapla* in 1965.

JACK P. LEWIS

**GREAT COMMISSION, THE.** The pericope specifically known as "the Great Commission" is Matt 28:18–20, but the post-Resurrection narratives in the Gospels and Acts record other directives (Mark 16:15; Luke 24:47–49; John 20:21–23; Acts 1:8) as well that the risen Lord gave His church (Matt 16:18) to obey "to the close of the age" (Matt 28:20). Each account makes distinctive, but complementary, contributions to the Commission that has fueled the spread of Christianity to the present time (Peters 1972: 174–98; Warren 1976).

Of the various passages, Mark 16:15, located in the longer ending of the second gospel, is likely not original.

However, this section of Mark was quoted by Irenaeus and Hippolytus in the latter 2d and early 3d centuries A.D. Also, the wording "Go into all the world and preach the gospel to the whole creation" (Mark 16:15) is strikingly similar to the Pauline statements that "the gospel . . . has been preached to every creature under heaven" (Col 1:23) and "in the whole world" (Col 1:6). Thus, a mandate for universal proclamation of the gospel message is understood in the NT and early church history, completely apart from a decision on Mark 16:15.

The Commission statement in John's gospel reads, "As the Father has sent me, even so I send you" (20:21). The emphasis is on continuation of Jesus' earthly ministry through the disciples (vv 19, 20). The Son came to fulfill a redemptive mission from the Father (3:16). Now, following the Johannine account of the death and burial of Jesus (19:17-42) and the glorious resurrection (20:1-9), the offer of forgiveness of sins (v 23) is sent forth (v 21) in the power of the Holy Spirit (v 22).

The version of Christ's commission in Luke also mentions forgiveness and more precisely describes the geographical "sending": "Repentance and forgiveness of sins will be preached in his name to all nations, beginning at Jerusalem" (24:47). The combining of repentance and forgiveness looks ahead to Peter's sermon at Pentecost (Acts 2:38). The stated scope of Paul's apostolic mission is "all nations" (Rom 1:5; 16:26), and he declares that he has proclaimed the gospel "from Jerusalem all the way around to Illyricum" (Rom 15:19). Thus, there seems to be a consciousness of the Lukan Commission at an early stage.

Luke's message is repeated in Acts 1:8, which picks up the themes of being "witnesses" from Luke 24:48 and of "power" from 24:49. It also states the same geographic starting point as seen in Luke 24:47 (i.e., Jerusalem). In well-known words which generally prefigure the development of Acts, Jesus says, "You will receive power when the Holy Spirit has come upon you; and you will be my witnesses in Jerusalem, and in all Judea and Samaria, and to the end of the earth" (Acts 1:8). These words come immediately before the Ascension (v 9), thus accentuating their implications.

The specific "Great Commission" is in Matt 28:18-20. In the light of the resurrection (28:1-7), the triumphant Lord asserts universal authority (v 18) and commands a universal age-long strategy (vv 19-20; O'Brien 1978: 256-67). While the background, structure, function, and theology of this section has recently been widely debated (Brooks 1981: 2-18; Hubbard 1974; Kingsbury 1974: 573-84; Friedrich 1983: 137-83), the general thrust is clear. In his public ministry Jesus had called "disciples" (Gk *mathētai*; TDNT 4: 390-461; Wilkins 1988) from the masses as He went about proclaiming the gospel of the kingdom and teaching (Matt 4:17-5:2). Now He directs His closest disciples (Matt 28:16) to "Go . . . and make disciples (*mathēteuō*) of all nations" (v 19). This represents a shift from Jesus' focus on Israel seen in Matt 10:5-6 and 15:24 (Brown 1980: 193-221).

While the worldwide goal of the Great Commission is equivalent to Luke 24:47 and Acts 1:8, the sequential procedure is unique to the Matthean statement: "going" (Gk *porēuthentes*) for the purpose of evangelism and making disciples (Matt 28:19); baptizing those who respond to the

gospel (v 19); and teaching those new disciples what Christ had commanded (v 20; Luter 1980: 269-70). Further, in words recalling the "Emmanuel" promise in Matt 1:23, Christ promises His ongoing presence in the Great Commission process (v 20), which will only be fulfilled at the time of the Parousia (Matt 24:14).

The beginning of the outworking of the Great Commission is seen in the activities of the generation that received it. Peter's procedure at Pentecost was evangelistic preaching, then baptism and teaching (Acts 2:41-42). The approach of Paul seen in Acts 14:21-23 is evangelism in order to "make disciples" (the only use of *mathēteuō* outside Matthew), then instructing the disciples (*mathētai*) and organizing them into churches. Such examples imply that the apostles understood that Christ's church (Matt 16:18) was to be built up by making disciples of all nations throughout the age (Matt 28:19-20).

**GREAT POWER, CONCEPT OF.** See CONCEPT OF GREAT POWER (NHC VI,4).

**GREAT SEA (PLACE)** [Heb *hayyām haggādōl*]. A geographical designation for the sea located W of the Promised Land (Num 34:6-7; Josh 1:4; 9:1; 15:47; 23:4; Ezek 47:15; 48:20). The Egyptians referred to it as *W3d-wr*, the "Great Green," a term connoting a sea in general, but particularly the sea known today as the Mediterranean. Assyrian kings, whose armies reached the sea, called it *tāmtu rabītu*, the "Great Sea." The Aramaic translation, the LXX, and the Vulgate followed suit. The *Genesis Apocryphon*, however, added a modifier. When delineating the W boundary of the land promised to Abraham, it called the sea to the west, *ym' rb' dn dy mlh'*, the "Great Sea of Salt" (1QapGen 21). This sea is designated as "great" to distinguish it from the inland "Sea of Salt," a characterization found later in Jewish sources of the Middle Ages (Maimonides, Arabic commentary on *m. Kelim* 15:1).

The Targum recognizes the existence of two "Great Seas," one in the W and one in the S or SE (*Tg. Ket.* Ps 72:8). Since there was more than one great sea known to the ancients, a further distinction was made. The chronicles of the Assyrian kings show that the royal scribes described the Mediterranean as *tam-tù rabî-tu ša šul-mu dšam-ši* ("the Great Sea which is in the west"), differentiating it from the *tam-tù rabî-tu ša na-paḥ dšam-ši* ("the Great Sea which is in the East"). Similarly, when drawing territorial boundaries of the biblical land, the Hebrews used the term *hayyām haggādōl* in conjunction with another word or phrase which signified the W, such as *hayyām haggādōl mēbōḥ haššāmeš*, "the Great Sea where the sun sets" (Jos 1:4; 23:4), or *yām*, literally, "sea," but figuratively, in most instances, "west" (Num 34:6; cf. Ps 107:3 where *yām* signifies "south").

The ancient Near Eastern people gave designations to parts of the Great Sea, especially to its Syro-Palestinian shores. Although not mentioned in Scriptures, Egyptian sources employ the term *p3ywm 3 n H3rw*, "the Great Sea of Huru" (Gardiner 1932: 61–76), which refers to the Great Sea of Huru-land (= Syria-Palestine). The name is drawn from an ethnic group, Hurrians, which inhabited Syro-Palestine long before the appearance of the Israelite tribes (Gen 14:6; Deut 2:12). The biblical text preserves another ethnological term, "Sea of the Philistines" (Exod 23:31), located along the Palestinian shoreline, most probably in the vicinity of Philistine settlements. In the same vein, the Sea of Joppa is the part of the Great Sea named after the port city prominent from the pre-biblical era through the post-biblical period. Ancient Israel regarded this port city as the main outlet to the Great Sea for goods as well as for travelers even before it came under direct Jewish control in 143 B.C.E. (1 Chr 2:15; Ezra 3:7; Jonah 1:3; see also *Let. Aris.* 115; Strab. *Geo* 16 2.28).

Designations of parts of the Great Sea by names of independent seaports or ethnic groups raised the question of the jurisdiction of the city or the people over the territorial waters adjacent to the land. While not discussed in Scriptures, the issue concerned the postbiblical Jewish sages. They argued that the W border, for the purposes of Jewish law, did not end with the seacoast of the Great Sea but incorporated that part of it that extended due W between the S and N borders of Israel. The minimalists' approach included under Jewish jurisdiction only segments of the east Mediterranean along the coast. The maximalists' view encompassed a major part of the Great Sea, placing not only the sea but also the islands under the jurisdiction of the Promised Land (*b. Giṭ* 8a), a theory which runs parallel to the Roman conception of the Mediterranean Sea as *mare nostrum*.

The Israelites, contrary to their stereotype of landlubbers, were not only farmers but were also participants in maritime enterprises taking place in the Great Sea to the W and the Great Sea to the SE.

A major preoccupation of the conquering Israelites was their attempt to control the seacoast which stretched from Gaza in the S to Sidon in the N. Coalitions of powerful western kings along *hōp hayyām haggādōl* (Josh 9:1), an *hapax legomenon* referring to the "shore of the Great Sea," joined forces to prevent the advancing tribes of Israel from dominating the coastal strip. The alliance was defeated

and the Israelites were able to occupy the coast, albeit only sections of it (Josh 11:8; Boling *Joshua* AB, 308; Judg 1:27, 30–32; Boling *Judges* AB, 60). The efforts to control the seacoast were continued by the conquering tribes who achieved dominance over the central part of it, except for the famous harbor town of Dor (Josh 17:11; Boling *Joshua* AB, 306; Judg 1:27).

The possession of large sections of the coastal region permitted participation in marine trade and provided direct access to marts in foreign lands. According to biblical evidence, no less than three tribes—Zebulun, Dan, and Asher—were involved in maritime activities (Gen 49:13; Judg 5:17; see also Yadin 1965: 42–55).

Recent maritime archaeological surveys reveal numerous harbors and havens along the ancient Mediterranean coast of Israel, suggesting considerable sea trade (Linder and Leenhardt 1964: 47–51; Raban 1984: 241–53). Later, when the Philistines gained control over the S coast, the Hebrews found another sea outlet. King Solomon exploited the geographical position of Ancient Israel as a land bridge between the two Great Seas and entered into a commercial partnership with the Phoenicians, which overcame geographical barriers for both. For the Hebrews, it opened up the sea-lanes on the Mediterranean, and for the Phoenicians, it allowed access to the lucrative sea trade from the east (1 Sam 5:11; 1 Kgs 5:15–26; 9:11–14; 26–28; 10:11; 22; 2 Chr 2:2–15; 5:17–18; 9:21; see also Menander apud *AgAp* 1.120; 126).

When the monarchy was divided and the tribes could no longer regain possession of the coastal strip, the maritime ventures on the Great Sea were severely curtailed (Gordon 1963: 31). There was, however, a full-blown revival of maritime activity during the Maccabean period (See MEDITERRANEAN SEA). As an integral component of the Mediterranean society (Gordon 1963: 20–22), the Hebrews always strove to achieve an outlet to the Great Sea. Whenever the goal was realized, they set sail and engaged in all aspects of maritime activities.

### A. Geographical Location

The major part of the country of Greece is located between 20 and 25 degrees east longitude and between 36 and 40 degrees north latitude. However, there are more than 2,000 Greek islands, 151 of which are inhabited, which extend to the coast of Turkey, where colonists of ancient Greece established themselves in Aeolia and Ionia.

### B. Terminology

The name Greece (*Hellas*) was brought into the main part of the country by an invading tribe of *Hellēnes*. According to Aristotle, they came from Epirus in NW Greece; more specifically, the area around Dodona, which they called *Hellas*. The name was later applied to the entire country. Greece is mentioned only once by name in the New Testament (Acts 20:2), where it refers only to Achaia (S Greece) as opposed to Macedonia in the N (v 3). Most modern translations of the Hebrew Bible render the term JAVAN as Greece (e.g., Dan 8:21; 10:20; 11:2; Zech 9:13). Javan is mentioned among the distant (gentile) nations in Isa 66:19; Ezek 27:13). The name was apparently derived from Javan, the fourth son of Noah's son Japheth (Gen 10:2, 4; 1 Chr 1:5, 7). Greeks are referred to in Joel 3:6.

In NT times, subsequent to the extensive Hellenization of the ancient world by Alexander the Great, the term Greek became somewhat of a cultural designation, referring to anyone who accepted Greek culture and spoke the language. The Jews who came to worship at the Passover feast and asked to see Jesus are called "Greeks" (*hellēnes*) by John, meaning they were from the Diaspora (John 12:20). Luke calls them "Hellenists" (*hellēnistōn*, Acts 6:1). Ancient Greek manuscripts sometimes confuse or equate the two terms (Acts 9:29). Luke probably reserves the term "Greeks" for non-Jews who worship the one true God (Acts 14:1; 16:1, 3; 17:4, 12; 19:17), also calling them Godfearers (13:16, 26; 16:14; 18:7), and designates as "Gentiles" those who were polytheistic pagans (4:25, 27; 9:15; 18:6; etc.). Jews in Jerusalem felt that anyone who had not become a proselyte was a gentile, even if he was a God-fearer like Cornelius (Acts 11:1, 18).

### C. Early Civilization (before 2000 B.C.)

There are no written documents concerning Greece prior to the *Iliad* of Homer, around 800 B.C. We rely, therefore, largely on archaeological discovery and philology for information about the prehistoric period. From a study of the language we learn that a non-Indo-European people lived in Greece before the arrival of Indo-European Greek-speaking tribes. The former seem to have come from Armenia and the latter from south Russia.

Agricultural and pastoral seafaring nomads settled in Crete, Cyprus, and the Cyclades early in the Neolithic Period, around the close of the 4th millennium B.C. In the

Early Bronze Period (ca. 2600–2000 B.C. for Crete), migrants from Asia Minor settled in Crete and the Cyclades. Skeletons show that they were long-headed and narrow-faced people, rather short in stature; the men averaged five feet and two inches and the women four feet and eleven inches. These are regarded as the first Minoans, who settled in Crete and were later named after Minos, a famous king of Crete.

Extensive trade developed between Cyprus and Babylonia, testified to by the discovery of many Babylonian cylinder seals in Early Bronze settlements in Cyprus. Trade also flourished between the Cyclades and Asia Minor. Undoubtedly prompted by this trade, the pictographic form of writing was replaced around 1600 by a linear script, called Linear A, which has never been deciphered. It was widely used throughout Crete. It was written from right to left and probably did not represent the Greek language. It may have belonged to the period prior to the Indo-European settlements.

### D. Migrations and Language (ca. 2600–1000 B.C.)

The first Greek-speaking people in the southern Balkan Peninsula arrived in Macedonia, Thessaly, and Epirus sometime after 2600 B.C. and developed, probably due to the extreme mountainous nature of the country, their several different dialects. About 1900 B.C., people who spoke Ionic, the oldest dialect of Greek, moved into Boeotia, Corinthia, and Argolis.

About 1600 B.C., the largest migration of Greek-speaking people entered Greece, speaking the Aeolian groups of dialects—the Aeolic branch in E Greece and the Arcadian branch in the Peloponnese. The development of the epic Greek language began at that time, when these two branches were the main dialects of the Greek world. Those who spoke the Ionic dialect were driven southward into Attica by the Aeolic-speaking branch. The Dorians brought their dialect into S Greece, when they overthrew the Mycenaean around 1200. About 1000 B.C., Ionians migrated to W Asia Minor and settled along its S coast. Homer and Hesiod wrote primarily in Ionic. The people of Athens were part of this Ionic-speaking tribe in Attica, and by the Classical Period, on the mainland, Ionic was spoken in Attica alone. Aeolic-speaking Greeks also migrated to the W coast of Asia Minor, settling in the area immediately N of Ionia. The youngest stratum of dialect is Attic, which underlay the amalgamated Koine (common) Greek in which the New Testament was written.

### E. Minoan Civilization (ca. 2000–1400 B.C.)

The Minoan civilization reached its zenith from 1600 to 1400 B.C. Excavated settlements show a highly developed society with two-story houses which contained bathrooms, lavatories, halls, and interior staircases. Frescoes and statues show the men wearing a codpiece, a tight belt, and occasionally a short kilt. Women wore a skirt, a tight belt, and sometimes a low corset, leaving the breasts exposed. Both sexes were slender and wore their hair long. The men were beardless. Both sexes participated in public functions, especially sports such as the popular somersaulting over the backs of charging longhorn bulls (bull-leaping). Dancing girls were frequently portrayed on the walls of the palace at Knossos in N Crete, excavated by Sir

Arthur Evans in A.D. 1900. The chief deity of this devoutly religious civilization was female. The Mother Goddess of Anatolia may be the source of this deity, but this is uncertain.

The major palaces of Crete were destroyed around 1400 B.C. when the Minoan civilization came to an end. The causes are not known, but several have been suggested as possible: (1) the mid-15th-century volcanic explosion that destroyed Thera (Santorini), which some identify with ancient Atlantis; (2) civil war on Crete; (3) pirate activity of the kind that later destroyed Troy and Mycenae and attacked Egypt; (4) an invasion of the Mycenaeans.

#### F. Mycenaean Civilization (ca. 1450–1200 B.C.)

Around 1450 B.C., Mycenaean expressions permeated the palace at Knossos. Michael Ventris deciphered the script, Linear B, recognizing the language as a primitive form of Greek (Chadwick 1958). It seems to have developed at Crete for commercial reasons in order to communicate in the Mycenaean language (which previously had existed only orally), having been brought to Crete from the mainland of Greece. Evidence indicates that the Mycenaeans never used Linear B for anything except accounts, inventories, and the like. No examples of continuous prose exist, and what is known of the system makes it unlikely that it was suitable for such communication. The script continued to be used on the mainland, after the destruction of Crete, until about 1200 B.C.

The mainland had been settled about the same time as the islands, around 3000 B.C., in the regions of Thessaly, Phocis, and Boeotia. These settlers came from the hinterland of Asia Minor as well as from the N. The S portion of Greece entered the Bronze Age (ca. 2600 to 1900 B.C. for the mainland) sooner than did the N. The Middle Bronze Age (ca. 1900 to 1600 B.C.) saw the invasion of central and S Greece, including the Peloponnese, by Greek-speaking people from the N. This culture, which entered Greece with violent destruction, developed significantly and from 1600 to 1450 prevailed in Boeotia and Argolis. In the latter district, the city of Mycenae was first excavated in 1874 by Heinrich Schliemann, who found the first evidence of this culture, and it was therefore dubbed Mycenaean.

Excavations by Sir Arthur Evans and others have shown that the Mycenaeans and the Minoans were two distinct cultures. The Mycenaeans, unlike the Minoans, were a taller, warlike people, who buried their dead in lavish shaft graves and used gold in abundance. However, the Mycenaeans were influenced by Minoan culture from Crete while retaining their own. This is seen especially in their pottery, jewelry, religious symbolism, and association with a cult of the Mother Goddess. Excavations by Schliemann at Mycenae and Troy have given historical credibility to the geographical and historical background of Homer's *Iliad*.

#### G. The Dark Age (ca. 1200–800 B.C.)

Mycenaean civilization was destroyed about 1200 B.C. in a way not yet known. It may have been an invasion of Dorians from the N. Civilization devolved into barbarism, and all cultural advance stopped—seal engraving, fresco painting, faience making, ivory carving, working with stone, etc. No documents in any language have been found

in Greece during this period; Linear B ceased to exist. It was a time of general disruption in the Mediterranean. Troy fell to a Mycenaean coalition which itself was almost immediately destroyed, perhaps by Dorians. Sea Peoples (probably Philistines) attempted an invasion of Egypt. The Hittites were conquered by the Phrygians. Lydia was overrun and Cyprus plundered. Tarsus (in Asia Minor), Ugarit (in Syria), and Sidon (in Lebanon) were burned.

#### H. The Archaic Age (ca. 800–500 B.C.)

During this period significant changes took place in Greece. Sometime in the early part of the period the Phoenician alphabet was adopted, and a complete system of vowels developed. Writing was virtually rediscovered, making possible the production of Greek literature. The topography of the land, characterized by many isolated valleys, which contributed to the perpetuation of various dialects, also fostered the rise of the city-state (the *polis*). These independent cities were never able to be absorbed into a single political entity until the time of Philip of Macedon. For its citizens, the city was the state, and every member of the *polis* was also a member by birth of both a tribe (the larger unit) and a brotherhood (primarily a religious association which observed festivals).

During the early part of this period, the Olympic Games were founded. Subsequent Greek calendars were based on the Olympiads, the four-year intervals between games. The games provided one of the few times when Greeks transcended local loyalties and interests and came together to honor Zeus. Only men participated in the games, which also banned women spectators in the early years.

Trade between Greece and the east increased during these centuries, while colonization of S Italy took place. Greek settlements were also made in the N Aegean, on the shores of the Black Sea, and along the N coast of Africa. Aristocratic landowners maintained control of the society and conducted warfare during the early years of the period. Sometime after the mid-7th century, the aristocratic type of rule was replaced by that of tyrants (from both the aristocracy and the people), who took control of city-states by the use of bands of armed followers. Some of these were good for the people, but most were not. The latter are responsible for the negative connotation of the word in subsequent history.

The first temples built of stone in Greece date to around the end of the 7th century. In the following century, they were built throughout the Mediterranean world. These temples were not places of worship but residences of the gods, and by the 6th century they ceased to satisfy the religious needs of the worshipers, who created a new form of expression, the Mystery Religions, or secret cults, which centered on Dionysus, Demeter, and Orpheus. These maintained their popularity until well after the NT period.

The Archaic Age witnessed the creation of lyric poetry, which probed the depths of human emotions, but almost no Greek music has survived. Scientific and philosophical speculation also developed during this time. Military defense was enhanced by the construction of substantial city walls, while harbors and public buildings of various kinds were built to intensify commercial activity.

Although Greece had been divided into many city-states in the 6th century, the history of the 5th century was

predominantly the history of two of these—Athens and Sparta. This is partially because these two cities were the two major forces in preventing Persian control of Greece. Nevertheless, each represented a completely different approach to Greek culture at the time.

Sparta consisted of a group of five neighboring unwallled villages, rather than a walled city. It evidently had been settled by Dorians, who took the area in Mycenaean times. A totalitarian regime governed Sparta, emphasizing military preparedness and resisting any kind of social change. Sparta's laws forbade foreign travel by its citizens, discouraged foreign visitors, and prohibited coined money. This eliminated foreign trade, of course. A system of communal living developed, unlike anything known elsewhere in Greece. Although they were expected to marry by age 30, the sexes continued to live in segregated areas, the young men sleeping in military club dormitories for years later. Clandestine evening rendezvous with wives were routine, of course. Spartan women became more socially independent in such a society, developing a reputation for sexual aggressiveness and lesbianism. Children belonged to the state, and if not perfect at birth were "exposed" (thrown out to die). At age 12 a boy was taken into military service and left home forever to live with other young men. Girls also received some physical education. Homosexuality was common in such segregated circumstances.

This system gave Sparta the best army in Greece from about 550 to 350 B.C., an army created to defend and preserve its own way of life, not to make military conquests. The cost of such security was the surrender of individualism to the interests of the state, somewhat along the lines of modern communism.

Athens, by contrast, developed a system of laws in the 6th century that modernized the old system of the city. Solon, himself an aristocrat who was chosen by the city as a virtual benevolent tyrant to renovate its laws, abrogated the old Draconian code, which had been produced by the aristocracy. In its place he made sweeping reforms and instituted what became the basis of a democracy. Changes in the judicial system were accompanied by the transference of more power to representatives of the people.

At the time that democracy was emerging in Greece, a challenge to its existence was developing further east. By 550 B.C. the Persian king Cyrus had overthrown the king of Media, whose brother-in-law Croesus, king of Lydia, then marched against Cyrus but was defeated in 546 B.C. Ionia and Aeolia, the Greek colonies in W Asia Minor, had backed the loser and were placed under the rule of tyrants, who were answerable to the Persian satrap at Sardis. After the death of Cyrus, his son Cambyses conquered Egypt, and the Greeks found themselves bordering the greatest empire the world had ever known.

Ionia revolted in 499 B.C., and the war that followed was recorded by Herodotus, a native of Ionia, who wrote his history of the Persian Wars in the Ionic dialect during the 5th century. Ionia failed, and its greatest city, Miletus, the pride of the Greek world, was evacuated; its inhabitants were resettled in the east. Darius had taken the Persian throne in 522 B.C. and now decided to take the mainland of Greece. He sent an expedition there in 492, which failed when the Persian fleet was destroyed in a storm off Mt. Athos. Two years later, in 490, he sent another force

which landed at Marathon, but it was also unsuccessful. More than 6,000 Persians were killed at Marathon, compared to only 192 Athenians. The Persians withdrew by sea and sailed against Athens. However, the Athenian troops made a marathon march to Athens, arriving there in twenty-six days, before the Persians could prepare for a battle. The Persians then left without attempting a landing.

The Athenians commissioned Themistocles to build a navy, anticipating another Persian attack eventually. The fleet numbered 200 ships and was ready when Xerxes, the son of Darius, invaded Greece in 480 B.C. to avenge the loss at Marathon. The force, which Herodotus says numbered 1,700,000, was too large to move by sea, and so it marched from Sardis in Asia Minor, across the Dardanelles on a pontoon bridge, and then down the coast of Greece, while the navy sailed just off shore.

Leonidas, a Spartan king who was assisting Athens, met the Persians at a narrow pass on the coast called Thermopylae (about 50 yards wide at the time, though wider now). Seeing the hopelessness of the situation, Leonidas sent the largest part of his force back to Athens, and with the remainder of his troops fought a delaying battle to allow Athens time to prepare for the Persian invasion. A treacherous local Greek guide took a Persian contingent through the mountains, allowing them to outflank Leonidas and his men, all of whom were killed. However, the Persian fleet lost 400 ships in a gale at Artemision off the N end of Euboea and 200 more around the S end of the island.

Meanwhile, the citizens of Athens had been given enough time to evacuate the city and move to the island of Salamis, where they would rely on the navy of Themistocles to defend them. The Greek navy, consisting of about 300 ships, destroyed much of the remaining Persian fleet in the straits of Salamis between the island and the mainland. After sacking Athens, Xerxes returned to Sardis and left a large force to finish conquering the mainland. However, the Spartans met them with a force of 38,000 hoplite soldiers at Plataea in SW Boeotia and defeated them. The year was 479 B.C. The Greek fleet crossed the Aegean sea, caught what remained of the Persian fleet ashore in Mycale, between Miletus and Ephesus, and burned it.

### I. The Classical Period (ca. 500–338 B.C.)

Although Sparta had been a trusted ally of Athens during the Persian Wars, rivalry soon developed between them, eventually producing a conflict that lasted from 460 to 404 B.C.

In 478–477 B.C. in addition to maintaining the alliance she had with Sparta, Athens proceeded to create another alliance with all her allies around the perimeter of the Aegean, and functioned as the unquestioned leader of this new Delian League, which met on the sacred island of Delos. A treasury to fund the league was established on the island in the temple of Apollo and Artemis. Although Sparta, which never liked outside involvement, was happy for Athens to have allies who would fight with her, and thus free Sparta from the task, she eventually came to resent the encroaching control of Athens over the entire Delian League. Sparta was gradually losing her position as leader of the city-states, while Athens was gradually enhancing her position.

The tension peaked when Sparta called upon Athens to help her with an internal crisis, a revolt of her serfs, who were called helots. Athenian forces did so poorly that the Spartans contemptuously dismissed them, preferring to fight without their weak assistance. Athens thereupon broke her alliance with Sparta and made one about 464 B.C. with Sparta's enemy Argos, which lay between Athens and Sparta.

A major factor in the gradual transformation of leadership from Sparta to Athens was the evolution of the methodology of warfare in Greece. Sparta's unique and well-disciplined army had made her the supreme power in Greece for a long time. However, after the defeat of the Persians by the navy of Athens, it became increasingly clear to everyone that Greece's future lay in its navy. Furthermore, Athens was much more involved in naval matters than Sparta because of its leadership of the Delian League, which involved the Aegean islands and the coast of Asia Minor. In this way, Athens inevitably assumed the leadership once held by Sparta.

In addition to these factors, there was also the rise of democracy in Athens, made possible by economic and political conditions that did not and could not exist in Sparta's militaristic configuration. Pericles, a dedicated Athenian aristocrat who hungered for democracy, eventually persuaded the leaders of Athens in 462-461 B.C. to pass a series of laws that eliminated the last remnants of the old aristocratic constitution and instated full democracy.

According to Thucydides, the Athenians were exacting and harsh, eventually losing their popularity as the leaders of the Delian League but maintaining their control by force. Thus, the Delian League became an Athenian empire. After minor conflicts with Corinth and Aegina, Athens built the "Long Walls" between herself and the newly constructed port at Piraeus. She also supported an Egyptian revolt against Persia, which ended in disaster for the Greek fleet, which was completely destroyed in 454. Athens now shifted her policy from an intensive involvement with the League to preoccupation with mainland defense. The League's treasury was moved from Delos to the Acropolis in Athens for safety.

By 449 B.C., Athens and Persia realized that further conflict was unprofitable for both and reached a compromise. Athens abandoned Cyprus, and Ionia became a demilitarized zone. Due to the inability of Athens to defend her interests in the Aegean, her allies lost confidence in her leadership and revolted, provoked by the decision of Pericles to use League money to rebuild the temples in Athens which Xerxes had burned. In 450 B.C., Spartan commanders brought a large Peloponnesian army to Eleusis on the W outskirts of Athens, but they were bribed by Pericles with money from the League treasury and took the army home. Athens and Sparta made a thirty-year nonaggression pact in 445 B.C., agreeing not to interfere with each other's allies, and Athens moved toward even greater exclusiveness, having already passed a law requiring Athenian parentage on both sides for citizenship.

It was in the years after the Persian Wars that Greek culture matured into what is now called Classical Greece. During these years, Pericles was the undisputed majority leader of the Assembly in Athens, which was the governing

body of the city, but he was not a head of state. Democracy was at work here. The Council of the Five Hundred, which advised the Assembly, was composed of fifty men from each of the ten tribes, and its members were selected annually by the casting of lots. Lobbyists arose among the business classes to see that their interests were not overshadowed by the wealthy. They were called demagogues (i.e., "leaders of the people") and were the first professional politicians. They were, of course, not liked by the gentry, but were an essential part of the working democracy. Any person, regardless of class, could speak before the Assembly.

Even though Athens and Sparta had made a thirty-year peace pact, there was constant anxiety between them because of the desire of Sparta to remain culturally introverted and her fear that the extroverted Athens would eventually stir up Sparta's allies against her. War between them was inevitable, according to Thucydides, because of the "growth of Athenian power and the fear which this caused in Sparta." Within a decade the Peloponnesian War (434-404 B.C.) broke out. Sparta prevailed in the war against Athens, at the conclusion of which Athens was forced to surrender and Sparta tore down the "Long Walls" of Athens as well as the fortifications of her harbor city, Piraeus. The Athenian empire was dissolved, and Athens was forced to become an ally of Sparta.

The Classical Period was a time of the extraordinary burgeoning of the Greek genius, the blossoming of the human spirit. This era saw the work of Herodotus, who wrote about the war between Greece and Persia in such an analytical way as to become the "Father of History" and probably of cultural anthropology as well. He created the discipline of history by not only investigating and recording what happened but also attempting to determine why. During this time, Thucydides penned his account of the Peloponnesian War, one of the greatest histories ever written, though not in the modern sense of the term. His analysis of events carried him into a philosophical quest for underlying realities and universal principles that transcend modern history writing. Xenophon also wrote, through the eyes of a farmer and soldier, about the world as he saw it.

The Classical Age saw the great poets and playwrights of both tragedy and comedy. Tragedy originated in the religious drama connected with the worship of Dionysus. This is reflected in the works of Aeschylus through the recurring themes of religion and politics. The ancient world, of course, was basically theistic and theocentric, unlike the pragmatic atheism and cultural hedonism that prevails in much of modern society. Of the ninety plays Aeschylus is said to have written, only seven survive. Sophocles, his contemporary, reportedly wrote 120 plays, of which only seven also are extant.

Whereas Aeschylus and Sophocles left the issue of human suffering and justice in the mysterious realm of divine fate, a younger tragedian named Euripides dealt with an emerging national sense of justice that predicated some element of personal responsibility. Law courts in Athens were now proceeding on the assumption that guilt could not adequately be accounted for by blaming an invidious cosmic system. Euripides departed from his predecessors' preoccupation with mythology and concerned himself

more with the human drama. In Euripides' plays, even the gods were called to account for conduct unbecoming to a deity. Nineteen of the some ninety plays he is said to have written survive. The great writers of comedy during the period included Aristophanes and Menander, who brought a new sense of meaning to theater by both creating new material and parodying some of the tragedies.

The theaters in which these plays were originally performed were made of wood, but during the Classical Period stone theaters began to be erected. The Dionysus theater, the oldest theater in Greece, was located at the foot of the Acropolis in Athens. It was rebuilt in stone during the time of Alexander the Great by the Attic statesman Lycurgus (ca. 330 B.C.). Greek drama had reached its zenith by the 5th century B.C., with the works of the above-mentioned authors, and extant theaters reflect alterations required by developments in dramatic activity over two hundred years. All the surviving theaters—e.g., at Epidaurus, Corinth, Dodona, and Philippi—were built or renovated later than the composition of the plays that were performed in them. We know most about those constructed in the 4th century and later. Creative writing for the theater ceased after the 5th century, and attention was centered on the alteration of facilities.

An equal emphasis was placed on the construction of temples during this period, which saw the erection of monumental structures, such as those still standing in Athens today. The Theseion (Temple of Hephaistos and Athena), built in the Greek Agora in 449, began the period of reconstruction following the Persian Peace, which had been executed that year. On the Acropolis, the Parthenon (Temple of Athena) was erected from 447 to 438 B.C., the Temple of Athena Nike from 427 to 424, and the Erechtheion (Temple of Athena and Poseidon) some time after 395.

Some of the greatest Greek sculpture was produced during this period, one of the most significant pieces being that of the colossal bronze statue of Athena Promachos by Pheidias, which was finished in 458 B.C. and stood forty paces inside the monumental entrance to the Acropolis. Another huge chryselephantine statue of Athena by Pheidias was completed in the Parthenon in 432 B.C.

Both Socrates and Plato were products of the Classical Period. Their contribution to human thought is foundational for much of the subsequent intellectual history of the Western world. Aristotle, the pupil of Plato, became the tutor of Alexander the Great in his youth. The type of Greek culture that Alexander spread throughout his empire was learned at the feet of this teacher, whose thought continues to influence human history.

## J. The Hellenistic Period (338–146 B.C.)

In the closing years of the Classical Period, Athens, Sparta, and Thebes had all exhausted themselves trying to build empires. By 360 B.C., the balance of power politics had left Greece without a leader. The time was ripe for the emergence of a powerful unifying force. That force emerged in the person of Philip II, who became king of Macedon in 359. Macedonia was a poor and divided country when he became its ruler, but within twenty-one years he ruled the entire Balkan Peninsula. He captured the gold fields at Philippi and bought mercenary soldiers to

build an army. Among those available were 10,000 Greek mercenaries who had fought with the Persian king Cyrus in 401 in an unsuccessful attempt to overthrow Artaxerxes. When Cyrus was killed, rather than surrender they elected new generals who led them out of Mesopotamia, north to the Black Sea, and eventually home to Greece. One of these generals was Xenophon, who tells the whole story in his *Anabasis* ("Long March").

While Demosthenes, the golden orator of Athens, was warning the Athenians about the rising power in Macedonia, Philip was building his army. In one of the decisive battles of history, the Macedonians defeated Athens and Thebes, the Macedonian cavalry being brilliantly led by Philip's son Alexander. The year was 338 B.C. Two years later Philip was assassinated, and Alexander was quickly elected to succeed his father in 336.

Alexander was only twenty when he came to power; he was referred to contemptuously by Demosthenes as "the boy." Alexander immediately secured his borders and put down a revolt in Thebes, razing it to the ground. He later regretted the atrocity. However, the lesson was sufficiently clear to everyone, and by it he cowed all of Greece. He was elected, like Philip, "General of the Hellenes" at Corinth. Alexander's favorite author was Homer, and he tended to identify himself with Achilles and the spirit of the great heroes about whom Homer wrote. He thus resisted pressure by his officers to marry and provide an heir in case he should die in battle. There was little need to concern himself with affairs at home when there were worlds to conquer.

In 334 B.C., Alexander moved eastward against Persia, meeting its army at the Granicus River in N Mysia of Asia Minor. Commanding 40,000 soldiers, he defeated the Persians, but was almost killed himself. Asia Minor was his. He moved further eastward to Syria, where he met the Persian king Darius III at the Issus pass and defeated him in 333. Darius panicked and fled toward Persia, his wife and family having been captured by the Greeks. Moving south along the Levant, Alexander took the city of Tyre after a lengthy siege. The inhabitants had fled to an offshore island, and Alexander had no boats. So he took the ruins of the destroyed city and built a causeway to the island, making it forever a peninsula. Continuing southward, Alexander entered Egypt, which he "liberated" from Persian control and where he was appropriately treated as a hero. Here he built the first of his many cities named Alexandria, at the mouth of the Nile. The new city replaced Tyre as the chief port in the E Mediterranean.

Alexander refused an attempt by Darius to ransom his family and, heading east again, met the Persian army in 331 B.C. at Gaugamela, a city in Assyria on the Tigris River, 200 miles N of Baghdad. Defeating Darius again, Alexander rested his troops in Babylon for a while and then moved on southeast to conquer Susa and Persepolis. In the latter city, he burned the palace of Xerxes, the Persian king who had burned Athens. The treasury of the Persians fell into his hands, and after Darius was deposed and murdered by his own satraps in Bactria for incompetence, Alexander declared himself a successor of the Achaemenid dynasty of Persian kings and embarked on a conquest of the eastern parts of the empire.

After three years of hard battle, Alexander reached the

Indus River valley in W India and planned to go on to the Ganges, but his exhausted army refused to go any farther. So he returned to Babylon and reorganized his empire. He planned to have a link by sea with India, to circumnavigate Arabia, and possibly to conquer the western Mediterranean, but his plans were terminated by his death in Babylon. He succumbed after having lain ill with a fever for ten days. He died June 13, 323 B.C., at the age of thirty-two.

Alexander left no legitimate heir of Greek blood; his army was unwilling to accept the son, Alexander IV, whom he had sired through the barbarian Roxane. His feeble-minded half-brother, Philip III Arrhidaeus, was equally unacceptable. The first line of contenders for the throne, his senior commanders, either died or were killed. All his blood relatives were killed as well, including his son Alexander, Roxane, his mother Olympias, and his brother. A second group of contenders divided the empire among themselves, and after some conflict power was massed in three centers. Ptolemy consolidated control of Egypt, and from him arose the Ptolemies who governed Egypt until the last of them, Cleopatra, died. Antigonus II Gonatas (son of the Alexander's general Antigonus the One-eyed) took control of Macedonia and Greece, and established the Antigonid dynasty. Seleucus took the eastern satrapies in Mesopotamia, as well as Syria and parts of Asia Minor. The Seleucids established their dynasty in Antioch of Syria and ruled from there until Pompey took the area for Rome in 64 B.C.

After a considerable effort in putting down an attempt by the Macedonian rulers to regain a dominant position in Greece, an attempt which included aiding Carthage against Rome in the Punic Wars, the Roman general Mummius decimated the Macedonian army at the battle of Pydna in 168. In 148 B.C. a Roman army annexed Macedonia as a province, and in 146 another Roman army defeated the Achaean League and took S Greece. This time Mummius made an example of Corinth by slaughtering the men, enslaving the women and children, and razing the city. It would not be rebuilt for a hundred years. Greece was now firmly in the control of Rome.

During the time of the NT, Greece consisted of two large provinces: Macedonia in the N and Achaia in the S. The central section of the country was subdivided into two smaller geographical but not political districts: Epirus on the W and Thessaly on the E. A major road, the Egnatian Way, was built from Apollonia and Dyrrhachium on the W coast, cross Macedonia, through Thessalonica and Philippi to Asia. Paul traveled the road when he brought Christianity to Greece from Asia Minor. Good roads and maritime service connected the N and S parts of the country.

Macedonia had several ports on the E coast, including Neapolis, Methone, Aliko (for Pydna), and Dion. On the W coast Apollonia was served by the harbor at Aulona, and others existed along the coast as well. Achaia was accessible by sea through numerous ports along the E coast, and Athens could be reached through ports in Glifada, Phaleron, and Piraeus. The W coast of Achaia was served by several harbors, including those at Actium and Nicopolis. On the Peloponnese, there were good harbors at Lechaion and Cenchrea, which allowed Corinth to develop into a large international city. Lechaion provided access to Italy

and Europe through the Corinthian Gulf, while Cenchrea supplied an outlet eastward through the Saronic Gulf to Asia. Greece was a great maritime nation, but her sailors, unlike the Phoenicians, were not necessarily great navigators, since they were almost never out of sight of one of the more than 2,000 islands in the Aegean. Most of the important cities in Greece were built on the Aegean side of the country.

Undoubtedly the greatest contribution Greece made to the world relative to biblical studies was the spread of Hellenism throughout the Mediterranean world. The Greek language was the *lingua franca* of the empire from the time of Alexander to Constantine, replacing the Aramaic tongue used by the Persians. The Jews had translated the Hebrew Scriptures into Greek as early as the 3d century B.C. in Alexandria, and most of the Apocrypha was written in that language. Most Christians used the Greek Bible rather than the Hebrew one, because even Jewish Christians would not have been fluent in Hebrew. That is, after all, why the Septuagint was produced. All the books of the NT were apparently composed in Greek, as the more than 6,000 preserved manuscripts and pieces of manuscript testify. No ancient manuscript of a NT book has been found in Aramaic, although patristic sources state that portions of it existed in Aramaic. Greece played a vital role during that "fullness of time" (Gal 4:4), when Christianity was introduced into the world.

**GRIFFON.** See ZOOLOGY (FAUNA).

**GUARANTEE.** See DEPOSIT.

**GUARD, COURT OF THE (PLACE)** [Heb *hāšar hamattārā*]. A place within the palace complex where prisoners were confined. However, all biblical references to this place are in the book of Jeremiah, and attest to the dire circumstances at the time of the Babylonian siege of Jerusalem. Jeremiah, who was confined there (32:8, 12; 33:1; 37:21; 38:6, 13, 28; 39:14–15), nevertheless seems to have enjoyed some freedom of movement. It is possible that the court in question was only being used temporarily to house (mostly political) prisoners during times of political crisis (cf. the house of Jonathan the secretary, which was also being used to detain prisoners at the time, 37:20).

**GUARD, GATE OF THE.** See GATE OF THE GUARD (PLACE).

**GUARD, PRAETORIAN.** See PRAETORIAN GUARD.

**GULL.** See ZOOLOGY (FAUNA).

**GUNI (PERSON)** [Heb *gūnī*]. GUNITES. 1. The second of Naphtali's four sons (Gen 46:24; 1 Chr 7:13), who went into Egypt with him (Gen 46:8, 26–27), and whose family emerged as a substantial clan within the tribe by the time of the Exodus and Moses' census in the wilderness (Num 26:48). The name may be cognate with the Arabic term *jūnun*, which refers to a variety of bird (*IPN*, 230).

2. A Gadite who was the father of Abdiel and the grandfather of Ahi (1 Chr 5:15). What is not clear, however, is the connection between these three men and the other Gadites listed in 1 Chronicles 5. It may be that the three were the ancestors of Buz and his descendants (vv 12–14) and that textual corruption is responsible for the break between vv 14 and 15. It is also possible, however, that this three-name component of the Gadite genealogy is unrelated to the other names. At any rate, neither Guni nor the other Gadites in the genealogy (1 Chr 5:11–17) appear in other lists of Gadites (Gen 46:16; Num 26:15–18; 1 Chr 12:9–16—Eng 12:8–15).

3. One of David's mighty men named JASHEN (Heb *yāšēn*), who is listed in 2 Samuel 23 with the others who constituted "the three" and "the thirty," may be associated with the name "Guni." Although the MT of 2 Sam 23:32 reads "the sons of Jashen," scholars have long favored emending the text by dropping out "the sons of" (*bēnē*), arguing that the expression results from dittography after the preceding word that ends in *-bōnī*. Furthermore, since many LXX mss of 2 Sam 23:32 and its parallel in 1 Chr 12:34 call Jashen a Gunite (*ho gouni* or some variant of this spelling), it has been suggested that the MT be emended to "Jashen the Gunite." Driver (*NHT*, 371) and Elliger (1935: 53–54), however, argued that since the Gunites of Naphtali were too far removed from David in his early

days in Judah, the text should be emended to "Jashen of Gimzo." According to 2 Chr 28:18, the town of Gimzo was much closer to David's native country, only a few miles SE of Lydda/Lod. McCarter (2 *Samuel* AB, 492), however, has suggested that the text be emended to "Jashen the Gizonite," following the "Gizonite" reading of the MT of 1 Chr 11:34. In spite of the LXX's support for reading "the Gunite," McCarter believes that earlier scribes or translators confused two Hebrew letters (*zayin* and *waw*).

M. PATRICK GRAHAM

**GUR (PLACE)** [Heb *gūr*]. The name of the ascent located by (near) Ibleam where Ahaziah, king of Judah, was fatally wounded by Jehu (2 Kgs 9:27). On the analogy of Josh 10:10, it seems likely that the ascent was named after a neighboring site.

Ahaziah was fleeing S from Jezreel toward Samaria and Jerusalem. This road, leading SW to modern Jenin (the natural pass from the Jezreel valley into the Dothan valley and the Samaria mountains), is called the "road of Beth-Haggan." Knowing well the local topography, Jehu ordered the attack on Ahaziah "in the ascent of Gur, which is by Ibleam." This geographical note leaves no doubt that Gur should be located near Ibleam, well identified at Kh. Belameh (M.R. 177205), a large mound located ca. 2 km S of Beth-Haggan (modern Jenin). Eusebius also indicates that a place named Gur is located near Ibleam (*Onomast.* 72: 23–24).

Zertal has suggested identifying Gur with Kh. en-Najjar (M.R. 178205), a fortified tell of 32 dunam in area, located in the high, E side of the deep Wadi Belameh, where both the ancient and the modern roads passed. Topographically, this is the only pass between Beth-Haggan (and the Jezreel valley) and the Samaria mountains. The road there is narrow and hard, and the biblical description "ascent" (Heb *ma'āleh*) fits well the topographical conditions. Just as Kh. Belameh controls the pass from the W, Kh. en-Najjar controls it from the E. Gur is probably preserved in the 15th century B.C. Taanach letter no. 2, line 5, as Gur-ra, the place where Akhiyami informed Rewassa that "he was ambushed," confirming that the ascent of Gur was a good place for planning an ambush. Biridiyah, prince of Megiddo, attested in the Amarna letters, is also mentioned in this Taanach letter, indicating that the arena of the letter is the S part of the Jezreel valley.

According to the transcription rules, the Arabic term *Najjar* may well preserve the name "Gur" (the addition of n- prefixes is not unusual). Kh. Najjar was founded in the Chalcolithic period, but Zertal (f.c.) tends to date the fortifications to EB I–II. After a probable abandonment, the site was resettled in MB II, continuing into the LB Iron II periods. Thus, all relevant periods for the identification of "Gur-ra" and "Gur" are represented.

ADAM ZERTAL

## GURBAAL

1100 • II

**GURBAAL** (PLACE) [Heb *gur-ba'al*]. A small Arab town, against which Uzziah, king of Judah, received divine assistance (2 Chr 26:7). The LXX and Vulgate translations' "rock of Baal" suggest an original reading of *šûr ba'al* (Heb) or *tur ba'al* (Aram). Its association in the text with Meunim (Mehunim) indicates a location to the E, probably somewhere in Edom. It has been suggested that Jebel Nebi Harun, near Petra, may have been the rock of Baal, since this location appears always to have had a sanctuary on its summit. Another suggestion equates Gurbaal with the *Kr-*

*b'ṣ* of the Egyptian town lists. The precise location of this latter site is unknown at present.
